NHSDA 1997:
National Household Survey on Drug Abuse

Processor Note on Version 1

1) Paragraph 1 of the portable document format (PDF) codebook introduction refers to the original SAS Windows system version of the public use data file that was archived prior to processing. To provide the data to users in a format that is neither system- nor platform- specific, the data file is in ASCII text format with SAS and SPSS data definition statements.

2) Variables ending in ...NEWA through ...NEWE (e.g., HALNEWA) represent written responses to open-ended questions regarding use of specific drugs. This resulted in some instances of incorrectly classified drugs.

3) IRHSGRAD (high school graduation variable) does not distinguish between respondents aged 12-17 years and those 18 and older. Accordingly, most respondents aged 12-17 years are included in the "No" category.

Processor Note on Version 3

1) Modified value labels and missing values for variable GQTYPE to correct previous errors. The variable CASEID was also added to the dataset.

INTRODUCTION AND DESCRIPTION OF THE 1997 NATIONAL HOUSEHOLD SURVEY ON DRUG ABUSE

Introduction

This codebook provides documentation for the 1997 National Household Survey on Drug Abuse (NHSDA) public use file. The 1997 NHSDA public use file has been prepared for use with the Statistical Analysis System (SAS) as a SAS dataset. The variable names in this codebook are the SAS variable names that appear in the dataset. The public use file is provided to users on CD-ROM.

For each variable on the 1997 public use file, this codebook provides the SAS variable name, a description of the variable, the interview instrumentation source, value codes and their meanings, and a univariate frequency distribution. Most of the variables originated as questionnaire or answer sheet items. For created variables, the source variables and recoding specifications are provided, if space allows. In addition, case identification, sampling, and data collection variables are included on the file and documented in this codebook. In 1994, a revised questionnaire and editing methodology was introduced. A split sample design was implemented with a sample of 4,372 persons using the old questionnaire (1994-A) and 17,809 persons using the new questionnaire (1994-B). Because of these changes, the estimates produced from the 1997 survey (which uses the same questionnaire and the estimate methodology as the 1994-B, 1995 and 1996 surveys) are not comparable to those produced from the 1994-A and earlier surveys.

Overview of the NHSDA

The 1997 NHSDA is the seventeenth in a series, the primary purpose of which is to measure the prevalence and correlates of drug use in the United States. This survey provides information about the use of illicit drugs, alcohol, and tobacco among members of the non-institutionalized U.S. civilian population aged 12 and older. Surveys have been conducted periodically since 1971, with the most recent ones in 1979, 1982, 1985, 1988, 1990, 1991, 1992, 1993, 1994, 1995, and 1996. Currently, public use files are available for 1979, 1982, 1985, 1988, 1990, 1991, 1992, 1993, and 1994-A (old questionnaire) and 1994-B (new questionnaire), 1995, 1996, and 1997.

The target population for the 1997 survey is the same as has been defined since the 1991 NHSDA: the civilian, non-institutionalized population of the 50 United States (including civilians living on military bases) who are 12 years of age and older.

Before 1991, the NHSDA sample was drawn from the household population of the contiguous 48 states. Alaska and Hawaii were added to the sample population in 1991, as were residents of non-institutional group quarters (e.g., college dormitories, group homes, civilians dwelling on military installations) and persons with no permanent residence (homeless people in shelters and residents of single rooms in hotels). In addition, six special-interest metropolitan statistical areas were oversampled. New questions were added in 1991 to collect data on treatment for drug use, illegal activities, and use of anabolic steroids; and the sets of questions about insurance and personal and family income sources and amounts were expanded. The 1992 and 1993 NHSDAs retained these innovations and were also designed to provide quarterly as well as annual estimates.

Although the design of the NHSDA has preserved continuity in assessing drug use throughout the survey series, it has been sufficiently flexible to permit implementation of special procedures and examination of special topics. In 1979, respondents from rural areas were oversampled, and since 1985, blacks and Hispanics have been oversampled to increase the reliability of estimates of drug use in these

important groups. Since 1988, additional information has also been gathered about the form of cocaine known as 'crack' and about sharing needles for injection of drugs. Also, the consequences of use of various drugs have been given considerable attention since 1985. In 1994, two questionnaires were used: the old questionnaire which retained all the core questions from the previous surveys, and the new questionnaire in which new questions on access to care and mental health were introduced. The 1994 survey also included a rural supplementary sample to obtain substance abuse prevalence estimates for rural areas in the United States. The 1995 NHSDA questionnaire retained the new questions on mental health and access to care which were introduced in the 1994-B (new questionnaire); questions on needs for treatment for drug or alcohol use and questions about criminal records were included under special topics. In 1996, the risk/availability of drugs section was re-introduced; and sections on driving behavior and personal behavior were added. The 1997 questionnaire continued the risk/availability section along with new items about use of cigars, people present when respondents used marijuana or cocaine for the first time (if applicable), reasons using marijuana or cocaine the first time, reasons for using marijuana or cocaine in the past year, reasons for discontinuing use of these two drugs (for lifetime but not past year users) and reasons why respondents never used these two drugs. In addition, a new series of questions were introduced that were asked only of youthful respondents aged 12 to 17. These covered a variety of topics relevant to the lives and perceptions of young respondents that may be associated with substance use and related behaviors. A description of the 1997 survey, including more detailed information on sample issues, can be found in the following NHSDA reports:

> National Household Survey on Drug Abuse: Main Findings 1997. This report provides information on the prevalence of use and information on demographic correlates of use, frequency of use, patterns of use, problems from use, and perceptions of risk of use of illicit drugs, alcohol, and tobacco (DHHS Publication No. (SMA) 99-3295).

> Preliminary Results from the 1997 National Household Survey on Drug Abuse. This report presents in tabular, graphical, and narrative bullet formats some key findings on illicit drug use prevalence by age and major demographic variables in 1997, and relative to other years (DHHS Publication No. (SMA) 98-3251).

