Terms of Use

These data are distributed under the following terms of use. By continuing past this page, you signify your agreement to comply with the requirements as stated below:

Privacy of Research Subjects

Any intentional identification of a research subject (whether an individual or an organization) or unauthorized disclosure of his or her confidential information violates the promise of confidentiality given to the providers of the information. Disclosure of confidential information may also be punishable under federal law. Therefore, users of data agree:

- To use these datasets solely for research or statistical purposes and not for re-identification of specific research subjects.
- To make no use of the identity of any research subject discovered inadvertently and to report any such discovery to CBHSQ and SAMHDA (samhda-support@samhsa.hhs.gov)

Citing Data

You agree to reference the recommended bibliographic citation in any of your publications that use SAMHDA data. Authors of publications that use SAMHDA data are required to send citations of their published works for inclusion in a database of related publications.

Disclaimer

You acknowledge that SAMHSA will bear no responsibility for your use of the data or for your interpretations or inferences based upon such uses.

Violations

If CBHSQ determines that this terms of use agreement has been violated, then possible sanctions could include:

- Report of the violation to the Research Integrity Officer, Institutional Review Board, or Human Subjects Review Committee of the user's institution. A range of sanctions are available to institutions including revocation of tenure and termination.
- If the confidentiality of human subjects has been violated, then report of the violation may be made to the Federal Office for Human Research Protections. This may result in an investigation of the user's institution, which can result in institution-wide sanctions including the suspension of all research grants.
- Report of the violation of federal law to the United States Attorney General for possible prosecution.
- Court awarded payments of damages to any individual(s)/organization(s) harmed by the breach of confidential data.

Definitions

Promise of confidentiality

A promise to a respondent or research participant that the information the respondent provides will not be disseminated in identifiable form without the permission of the respondent; that the fact that the respondent participated in the study will not be disclosed; and that disseminated information will include no linkages to the identity of the respondent. Such a promise encompasses traditional notions of both confidentiality and anonymity. In most cases, federal law protects the confidentiality of the respondent's identity as referenced in the Promise of Confidentiality. Under this condition, names and other identifying information regarding respondents would be confidential.

Research subject

A person or organization that participates in a research study. A research subject may also be called a respondent. A respondent is generally a survey respondent or informant, experimental or observational subject, focus group participant, or any other person providing information to a study.

Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

NATIONAL SURVEY OF SUBSTANCE ABUSE TREATMENT SERVICES (N-SSATS) CONCATENATED FILE, 1997 TO 2011

This file includes data from the 12 National Surveys of Substance Abuse Treatment Services (N-SSATS), conducted from 1997 through 2011.¹ It combines the 13 public-use files that SAMHDA currently offers into one concatenated dataset. N-SSATS was designed to collect data on the location, characteristics, and utilization of alcohol and drug treatment facilities and services throughout the 50 states, the District of Columbia, and other U.S. jurisdictions.² The Center for Behavioral Health Statistics and Quality³, Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services, plans and directs N-SSATS.

N-SSATS is designed to collect information from all facilities⁴ in the United States, both public and private, that provide substance abuse treatment. It provides the mechanism for quantifying the dynamic character and composition of the U.S. substance abuse treatment delivery system. The objectives of N-SSATS are to collect multi-purpose data that can be used to:

- Assist SAMHSA and state and local governments in assessing the nature and extent of services provided in State-supported and other substance abuse treatment facilities, and in forecasting substance abuse treatment resource requirements.
- Update SAMHSA's Inventory of Substance Abuse Treatment Services (I-SATS),⁵ which includes all known drug and alcohol abuse treatment facilities.
- Analyze substance abuse treatment services trends and conduct comparative analyses for the nation, regions, and States.

¹ In 1997 and 1998, the survey was named the Uniform Facility Data Set (UFDS). It was redesigned during 1999 and conducted as an abbreviated telephone survey that year. The survey reference date was changed between the 2000 and 2002 surveys. Thus survey data are not available for 1999 or 2001.