Strengths and Limitations of the NHSDA

The NHSDA is the only study that regularly produces estimates of drug use among civilian members of the non-institutionalized population in the United States. The survey is an appropriate technique for estimating prevalence rates for use of different drugs because much drug use would not ordinarily come to the attention of administrative, medical, or correctional authorities and therefore would not be included in official statistics. In-person interviews with a large national probability sample seem to be the best way to estimate drug use in virtually the entire population of the United States.

Although the NHSDA is useful for many purposes, it has certain limitations. First, the data are self-reports of drug use, and their value depends on respondents' truthfulness and memory. Although some experimental studies have established the validity of self-reported data in similar contexts and the NHSDA procedures were designed to encourage honesty and recall, some under- and over-reporting may have taken place. Second, the survey is cross-sectional rather than longitudinal. That is, individuals were interviewed only once and were not followed for additional interviews. The surveys, therefore, provide an overview of

the prevalence of drug use at specific points in time rather than a view of how drug use changes over time for specific individuals. Third, because the target population of the survey is defined as the non-institutionalized civilian population of the United States, a small proportion (slightly less than 2%) of the population is excluded. The subpopulations excluded are members of the active duty military and persons in institutional group quarters (e.g., hospitals, prisons, nursing homes, treatment centers). If the drug use of these groups differs from that of the non-institutionalized civilian population, the NHSDA may provide slightly inaccurate estimates of drug use in the total population. This may be particularly true for prevalence estimates for rarely used drugs such as heroin.

Survey Methodology

The respondent universe for the 1997 NHSDA was the civilian, noninstitutionalized population age 12 years and older within the United States, including residents of noninstitutional group quarters (e.g., shelters, rooming houses, dormitories) as well as residents of civilian housing on military bases. Persons excluded from the universe include those with no fixed address, residents of institutional quarters (such as jails and hospitals), and active military personnel. The survey used basically the same multistage area probability sample design that has been employed since the 1988 NHSDA. This design uses a composite size measure methodology and a specially designed within-dwelling selection procedure to ensure that desired sample sizes are achieved for subpopulations defined by age and race/ethnicity. Oversampling was used to meet specified precision constraints for those subpopulations. Since the 1988 survey, the NHSDA has oversampled Hispanics in areas of high Hispanic concentration to reduce survey costs. Unlike the 1993, 1994, and 1995 NHSDAs, the 1996 and 1997 NHSDAs did not oversample cigarette smokers age 18-34. A design feature of the 1996 NHSDA is the overlap with segments previously surveyed in the 1995 NHSDA. About 95% of 1995 sample segments were screened again in 1996 to identify and sample occupied dwelling units in these segments that had not previously been interviewed in the 1995 NHSDA. The reuse of 1995 NHSDA segments reduced the overall costs of counting and listing dwelling units in the 1996 NHSDA and also modestly increased the precision of comparisons between the 1995 and 1996 NHSDAs. Unlike the 1996 NHSDA, the 1997 basically surveyed a new segment sample. It was necessary to add 1,844 new national sample segments within the 1996 primary sampling units (PSUs) because many of the 1996 segments, most of which also had been used for the 1995 study, were not sufficient in size to accommodate another sample for 1997. Only 96 segments in the 1997 NHSDA overlapped with 1996 segments.

In addition to national estimation provided by the 1997 NHSDA, at a later stage of designing the survey, State-level estimation was needed for Arizona and California. Hence, beginning in quarter two of the 1997 NHSDA, residents of Arizona and California were oversampled to provide direct survey estimates for these states. Due to confidentiality concerns, there is no variable on this file to indicate a state identifier. Estimates for Arizona and California can be obtained from SAMHSA. In addition, a more detailed report on the results of the Arizona and California samples will be published by SAMHSA later this year.

As in previous NHSDAs, the basic sample design of the 1997 NHSDA involved five selection stages: the selection of primary sampling units (e.g., counties) the selection of subareas (blocks or block groups) within PSUs, the selection of listing units (housing units or individual dwelling units within non-institutionalized group quarters that are occupied by one or more civilians) within these subareas, the selection of age domains (age groups 12 to 17, 18 to 25, 26 to 34, 35 to 49, and 50 and older) within sampled listing units, and the selection of eligible individuals within the sampled age domains. The following sections describe these selection stages. A more complete description of the sample design can be found in the 1997 *Methodological Resource Book* (available from the Office of Applied Studies, SAMHSA).

Selection of Primary Sampling Units

The 1997 NHSDA used the same 115 PSUs as the 1995 and 1996 NHSDAs, plus a total of 18 supplemental PSUs from Arizona and California. These 115 PSUs were selected to represent the nation's total eligible population, including areas of high Hispanic concentration. The PSUs were defined as metropolitan areas, counties, groups of counties, and independent cities. The 115 PSUs comprise 43 certainty PSUs and 72 noncertainty PSUs. The 43 certainty PSUs are metropolitan areas with high Hispanic concentration that have been included in the NHSDA with certainty since 1988. The 72 noncertainty PSUs were selected with probability proportional to size (PPS) and minimal replacement to represent the balance of the nation outside the 43 certainty PSUs. The national sample was supplemented by a PPS selection of 14 noncertainty PSUs from Arizona plus four noncertainty PSUs from California. Because the national sample provided representation for certainty PSUs in each state, no additional certainty PSUs were added to either sample.

The segments that formed the 43 certainty PSUs were partitioned into five strata:

- Stratum 1: High-Concentration Hispanic area segments. These segments had 71 percent or more Hispanics according to the 1990 Census.

- Stratum 2: Moderate-Concentration Hispanic area segments. These segments had between 20 percent and 71 percent Hispanics according to the 1990 Census.

- Stratum 3: Low-Concentration Hispanic area segments. These segments had less than 20 percent Hispanic but more than 2 percent combined Hispanic and non-Hispanic black population according to the 1990 Census, and furthermore included fewer than 70 percent non-Hispanic black population according to the 1990 Census.

- Stratum 4: High-Concentration Black area segments. These segments had fewer than 20 percent Hispanic but more than 2 percent combined Hispanic and non-Hispanic black population according to the 1990 Census, and furthermore included at least 70 percent non-Hispanic black population according to the 1990 Census.

- Stratum 5: High-Concentration White area segments. These segments had 2 percent or less combined Hispanic and non-Hispanic black population according to the 1990 Census.

To complete the stratum definitions for the remainder of the national study, an initial global noncertainty stratum was created for the residual portion of the United States and defined as:

- The initial noncertainty stratum representing the balance of the Nation.

At the final two stages of within-segment dwelling unit person sampling, segments in the noncertainty stratum for the national study were later partitioned into five substrata to improve the efficiency of the design by reducing the size of the screening sample.

An optimal allocation procedure was used in 1997 to allocate the sample to the six strata listed above. The results of the allocation suggested that total survey costs would be minimized for fixed precision when Hispanics were oversampled in the strata in which they were concentrated. Once sufficient screening interviews were conducted to identify the required number of Hispanic dwellings, more than enough non-Hispanic black and non-Hispanic non-black dwellings would be identified so that these interviews could be proportionally allocated to strata. For the Arizona/California supplement, there was no oversampling of Hispanics because each State's Hispanic allocation in the national study component was large enough to satisfy State-level precision requirements. Consequently, the three racial/ethnic groups were sampled in the supplement so that the combined national study and supplemental samples would result in a proportionally allocated sample.

The 43 certainty PSUs contained about 80 percent of the Hispanic population in the United States, according to the 1990 Census. They also contain approximately 50 percent of the non-Hispanic blacks and about 40 percent of the non-Hispanic non-blacks in the United States. The segments of Stratum 1 have about 81 percent Hispanic dwellings on average and contain about 24 percent of the U.S. Hispanic population. The segments of Stratum 2 have about 32 percent Hispanic dwelling units and contain about 35 percent of the U.S. Hispanic population. The segments of Stratum 3 have about 5 percent Hispanic dwelling units and contain about 18 percent of the U.S. Hispanic population.

The remaining 72 noncertainty PSUs were selected from the noncertainty stratum. The noncertainty PSUs were selected with probability proportional to a composite size measure. The composite size measure was defined as the sum of racial/ethnic group dwelling counts weighted by the specified racial/ethnic sampling rates. This selection scheme allowed for targeting particular racial/ethnic subpopulation sample sizes. Chromy's (1979) probability minimum replacement sequential sampling scheme was used to select these 72 PSUs with probabilities proportional to their composite size measures. The use of a composite size measure ensured, 1) roughly equal sample sizes per sample subarea (the second-state unit of selection) and 2) roughly equal probabilities of selecting eligible individuals (the fifth- or final-stage unit of selection) within race/ethnicity, and age group.

A State-supplementary sample large enough to provide reliable estimates for Arizona and California was selected to participate in quarters 2 through 4 of the 1997 NHSDA. The certainty PSUs included in the supplement also were included in the national study. This supplement consisted of no additional certainty PSUs because a representative certainty-PSU sample from both States was already participating in the national study.

The same first-stage sampling frame used for the noncertainty national sample also was the basis for selecting an independent supplement of 14 PSUs from Arizona and 4 PSUs from California. Because the noncertainty counties in Arizona were large geographically relative to population density, the counties representing the residual outside the certainty counties in Arizona were subdivided into smaller areas (Census tracts). Groups of these tracts satisfying a minimum population size requirement were defined as PSUs so that data collection would be more manageable. For the noncertainty California PSU sample, no subdivision of counties was necessary; hence, each noncertainty-county comprised a single PSU.

Selection of the Second-Stage Sample: Subareas within PSUs

Unlike the 1996 NHSDA, which used virtually the same segments surveyed in the 1995 NHSDA, the 1997 NHSDA basically surveyed a new segment sample. Approximately 95% of the 1997 sample, or 1,844 segments, consisted of the previously unused units of the pairwise sample that was selected at the same time the 1995 and 1996 segment samples were selected. The remaining 5% or 96 segments, overlapped with the 1996 survey year.

Both the 1995 and 1996 sample subareas and the new subareas selected in 1997 were drawn from the 1990 Census. Within each sample PSU, subareas were defined by combining adjacent blocks to create non-overlapping area segments that contained at least 90 occupied dwellings. The sample segment size allocations, based on optimal allocation and the expected precision requirements of individual strata, are given in Table 1 for each stratum. These allocations assumed that about nine interviews would be completed per sample segment.

The area segments from each stratum of each of the PSUs were selected with probabilities proportional to a size measure. For each stratum, a composite size measure was defined to equal a weighted sum of the numbers of Hispanic, non-Hispanic black, and non-Hispanic nonblack dwelling units with weights proportional to the desired racial/ethnic sampling rates. Segments within the national Strata 1 to 5 were sorted to implicitly stratify the sampling frame to reduce sampling variability and to control the distribution of the sample. To reduce screening costs, the subareas of the initial national noncertainty stratum were partitioned into three noncertainty substrata–high black, high white, and remainder–based on 1990 Census block data, and the selection of sample subareas was carried out separately within these three substrata.

Selection of the Third-Stage Sample: Listing Units within Subareas

Projections indicated that screenings had to be completed for approximately 80,000 dwelling units in order to identify sufficient dwelling units to yield Hispanic and non-Hispanic black age-domain samples of the desired size. Assuming an average 93 percent screening completion rate and a projected average 84 percent listing unit eligibility rate implied that approximately 101,000 listings had to be selected for both study components. A listing unit was ineligible for the study if it was (a) vacant; (b) a vacation, second, or temporary home; (c) not a dwelling unit; (d) a military facility whose occupants were only military personnel; or (e) an institutional housing facility.