² The jurisdictions include American Samoa, the territory of Guam, the Federated States of Micronesia, the Republic of Palau, the Commonwealth of Puerto Rico, and the Virgin Islands of the United States.

³ Data collected from 1997 to 2009 was collected under the Office of Applied Studies. In the fall of 2010 its name was changed to the Center for Behavioral Health Statistics and Quality.

⁴ In this document, entities responding to N-SSATS are referred to as "facilities." As discussed later, a "facility" may be a program-level, clinic-level, or multi-site respondent.

⁵ In 1997 and 1998, this database was named the National Master Facility Inventory (NMFI).

- Generate the *National Directory of Drug and Alcohol Abuse Treatment Programs*, a compendium of facilities approved by State substance abuse agencies for the provision of substance abuse treatment.
- Update the information in SAMHSA's Substance Abuse [Treatment Facility Locator](http://findtreatment.samhsa.gov),⁶ a searchable database of facilities approved by state substance abuse agencies for the provision of substance abuse treatment.

DATA COLLECTION PROCEDURES FOR N-SSATS

Field period and reference dates

The field period typically lasts six months beginning on the reference date. The reference date for the years 1997, 1998, and 2000 was October 1. Beginning in 2002, the reference date has been the last business day in March. Please refer to *Survey History* and Table 1 for details about each year's field period and reference date.

Survey Universe

The universe for N-SSATS includes all active treatment facilities on SAMHSA's I-SATS at a point six weeks before the survey reference date. Facilities added by State substance abuse agencies or through annual frame enhancement or discovered during the first three weeks of the survey are also included in the survey universe for each year.

Content

N-SSATS questionnaires have been significantly revised and expanded over time with additions of major topics occurring in 2000 and 2006. Additions to topics items and slight variations in wording occurred in other years. Major topics included from 1997 through 2011:

- Facility identification information
- Facility operating entity
- Facility focus of activity
- Type of care provided
 - Hospital in-patient treatment services (inpatient treatment, inpatient detoxification)
 - Residential (non-hospital) treatment services (detoxification, short term – 30 days or fewer, long-term – more than 30 days)

⁶ <http://findtreatment.samhsa.gov>

- Outpatient treatment services (detoxification, methadone/buprenorphine/LAAM maintenance, day treatment or partial hospitalization, intensive outpatient treatment, regular outpatient treatment)
- Services offered (assessment and pre-treatment services, testing, transitional services, counseling, ancillary services, pharmacotherapies, and counseling)
- Special programs or groups provided for specific client types
- Services provided in sign language or in languages other than English
- Client hotline
- Facility funding (public funding, agreements or contracts with managed care organizations)
- Clients in treatment on reference date by type of care setting (individual services, total, clients under age 18, clients receiving methadone, and clients receiving buprenorphine (from 2005))
- Annual admissions
- Percentage of clients in treatment on the reference date for abuse of both alcohol and drugs, alcohol abuse only, and drug abuse only
- Number of beds designated for residential (non-hospital) and hospital inpatient substance abuse treatment on the reference date

Major topics added to the 2000 survey included:

- Licensure, certification, or accreditation bodies
- Payment options accepted, including use of sliding fee scale and/or treatment at no charge
- Operation of an Opioid Treatment Program (OTP) regulated by the FDA (prior to 2001) or certified by (SAMHSA (after 2001) and offering maintenance and/or detoxification with methadone and/or buprenorphine (added in 2005)

Major topics added to the 2006 survey included:

- Clinical/therapeutic approaches
- Standard operating procedures
- Detoxification from alcohol, benzodiazepines, opiates, cocaine, methamphetamine, or other drugs, and routine use of medication during detoxification
- Annual admissions funded by Access to Recovery (ATR) vouchers
- Percentage of clients in treatment on the reference date with diagnosed co-occurring substance abuse and mental health disorders

Data Collection

Two primary data collection modes were employed – a paper questionnaire sent by mail and (from 2002) a secure Web-based questionnaire. Respondents could select either method to complete the survey. Six weeks before the survey reference date, letters were mailed to all facilities to alert them to expect the survey. The letters also served to update records with new address information received from the Post Office. On the reference date, data collection packets (including the questionnaire, SAMHSA cover letter, state-specific letter of endorsement, information on completing the survey on the Web, and a sheet of Frequently Asked Questions) were mailed to each facility. During the data collection phase, contract personnel were available to answer facilities' questions concerning the survey. Web-based support for facilities completing the questionnaire on the Web was also available. Four to five weeks after the initial questionnaire mailing, thank you / reminder letters were sent to all facilities. Approximately eight weeks after the initial questionnaire mailing, non-responding facilities were mailed a second questionnaire packet. About four to five weeks after the second questionnaire mailing, non-respondents received a reminder telephone call. Those facilities that had not responded within two to three weeks of the reminder call were telephoned and asked to complete the survey by computer-assisted telephone interview (CATI).

Facility Status and Response Rate

Questionnaires were mailed to those facilities believed to be actively providing substance abuse treatment services, an average of about 17,500 facilities each survey year from 1997 through 2011. Of those facilities, approximately 12 percent each survey year were found to be ineligible for the survey because they had either closed or did not provide substance abuse or detoxification services on the reference date. Of the eligible facilities, an average of 94 percent completed the survey each survey year from 1997 through 2011. Please see Table 2 for an exact breakdown for each year.

Quality Assurance

All mail questionnaires were reviewed manually for consistency and for missing data. Calls were made to facilities to clarify questionable responses and to obtain missing data. If facilities could not be reached during the edit callbacks, responses that were clearly in error were replaced by imputation. After data entry, automated quality assurance reviews were conducted. The reviews incorporated the rules used in manual editing, plus consistency checks and checks for data outliers not readily identified by manual review. Item non-response was minimized through careful editing and extensive follow-up. The Web questionnaire was programmed to be self-editing; that is, respondents were prompted to complete missing responses and to confirm or correct inconsistent responses.

Facility Selection for Annual Report and Public Use File

The N-SSATS serves several purposes, as noted earlier. Some respondents provide information but are deemed to be out of the scope of the N-SSATS *Annual Report* and public use files. On average, 5 percent of responding facilities were excluded from the N-SSATS *Annual Report* and public use files each survey year from 1997 through 2011. The excluded facilities and reasons for exclusion fall into four categories:

- Halfway houses that do not provide substance abuse treatment. These facilities are included in the survey for listing in the *Directory* and the Treatment Facility Locator.
- Solo practitioners. I-SATS and N-SSATS are designed to include facilities rather than individuals. Solo practitioners are listed and surveyed only if the State substance abuse agency explicitly requests that they be included in the survey. Those not identified for inclusion are excluded from the *Annual Report* and public use files and from subsequent surveys.
- Jails, prisons, or other organizations that treat incarcerated clients exclusively.
- Facilities whose response indicates that their client counts are included in the counts provided by another facility and that did not report facility characteristics are excluded from facility counts, although their client counts are included in those of the reporting facility.

This concatenated file includes 173,590 records representing 31,477 individual treatment facilities. On average, each facility reported in about 6 of the 13 survey years.

Survey Response Mode

Table 3 and Figure 1. The proportion of facilities using the Web survey to respond to N-SSATS has increased steadily since introduction of the option in 2002. The Web option was introduced in a pilot test in 2000. The percentage of facilities responding via the Web has increased from 20 percent in 2002 to 79 percent in 2011. In the meantime mail response has declined from 57 percent in 2002 to 8 percent in 2011. Telephone response, which represents follow-up of facilities that have not responded by mail or Web, has slowly changed, decreasing from 23 percent in 2002 to 12 percent in 2011. Please see Table 3 for exact percentages for the response mode by year.

Figure 1. Survey Response Mode

Data Considerations and Limitations

As with any data collection effort, certain procedural considerations and data limitations must be taken into account when interpreting data.