Dwelling unit listings were selected using systematic sampling. The sampled listings were then sent to the field for screening. After first determining that a sampled listing was eligible for the study, the interviewer completed a dwelling roster that listed all residents age 12 and older with their age, and race/ethnicity. This roster formed the basis for the within-dwelling sampling of individuals.

Within-Dwelling Unit Sampling

The 1997 NHSDA used basically the same within-dwelling unit sample selection approach that has been applied since the 1988 NHSDA, except that, unlike the 1993 through 1995 NHSDAs, the 1996 and 1997 NHSDA did not use smoking status as a within-dwelling unit sampling criterion. Following the third-stage sampling, interviewers screened each sampled dwelling unit. Based on the screening the dwelling was classified according to the race/ethnicity of the head of the dwelling. The interviewers also determined the age domains represented by individuals residing in the dwelling in terms of presence of absence of individuals age 12 to 17, 18 to 25, 26 to 34, 35 to 49, and 50 and older. Interviewers were provided a mechanism for selecting none, one, or two age domains and, subsequently, one sample person from each selected domain. The age domain selection probabilities were based on the desired sample sizes for each age group by racial/ethnic domain. If a dwelling unit contained two or more individuals in the same age domain, the probability of selecting a particular individual was based on the number of individuals in the age domain. In some instances, two individuals, usually one 12- to 17-year-old and one adult, were selected from the same dwelling unit.

Data Collection and Response Rates

The fieldwork for the 1997 NHSDA was directed by senior staff members at Research Triangle Institute (RTI). A total of 24,505 completed interviews was obtained for the 1997 survey. A completed interview had to contain, at a minimum, data on the recency of use of marijuana, cocaine, and alcohol.

Strategies for ensuring high rates of participation resulted in an interview response rate of 78.3% for the 1997 survey. Of the 24,505 completed interviews, 13,607 were with whites and other (i.e., non-Hispanic, nonblacks), 4,639 were with non-Hispanic blacks, and 6,259 were with Hispanics. These completed interviews represented a 85.0% completion rate for screening sample households and a 92.7% rate for screening eligible households. The response rates for these three racial/ethnic groups were 75.5% for whites and others, 81.8% for blacks, and 82.5% for Hispanics.

Throughout the course of the study, the respondent's anonymity and the privacy of his or her responses were protected by separating identifying information from survey responses. Respondents were assured that their identities and responses would be handled in the strictest compliance with Federal law. The questionnaire itself and the interviewing procedures were designed to enhance the privacy of responses, especially during segments of the interview in which questions of a sensitive nature were posed. Respondents were asked to mark answer sheets to record their responses to questions read aloud by the interviewer. The interviewer did not see the completed answer sheets.

Weighting Procedures

$$\sum_i w_i = \textit{Size of target population,} \qquad (1)$$

The estimates of this report are based on sample survey data rather than on complete data for the population. This means that the data must be weighted to obtain unbiased estimates for drug use in the population represented by the 1997 NHSDA. The 'final sampling weight' of the ith respondent, say w_i, can be interpreted as the number of persons in the NHSDA target population that are represented by the ith respondent. The sum of the weights over all respondents estimates the size of the total target population, i.e., where the summations is over all NHSDA respondents in the 1997 NHSDA.

The 'basic sampling weights' for the 1997 NHSDA are equal to the inverse of the probabilities of selection of sample respondents. In other words, the smaller a respondent's chance of entering the sample, the larger the weight of that respondent in the calculation of unbiased estimates for the target population. The probability of selection of a respondent can be computed as the product of five stagewise sampling probabilities. The probability of selecting respondent I equals the product of 1) the probability of selecting respondent I's PSU, 2) the probability of selecting respondent I's subarea given selection of her PSU, 3) the probability of selecting respondent I's dwelling unit given selection of her subarea, 4) the probability of selecting age groups within dwelling units, and (5) the probability of selecting respondent I given selection within sampled age group.

To obtain the 'final NHSDA weights,' the 'basic sampling weights' were adjusted to take into account dwelling unit-level and individual-level nonresponse and subsampling of individuals within dwelling units and further adjusted to ensure consistency with intercensal population projections obtained from the U.S. Bureau of the Census. The weight adjustments in the 1997 NHSDA were similar to the weight adjustments that were applied in previous NHSDAs.

Contents and Organization of the 1997 NHSDA Public Use File

Data File Description

The file described here has been recorded on a compact disc as a SAS dataset in PC-format. The dataset has these characteristics:

Internal SAS name	PUF97
SAS version	6.12
Number of observations	24,505
Number of variables	1,421

The overall organization of the file is shown in the Table of Contents of this document. Edited data from the questionnaire and drug answer sheets make up the first portion of the file. These variables contain missing data; see the section on 'Standard code Conventions' below for a description of the codes given to different types of missing data. The number of observations for which data are missing for any given variable is shown in the entry for that variable.

Imputation-revised demographic and drug use variables and recoded versions of these variables are given in the next four sections of the file. These variables include indicators for lifetime, past year and past month substance use, as well as imputation-revised demographic variables such as age, race/ethnicity, education, employment and income. Missing values for these variables have been imputed using the statistical imputation procedures described below. Imputation indicators are provided for each variable so that users may easily determine whether an observation contains data from the questionnaire or an imputed value. Users who wish to replicate results published in the *National Household Survey on Drug Abuse: Main Findings 1997* (DHHS Publication No. (SMA) 99-3295) or other SAMHSA reports should use the 1997 NHSDA imputed data for prevalence estimates rather than raw data from the questionnaire or drug answer sheets.

Many of the remaining variables in the 1997 file are recoded or logically imputed variables created for the prevalence section of the National Household Survey on Drug Abuse: Main Findings 1997. These variables include recodes of questionnaire and imputation revised drug variables, and logically imputed variables and recoded versions of logically imputed variables pertaining to drug use problems, symptoms of dependency and negative drinking experiences.

Variables containing the original responses to recency-of-use questions are presented in a section called 'Selected Unedited Variables.' These are included to show the recency data actually collected before the responses were edited based on evidence of use found elsewhere in the questionnaire.

Variable Naming Conventions

Variable names are mnemonics related to the meaning of each variable. Insofar as possible, variables identical to those in the 1985, 1988, 1990, 1991, 1992, 1993, 1994-A, 1994-B, 1995, and 1996 NHSDA analytical files have also been named identically. However, the user should refer to the questionnaires and previous codebooks to verify that the data are exactly comparable.

Imputations

For selected key variables, response data were changed to reflect more recent use or missing data were replaced with nonmissing values. The two different imputation procedures used are distinguished in

this codebook by the code-value descriptive phrases '...LOGICALLY IMPUTED' and '..imputed' or by the designation 'IMPUTATION-REVISED' in the variable label.

Logical imputation was carried out in the earliest stage of editing for the original drug recency-of-use variables. This procedure involved checking, for each recency-of-use variable, other variables in the same answer sheet only that could yield evidence of use of that specific subject drug or class of drugs. Then the most recent indication supplied by the respondent of use of that drug replaced missing data in the subject drug recency-of-use variable or was used to change a less recent response value to a value reflecting the indication elsewhere of more recent use. Unique code values (7, 8, or 9) were assigned to the recency-of-use variable when such logical imputation occurred; these code values are readily identifiable by the phrase '...LOGICALLY ASSIGNED' in the code-value descriptions. For those recency-of-use variables with missing data for which no indication of use of the drug could be found by examination of all relevant variables in the same answer sheet, a code value of 91 (Never used) was assigned if there were one or more indications of such nonuse in the set of relevant variables. The recency-of-use variables for which logical imputation was implemented are CIGREC, ALCREC, SEDREC, TRANREC, STIMREC, ANALREC, MJREC, INHREC, COCREC, CRAKREC, HALLREC, PCPREC, HERREC, SNUFREC, PCPREC, and LSDREC.

At this point in the editing process, a determination was made as to whether each record in the database contained enough information to be considered complete. To be classified as a minimally complete case, and thus to be retained in the database, data on the recency of use of alcohol, marijuana, and cocaine had to have been provided by the respondent or logically imputed from other answers supplied by the respondent.

For selected variables of interest, statistical imputation was done following logical imputation in order to replace missing responses with statistically imputed responses. Most of the recency-of-use variables (except for alcohol, marijuana, and cocaine recency-of-use), cigar use, age, race, gender, Hispanic-origin variables, marital status, work status, education, high school graduate indicator, and total and private health insurance were imputed by using a technique known as hot-deck imputation (using various sorts and classing variables). The personal and family income variables, as well as the past 12 month alcohol, marijuana, and cocaine frequency-of-use variables, were imputed using regression based methods. Variables in this database for which the imputation procedures were implemented may be identified by the designation 'IMPUTATION-REVISED' in the variable label and their variable names begin with the letters IR. In addition, for each imputation-revised variable, there is an 'IMPUTATION INDICATOR' variable whose values distinguish whether the imputed variable's value originated from interview responses or were imputed.

In general, analysts are advised to use the imputation-revised variables for tabular summaries and other descriptive analyses. For analyses of relationships where multiple data items are involved, use of these imputation-revised variables may not be appropriate. Usually these analyses span data items that were not jointly used in defining the imputation procedure (either as the output variable or as a classing or sorting variable). In this situation, use of nonimputed data items may be best.

Standard Code Conventions

Generally, the following codes have the same (or consistent) meanings across all variables (exceptions are noted in the documentation for individual variables).

91 or 991 or 9991, etc. = Never used the substance

92 or 992 or 9992, etc. = Response illegible

93 or 993 or 9993, etc. = Did not use drug under conditions in the question (e.g., during time period)

94 or 994 or 9994, etc. = Don't know

95 or 995 or 9995, etc. = Bad data (usually, inconsistent with other data)

96 or 996 or 9996, etc. = Multiple response

97 or 997 or 9997, etc. = Refusal

98 or 998 or 9998, etc. = Blank (not answered)

99 or 999 or 9999, etc. = Legitimate skip

Most logically edited changes resulted in the assignment of the following codes whose meanings are equivalent to the standard codes above.

81 or 981 or 9981, etc. = Never used the substance LOGICALLY ASSIGNED

83 or 983 or 9983, etc. = Did not use drug under conditions in the question (e.g., during time period) LOGICALLY ASSIGNED

85 or 985 or 9985, etc. = Bad data (usually, inconsistent with other data) LOGICALLY ASSIGNED

89 or 989 or 9989, etc. = Legitimate skip LOGICALLY ASSIGNED.

Variables from the SPECIAL DRUGS, DRUGS, TREATMENT, and DRUG EXPERIENCES answer sheets were not edited to be made consistent with any drug recency-of-use variables. However, editing was conducted to ensure consistency within each of these answer sheets' own set of variables. It should be noted that as a result of not editing across answer sheets drug-use variables from the SPECIAL DRUGS (answer sheet #13), DRUGS (answer sheet #15), TREATMENT (answer sheet #17), and DRUG EXPERIENCES (answer sheet #19) modules may be inconsistent with the edited recency-of-use variables. In this codebook, variables from these 4 answer sheets that might be inconsistent with a drug's recency-of-use variable are denoted with an asterisk (*) at the beginning of the variable label.

Variance Estimation and Design Effects

Statistical Significance of Differences

This section describes methods used to compare prevalence estimates. Customarily, the observed difference between estimates is evaluated in terms of its statistical significance. 'Statistical significance' refers to the probability that a difference as large as that observed would occur due to random error in the estimates if there were no difference in the prevalence rates for the population groups being compared. In chapter 2 of the Main Findings 1997 report (available from the Office of Applied Studies), comparisons were made between estimates in the 1996 NHSDA survey and the 1997 survey and between estimates within the 1997 survey. The significance of observed differences is reported at the 0.05 and 0.01 levels. However, the reader may wish to compare prevalence estimates from two groups for which the significance of the difference is not reported.