- N-SSATS attempts to obtain responses from all known treatment facilities, but it is a voluntary survey. There is no adjustment for facility non-response (averaging 6 percent in each survey year from 1997 through 2011).
- N-SSATS is a point-prevalence survey. It provides information on the substance abuse treatment system and its clients on the reference date. Client counts do not represent annual totals. Rather, N-SSATS provides a “snapshot” of substance abuse treatment facilities and clients on an average day.
- As question wording and definitions may vary slightly from year to year, the individual questionnaires should be consulted in any analysis.

SURVEY HISTORY

N-SSATS has evolved from national survey efforts begun in the 1970s by the National Institute on Drug Abuse (NIDA) to measure the scope and use of drug abuse treatment services in the United States. The sixth of these surveys, conducted in 1976, introduced the data elements and format that have formed the core of subsequent surveys. These include organizational focus, service orientation, services available, and clients in treatment by type of care, and

inpatient/residential capacity. The 1976 survey, called the National Drug Abuse Treatment Utilization Survey, was repeated in 1977 and 1978.

In 1979, the National Institute on Alcohol Abuse and Alcoholism (NIAAA) became a cosponsor of the survey; alcoholism treatment facilities were added; and the study was renamed the National Drug and Alcoholism Treatment Utilization Survey. This survey was repeated in 1980 and 1982. In 1984, a one-page version called the National Alcoholism and Drug Abuse Program Inventory was used. In 1987, the full version of the survey was reinstated and renamed the National Drug and Alcoholism Treatment Unit Survey (NDATUS). NDATUS was conducted annually from 1989 to 1993.

In 1992, with the creation of SAMHSA, responsibility for conducting the survey shifted to SAMHSA's Office of Applied Studies. The survey was redesigned, and it was conducted annually as the Uniform Facility Data Set (UFDS) survey from 1995 to 1998. During these years, the survey was conducted by mail with telephone follow-up of non-respondents. In 1999, the survey was redesigned, and an abbreviated telephone survey of treatment facilities was conducted. In 2000, a redesigned full mail survey was reinstated with telephone follow-up; it was renamed the National Survey of Substance Abuse Treatment Services (N-SSATS). The reference date for the annual survey had always been the end of September or beginning of October. After the 2000 survey, the reference date was changed to the end of March, and no survey was conducted during 2001. In 2000, the use of an Internet-based questionnaire was tested, and beginning in 2002, all facilities were offered the opportunity to respond via the Internet.

N-SSATS IN THE CONTEXT OF DASIS

N-SSATS is one of the three components of SAMHSA's Drug and Alcohol Services Information System (DASIS). The core of DASIS is the Inventory of Substance Abuse Treatment Services (I-SATS),⁷ a continuously updated, comprehensive listing of all known substance abuse treatment facilities. The other components of DASIS are N-SSATS and the Treatment Episode Data Set (TEDS), a client-level database of admissions to substance abuse treatment. Together, the components provide national- and state-level information on the numbers and characteristics of individuals admitted to alcohol and drug treatment programs and describe the facilities that deliver care to those individuals. I-SATS is the list frame for N-SSATS. Facilities in I-SATS fall into two general categories and are distinguished by the relationship of the facility to its state substance abuse agency. These categories are described below.

Treatment facilities approved by State substance abuse agencies

The largest group of facilities (about 80 percent of all active I-SATS facilities) includes those that are licensed, certified, or otherwise approved by the State substance abuse agency to provide

⁷ Formerly named the National Master Facility Inventory (NMFI).

substance abuse treatment. State DASIS representatives maintain this segment of I-SATS by reporting new facilities, closures, and address changes to SAMHSA. Some facilities are not licensed, certified, or otherwise approved by the State agency. Some private for-profit facilities fall into this category. This group also includes programs operated by Federal agencies, the Department of Veterans Affairs (VA), the Department of Defense, and the Indian Health Service. I-SATS records for federally operated facilities are updated annually through lists provided by these agencies.