To compare the prevalence of drug use for the 1996 versus 1997, once can test the hypothesis of no difference in prevalence rates using the standard difference in proportions test, expressed as

$$Z = \frac{p1 - p2}{\sqrt{var(p1) + var(p2) - 2cov(p1,p2)}}$$

where

p1 = 1996 estimated proportion

var(p1) = variance estimate for p1

p2 = 1997 estimated proportion

var(p2) = variance estimate for p2

cov(p1,p2) = covariance between p1 and p2

Under the null hypothesis of no difference in prevalence rates, Z is asymptotically distributed as a normal random variable; calculated values of Z can, therefore, be referred to the unit normal distribution to determine the corresponding probability level (i.e., p value). Because the 1996 and 1997 NHSDAs were overlapping, including a high percentage of the same sample segments, the covariance term in the formula for Z is greater than zero in comparisons of the 1996 and 1997 surveys.

For comparing prevalence estimates within the same survey, the same Z statistic quoted above can be used. The covariance term in the formula for Z may be positive under many shared sample conditions in the multi-stage sample design.

Sample Design Effects and Generalized Standard Errors

This section describes methods for approximating sampling variability by computing generalized standard errors. (The standard error estimate is the square root of the variance estimate.)

The best variance estimation approach is to use commercially available variance estimation software packages, such as the Research Triangle Institute (RTI) SUrvey DAta ANalysis or SUDAAN package (Shah, Barnwell, & Bieler, 1997). Most packages compute variance estimates for means, percentages, and other statistics based on first-order Taylor Series approximation of the deviations of estimates form their expected values.

For use with software such as SUDAAN, two variables were created: VESTR and VEREP. The sampling design used to select the NHSDA results in a deeply stratified sample. Therefore, adjacent strata are collapsed into pairs to create pseudo-strata (VESTR) with two replicates each (VEREP). For all non-certainty strata, the PSU's (each of which represents an implicit stratum(are grouped into pairs based on their sequential order of selection. Each pair of PSUs defines a pseudo-stratum (VESTR) with two replicates (VEREP). For the certainty portion of the sample, segments represent the first stage of sampling. Each explicit design stratum is partitioned into groups of approximately 24 segments based on order of selection (e.g., about the size of a non-certainty pseudo-stratum). These sets of approximately 24 segments define pseudo-strata (VESTR) for analysis purposes. The segments are then paired in selection order within each

certainty pseudo-stratum. One segment from each pair is randomly assigned to replicate 1 and the other segment to replicate 2 (VEREP).

Standard errors have been computed using SUDAAN for all parameter estimates appearing in the 1997 Main Findings report and are available from the Office of Applied Studies (OAS) upon request. Given below is an example using SUDAAN to calculate the estimated number and percent of lifetime marijuana users by sex and race/ethnicity within age group. The input data file must be sorted by VESTR and VEREP.

```

```

Whenever possible, estimates generated by a software package such as SUDAAN should be used to compute confidence intervals and perform statistical comparisons. However, it is the goal here to provide future users of the 1997 NHSDA data base with approximate standard error estimates for situations in which such computation of NHSDA standard error estimates is not possible.

Two approaches for approximating standard error estimates are presented in this section. The first uses median domain design effects. The second is based on a prediction equation obtained from modeling design effects. These alternatives to the published standard error estimates are described below.

Median Design Effects

The design effect is the ratio of the design-based variance estimate divided by the variance estimate that would have been obtained from a simple random sample of the same size. Therefore, the design effect summarizes the effects of stratification, clustering, and unequal weighting on the variance of a complex sample design. Because clustering and unequal weighting are expected to increase the variance, the design effect should virtually always be greater than one.

Design effects were frequently less than one for prevalence rates near zero. Because these values were considered spurious, another design effect estimate based only on stratification and unequal weighting effects was substituted if it was greater than the total design effect. Moreover, if both design effect estimates were less than one, a value of one was substituted.

For the 1997 NHSDA, the median design effects were based on estimates from:

- ***15 illicit drug use categories:*** any illicit drug use; marijuana/hashish; cocaine; crack; inhalants; hallucinogens; lysergic acid diethylamide (LSD), PCP; heroin; nonmedical use

of any psychotherapeutic; nonmedical use of stimulants; nonmedical use of sedatives; nonmedical use of tranquilizers; nonmedical use of analgesics; any illicit drug except marijuana;

- ***3 licit drug use categories:*** cigarettes; alcohol; and smokeless tobacco;

for each of

- ***3 recency-of-use categories:*** ever used; used in past year; used in past month.

The estimates of past month heavy drinking and binge drinking also were included in the licit drug use category, bringing the total number of estimates used for median calculation to 56.

For each specified domain within the 1997 NHSDA, a median design effect was calculated from the above estimates as opposed to calculating an average design effect. Because extreme values of some design effects would have distorted the associated averages, medians were chosen to provide a better measure of the central value. The domains were defined by cross-classifications of age and race/ethnicity by gender, race/ethnicity, population density, geographic region of residence, adult education, and current employment. The domain Arizona/California was also included. Design effects associated with percentage estimates exhibiting low precision were not used. Because the design effects from the licit drug use estimates tended to be larger than the design effects from the illicit drug use estimates, the median design effects were computed separately for these two classifications. Table 2 presents the median design effects for the illicit drugs, and Table 3 presents the median design effects for the licit drugs. These tables can be used to calculate an approximate variance estimate for a particular domain of 1997 NHSDA as follows:

$$var(p_d)_{appx} = DEFF_{d,MED} * [p_d(1-p_d)/n_d] \ , \qquad (2)$$

where

p_d = estimated proportion for domain d,

n_d = sample size for domain d, and

$DEFF_{d,MED}$ = median design effect for domain d .

The approximate standard error estimate for p_d, $SE(p_d)_{appx}$, is simply the square root of $var(p_d)_{appx}$.