Treatment facilities not approved by state substance abuse agencies

This group of facilities (about 20 percent of all active I-SATS facilities) represents the SAMHSA effort since the mid-1990s to make I-SATS as comprehensive as possible by including treatment facilities that state substance abuse agencies, for a variety of reasons, do not fund, license, or certify. Many of these facilities are private for-profit, small group practices, or hospital-based programs. Most of them are identified through periodic screening of alternative source databases. (See “Special efforts to improve survey coverage” below.) State substance abuse agencies are given the opportunity to review these facilities and to add them to the state agency-approved list, if appropriate.

SURVEY COVERAGE

The use of I-SATS as the list frame for N-SSATS imposes certain constraints related to the unit of response and the scope of facilities included. In addition, the expansion of I-SATS in recent years to provide a more complete enumeration of substance abuse treatment facilities means that year-to-year comparisons of the numbers of facilities reporting to N-SSATS must be interpreted with caution.

Unit of response

N-SSATS is designed to collect data from each physical location where treatment services are provided. Accordingly, SAMHSA requests that State substance abuse agencies use the point of delivery of service (i.e., physical location) as the defining factor for a facility. Because of the different State administrative systems, however, there are some inconsistencies in implementation. For example, in some states, multiple treatment programs (e.g., detoxification, residential, and outpatient) at the same address and under the same management have separate state licenses. These are treated as separate by the State substance abuse agency, and are given separate I-SATS ID numbers. In other states, multiple sites are included as a single entity under a parent or administrative unit. In many of these cases, individual sites can report services data in N-SSATS, but client data are available only at a higher administrative level. Beginning in 1995, efforts have been made to identify facility networks and to eliminate duplicate reporting by networks. For most facilities, reporting level remains consistent from year to year. However, beginning in 1998, an emphasis was placed on collecting minimum information from all physical locations, and this has resulted in an increase in the number of facilities.

Special efforts to improve survey coverage

The great majority of treatment facilities in I-SATS are administratively monitored by State substance abuse agencies. Therefore, the scope of facilities included in I-SATS is affected by differences in state systems of licensure, certification, accreditation, and the disbursement of public funds. For example, some State substance abuse agencies regulate private facilities and individual practitioners while others do not. In some States, hospital-based substance abuse treatment facilities are not licensed through the State substance abuse agency.

To address these differences, SAMHSA conducted a large-scale effort during 1995 and 1996 to identify substance abuse treatment facilities that, for a variety of reasons, were not on I-SATS. Some 15 source lists were considered, and facilities not on I-SATS were contacted to ascertain whether or not they provided substance abuse treatment. As expected, this yielded a number of hospital-based and small private facilities that were not on I-SATS. (These facilities were surveyed in 1995 and 1996, but were not included in the published results of the survey until 1997.) Analysis of the results of this effort led to similar but more targeted updates before subsequent surveys. Potential new facilities are identified using data from the American Business Index and the annual American Hospital Association survey, the source lists that yielded the most new facilities in 1995 and 1996. Survey participants, who are asked to report all of the treatment facilities in their administrative networks, also identify additional facilities during the survey itself. All newly identified facilities are initially included as not approved by the state substance abuse agency. State substance abuse agencies are given the opportunity to review these facilities and to add them to the state agency-approved list, if appropriate.

Expansion of survey coverage to include all sites within networks at which treatment was provided yielded a net increase of about 2,600 facilities included in the N-SSATS *Annual Report* between 1997 and 1998. These additions were not necessarily new facilities, but were facilities not previously included in the survey as separate sites. The number of facilities reporting continued to increase in 1999, but at a slower pace, a net increase of 1,800 facilities. The increase between 1998 and 1999 was in large part because of the improved survey response rate (95 percent in 1999 vs. 90 percent in 1998). Between 2004 and 2011, the number of facilities remained constant, at between 13,300 and 13,800. In any given year, almost 90 percent of facilities responded to the prior year's survey, while 10-12 percent are new to the survey, replacing a similar number of facilities that became ineligible (closed, merged, or stopped providing substance abuse treatment) between surveys.

Data collection

Until 1996, state substance abuse agencies distributed and collected the UFDS survey forms. Beginning in 1996, data collection was centralized; since that time, SAMHSA has mailed facility

survey forms directly to and collected forms directly from the facilities, and has conducted follow-up telephone interviews with facility directors or their designee.

Non-response

Beginning in 1992, SAMHSA expanded efforts to obtain information from non-responding facilities. A representative sample of non-respondents was contacted and administered an abbreviated version of the survey instrument via telephone. In 1993 and later years, this effort was extended to all non-responding facilities. In 1997, a series of measures was introduced to enhance the survey response rate. These included advance notification and improved methods for updating address and contact information. Between 2004 and 2011, use of these methods and intensive telephone follow-up resulted in an annual follow-up rate (i.e., facilities in the sample either completed the survey or were determined to be closed or otherwise ineligible) of 94 to 96 percent.

Exclusions

In 1997, facilities offering only DUI/DWI programs were excluded; these facilities were reinstated in 1998. Facilities operated by the Bureau of Prisons (BOP) were excluded from the 1997 UFDS survey and subsequent surveys because SAMHSA conducted a separate survey of correctional facilities.⁸ During that survey, it was discovered that jails, prisons, and other organizations treating incarcerated persons only were poorly enumerated on I-SATS. Beginning in 1999, these facilities were identified during the survey and excluded from analyses and public-use data files. I-SATS and N-SSATS are designed to include specialty substance abuse treatment facilities rather than individuals. Solo practitioners are listed on I-SATS and surveyed in N-SSATS only if the state substance abuse agency explicitly requests that they be included. Beginning in 2000, halfway houses that did not provide substance abuse treatment were included on I-SATS and in N-SSATS so that they could be listed in the *National Directory of Drug and Alcohol Abuse Treatment Programs* and on the [Treatment Facility Locator](#). These facilities are excluded from analyses and public-use data files.

Changes in Survey Content

Table 4 shows the major content areas for the survey. SAMHSA has made adjustments each year to the survey design, both to minimize non-response and to include areas of emerging interest. For example, questions on the number of clients in treatment receiving buprenorphine were added in 2004. Questions about clinical/therapeutic methods, standard practices, and Access to Recovery grants were added in 2007.

⁸ SAMHSA, Office of Applied Studies. *Substance Abuse Treatment in Adult and Juvenile Correctional Facilities: Findings from the Uniform Facility Data Set 1997 Survey of Correctional Facilities*. Drug and Alcohol Services Information System Series: S-9. DHHS Publication No. (SMA) 00-3380. Rockville, MD, 2000.

There have also been changes within content areas. For example, in response to concerns about over-reporting of programs or groups for specific client types, the survey question was revised in 2003 to distinguish between those facilities that accepted specific client types and those facilities that offered specially designed programs or groups for that client type. As a result, the number and proportion of facilities offering programs or groups for each of the specified client types decreased after 2002. Surveys from 2003 and later are believed to more accurately represent the number and proportions of facilities providing programs or groups for the specified client types.

National Survey of Substance Abuse Treatment Services (N-SSATS) -- Concatenated, 1997 to 2011 Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Location: 17-18 (width: 2; decimal: 0)

Variable Type: numeric

REGION: Added: Census Region

CENSUS REGION: Geographic regions used are based on divisions used by the U.S. Bureau of Census, 1970 Census of Population. They are comprised of the following states and territories:

- U.S. TERRITORIES: American Samoa, Fed Micronesia, Guam, Palau, Puerto Rico, Virgin Islands.

- NORTHEAST: New England Division (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont) and Middle Atlantic Division (New Jersey, New York, Pennsylvania).
- MIDWEST: East North Central Division (Illinois, Indiana, Michigan, Ohio, Wisconsin) and West North Central Division (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota).
- SOUTH: South Atlantic Division (Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia) and East South Central Division (Alabama, Kentucky, Mississippi, Tennessee), and West South Central Division (Arkansas, Louisiana, Oklahoma, Texas).
- WEST: Mountain Division (Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming) and Pacific Division (Alaska, California, Hawaii, Oregon, Washington).