Model-Based Prediction

When a median design effect for a domain under investigation is not listed in Tables 2 or 3, an alternative standard error approximation is recommended. This approximation uses a prediction equation obtained from modeling estimated design effects. The definition of the design effect is the basis for the regression model:

$$DEFF(p) = var(p)/[p(1-p)/n] \ ,$$

where

$var(p)$ = design-based variance estimate of p

$[p(1-p)/n]$ = simple random sample variance estimate of p .

Taking the log (base 10) of both sides of the above equation leads to the following log-linear model:

$$\log[DEFF(p)] = \beta_0 + \beta_1 \log(p) + \beta_2 \log(1-p) + \beta_3 \log(n) ,$$

where

$\beta_0, \beta_1, \beta_2, \beta_3$ = regression coefficients for the intercept, log(p), log(1-p), and log(n), respectively.

Separate models were fit for the licit and illicit drug use estimates in the 1997 NHSDA. The design effects used to calculate the medians in Tables 2 and 3 were used to fit the licit and illicit drug use models for the 1997 NHSDA.

By substituting the fitted model into the definition of the design effect, a prediction equation for the approximate SE is obtained:

$$SE_i\ (p)_{appx} = \frac{10^{(b_{0i}/2)} * p^{(1+b_{1i})/2} * (1-p)^{(1+b_{2i})/2}}{n^{(1-b_{3i})/2}} ,$$

where

$b_{0i}, b_{1i}, b_{2i}, b_{3i}$ = regression coefficients estimates for the intercept, log(p), log(1-p), and log(n), respectively.

The index-I indicates whether the standard error approximation is for a licit drug or illicit drug prevalence estimate.

After solving for the regression coefficients, the above approximation reduces to the following two prediction eq

$$SE(p_{illicit})_{appx} = \frac{1.1032 * p^{(0.8264)} * (1-p)^{(0.6002)}}{n^{(0.4036)}} . \quad (3)$$

$$SE(p_{licit})_{appx} = \frac{0.8911 * p^{(0.5910)} * (1-p)^{(0.5569)}}{n^{(0.3876)}} . \quad (4)$$

Tables 4 and 5 present generalized standard errors for various percentages (from 1% to 99%) and sample sizes (from 100 to 24,505) for the 1997 NHSDA, predicted from Equations (3) and (4).

In summary, the user may obtain 1997 NHSDA standard error estimates from the following recommended order of sources:

1. commercially available variance estimation software packages, such as SUDAAN; otherwise,

2. published standard errors from reports using data from the 1997 NHSDA (obtainable upon request from the OAS at SAMHSA); otherwise,

3. median domain design effects appearing in Tables 2 and 3 and application of Equation (2); otherwise,

4. model-based prediction, using Equations (3) and (4) or Tables 4 and 5.

Once the variance estimates have been obtained, the user may apply the methods discussed in previous sections to compute confidence intervals or make statistical comparisons.

Use of Sample Weights and Sample Design Variables

The NHSDA sample is not self-weighting, so analysts are advised to use the sample weight when attempting to use the NHSDA data to draw inferences about the target population or any subdomain of the target population. All estimates published in SAMHSA reports (such as 1997 Main Findings) are weighted. The appropriate and final sample weight is called ANALWT on this data file. This sample weight represents the total number of target population persons each record on the file represents. Note that the sum of ANALWT, over all records on the data file, represents an estimate of the total number of people in the target population. Additional information on the sample weighting procedures and the sample weight components may be found in the *1997 Methodological Resource Book,* available from OAS.

The public use file contains two sample design variables in addition to ANALWT. These variables are VESTR (sample stratum) and VEREP (replicate within stratum) and must be used to estimate variances and standard errors when using commercially available variance estimation software packages such as SUDAAN or any other.

Confidentiality of Data

To protect the confidentiality of NHSDA respondents, all variables that could be used to identify individual respondents have been deleted from the public use file. To further protect confidentiality, some continuous variables have been categorized. In general, the cutpoints of each categorized variables are the quintiles of the weighted distribution. These data modifications should not greatly affect most analytical uses of the 1997 NHSDA public use file.

		The following three variables, MRJPRBS3, MRJ2PRB3, and MRJ3PRB3, differ from similarly named variables from past years. Although these variables were created in the same manner as in previous years, the coding of the source variables used to create these three variables was changed this year. The source variables were changed to exclude respondents who reported problems associated with a particular drug but did not report past year use on that drug's corresponding answer sheet. Accordingly, this change in the source variables affected these three variables as well. These three variables were created by examination of the following source variables: IRACMRJ3, IRBTMRJ3, IRGRMRJ3, IRLAMRJ3, IREMMRJ3, IRHLMRJ3, IRUCMRJ3.

Hello. I'm _____, and I'm working on a nationwide study sponsored by the U.S. Department of Health and Human Services. You should have received a letter about this study. (SHOW LETTER.)

- First, please tell me how old (you were/SAMPLE MEMBER was) on (your/his/her) last birthday.

  SAMPLE MEMBER'S AGE ON LAST BIRTHDAY ..... ____

- IF SAMPLED CHILD'S AGE IS UNDER 12, VERIFY AGE ON LAST BIRTHDAY.
- IF VERIFIED AGE IS UNDER 12, DO NOT INTERVIEW! **STOP!**

- IF SAMPLE MEMBER IS 12-17 YEARS OLD, GO TO BACK OF THIS PAGE. →
- IF SAMPLE MEMBER IS 18 OR OLDER, CONTINUE: – We are interviewing approximately 18,000 individuals across the nation. You have been selected to participate in the study, based on scientific sampling procedures. Your responses will represent the views of over 11,500 Americans. We cannot substitute anyone else if you decide not to participate.