Location: 19-20 (width: 2; decimal: 0)

Variable Type: numeric

DIVISION: Added: Census Division

CENSUS DIVISION: Census divisions are groupings of states that are subdivisions of the four census regions. There are nine divisions, which the Census Bureau adopted in 1910 for the presentation of data. The divisions and the states included in them are:

- U.S. TERRITORIES: American Samoa, Fed Micronesia, Guam, Palau, Puerto Rico, Virgin Islands.
- NEW ENGLAND: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.
- MIDDLE ATLANTIC: New Jersey, New York, and Pennsylvania.

- EAST NORTH CENTRAL: Illinois, Indiana, Michigan, Ohio, and Wisconsin.
- WEST NORTH CENTRAL: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.
- SOUTH ATLANTIC: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.
- EAST SOUTH CENTRAL: Alabama, Kentucky, Mississippi, and Tennessee.
- WEST SOUTH CENTRAL: Arkansas, Louisiana, Oklahoma, and Texas.
- MOUNTAIN: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.
- PACIFIC: Alaska, California, Hawaii, Oregon, and Washington.

HOTYN: Basic amenities: Hotline

Does this facility operate a hotline that responds to substance abuse problems?

A hotline is a telephone service that provides information, referral, or immediate counseling, frequently in a crisis situation.

If this facility is part of a group of facilities that operates a central hotline to respond to substance abuse problems, you should mark "yes."

DO NOT consider 911 or the local police number a hotline for the purpose of this survey.

T_CLI10: Residential-Long term clients - ref date

On (REFERENCE DATE), how many clients received the following RESIDENTIAL substance abuse services at this facility?

Residential long-term treatment, similar to ASAM Levels III.3 and III.1. (Clinically managed medium- or low-intensity residential treatment, typically more than 30 days)

COUNT a client in one service only, even if the client received multiple services.

DO NOT count family members, friends, or other non-treatment clients.

Note: ASAM is the American Society of Addiction Medicine

T_CLI7: Outpatient-Detox clients - ref date

As of (REFERENCE DATE), how many active clients were enrolled in each of the following OUTPATIENT substance abuse services at this facility?

Outpatient detoxification, similar to ASAM Levels I-D and II-D. (Ambulatory detoxification)

ONLY INCLUDE clients who received treatment in (REFERENCE MONTH) AND were still enrolled in treatment on (REFERENCE DATE).

COUNT a client in one service only, even if the client received multiple services.

DO NOT count family members, friends, or other non-treatment clients.

Note: ASAM is the American Society of Addiction Medicine

TOTADMIS: Annual: Total annual admissions

In the 12 months beginning (YEAR PRIOR TO REFERENCE DATE), and ending (REFERENCE DATE), how many ADMISSIONS for substance abuse treatment did this facility have? Count every admission and re-admission in this 12-month period. If a person was admitted 3 times, count this as 3 admissions.

- FOR OUTPATIENT CLIENTS, consider an admission to be the initiation of a treatment program or course of treatment. Count admissions into treatment, not individual treatment visits.

- IF DATA FOR THIS TIME PERIOD are not available, use the most recent 12-month period for which you have data.

- IF THIS IS A MENTAL HEALTH FACILITY, count all admissions in which clients received substance abuse treatment, even if substance abuse was their secondary diagnosis.

2011	17,376	12.4%	15,222	14,302	94.0%	582	13,720

¹The percent closed/ineligible is derived from the total facilities eligible divided by the total forms mailed.

²The final response is derived from the total completed surveys divided by the total facilities eligible.

³N-SSATS serves multiple purposes, and completed surveys for some categories of facilities are deemed out of scope for the Annual Report and data file, although their information is used for other purposes. These include halfway houses that do not

provide treatment, solo practitioners, and facilities reporting incarcerated clients only. Facilities whose client counts were reported by another facility and who did not provide client characteristics are also excluded from the Annual Report and data file.

TABLE 3: SURVEY RESPONSE MODE

<u>YEAR</u>	<u>PHONE</u>	<u>MAIL</u>	<u>WEB</u>
1997	18%	82%	N/A