  The study collects information on use of alcohol, cigarettes, and drugs, certain illegal behaviors, and other physical and mental health-related issues for the nation as a whole. Responses are never connected to individuals. Because it is important that we get the most accurate information possible, special protections are provided to ensure your privacy. (SHOW STATEMENT OF CONFIDENTIALITY.) This statement describes the measures being taken to ensure the confidentiality of your responses, which are protected by a Federal Certificate of Confidentiality. The Federal Government has issued a Certificate of Confidentiality to the researchers who are conducting this study indicating that Federal laws require all information obtained from you only be used for research purposes. Your participation will not put you at any risk, and your truthful responses will be of great value.

  We also would like to conduct the interview in as private a setting as possible. Can we find a reasonably private spot to complete the interview? If it is all right with you, let's get started.

- IF SPEAKING TO PARENT OF 12-17 YEAR-OLD (MINOR) SAMPLE MEMBER, READ PARAGRAPH "B." OTHERWISE, ASK TO SPEAK TO A PARENT OF THE SAMPLE MEMBER. THEN READ BOTH PARAGRAPH "A" AND PARAGRAPH "B" TO THE PARENT.

Paragraph "A" Hello, I'm _____, and I'm working on a nationwide study sponsored by the U.S. Department of Health and Human Services. You should have received a letter about this study. (SHOW LETTER, IF NECESSARY.)

Paragraph "B" Your (AGE) year-old child has been selected to participate. (He/she) was selected based on scientific sampling procedures so that the answers your child provides will represent those of approximately 5,000 other youths. No substitution can be made if your child does not participate. The answers (he/she) gives us will be kept strictly confidential, and no names are ever connected with the survey. To protect the confidentiality of your child's answers, you will not be permitted to see (his/her) completed survey. The study collects information about use of alcohol, cigarettes, and drugs, certain illegal behaviors, as well as other physical and mental health-related issues for the nation as a whole. (OFFER QUESTIONNAIRE TO THE PARENT SO HE/SHE MAY TAKE IT, AND CONTINUE): This is the questionnaire we will be using. (IF THE PARENT WANTS TO EXAMINE QUESTIONNAIRE, LET HIM/HER DO SO, ANSWER ANY QUESTIONS, AND THEN SAY): The results of this study will provide a major source of information on drug experience and will be used for important research purposes. If it is all right with you, we could get started. We also like to conduct the interview in as private a setting as possible. Can we find a reasonably private spot to complete the interview?

- AFTER OBTAINING PARENTAL PERMISSION, READ THE FOLLOWING PARAGRAPHS TO THE 12-17 YEAR-OLD SELECTED AS THE SAMPLE MEMBER.

CALENDAR [redacted]

Throughout the rest of this questionnaire, I will be asking you to answer a number of questions about three specific time periods, namely the past 30 days, the past 12 months and your lifetime. To help you remember the first two time periods, let's mark this calendar with the beginning dates for each one of them.

(SHOW CALENDAR TO RESPONDENT.)

Now, let's think about the past 30 days. According to the calendar, (MONTH AND DATE) was 30 days ago, so I will write (MONTH AND DATE) here on the calendar. I'll call that your 30-day reference date.

(WRITE 30-DAY REFERENCE DATE ON CALENDAR AND CIRCLE DAY; UNDERLINE ENTIRE 30-DAY PERIOD.)

A number of questions will ask about the past 12 months, that is since this date last year. Let's look at the calendar and find that date. I'll call that your 12-month reference date.

(WRITE 12-MONTH REFERENCE DATE ON CALENDAR, AND CIRCLE DAY ON CALENDAR.)

Please use this calendar as we go through the interview to help you remember when different things happened. I will remind you to think about your 30-day reference date and your 12-month reference date when I ask you questions.

1997 NHSDA

TOBACCO [redacted] (ANSWER SHEET #1)

The next set of questions asks about different forms of tobacco, such as cigarettes, chewing tobacco, and snuff.

I will give you an answer sheet to mark your answers. The questions are set up so that every person answers every question whether or not he or she has used tobacco. That way, I will not know what your answers are. Even if a question doesn't apply to you, there is an answer provided for you to mark, after I read it to you.

(HAND ® THE TOBACCO ANSWER SHEET #1, A PEN, AND THE LARGE ENVELOPE.)

Read along to yourself from your answer sheet as I read the questions and instructions out loud. Then read all the answer choices printed below the question and either write a number in the space provided or mark an "X" in one of the boxes for that question. On this answer sheet, you should mark only one answer for each question. When you finish this answer sheet, please put it in the envelope. At the end of the interview, we'll seal the envelope, and I'll drop it in the nearest mailbox. You can go to the mailbox with me, if you'd like.

Let's start. Remember, to answer a question, just mark an "X" in the box beside the best answer or, in some questions, write in a number on the solid line provided out to the right of the first answer choice. At the top of the answer sheet is an example of how to mark an answer with an "X," and another example of how to write in a number. If you have any questions about how to record your answer, just let me know.

The first 10 questions are about cigarettes only.

C-1. **First, I will read question C-1. Tell me when you have found it.** (PAUSE.) Question C-1 says: **Have you ever smoked a cigarette, even one or two puffs?**

- If you have ever smoked at least one or two puffs from a cigarette, please mark the first box. [1]
- If you have never smoked a cigarette in your life, please mark the second box. [2]

Now we will go to question C-2. Remember, it is necessary for us to get an answer from you for every question, even if the question doesn't apply to you.

C-2. **How old were you the first time you smoked a cigarette, even one or two puffs?**

- On the solid blank line, write in how old you were when you first smoked a cigarette.
- If you have never smoked a cigarette in your life, please mark the box at the end of the second answer line. [991]

C-3. Now look at question C-3. Question C-3 says: **Think about the entire time since you first smoked a cigarette. Altogether, on how many days in your life have you smoked a cigarette?**

- If you smoked on more than 300 days in your life, mark the first box. [1]
- The next answer is at least 101 but not more than 300 days. Mark the second box if the number of days on which you smoked a cigarette was at least 101 but not more than 300 days. [2]
- Mark the third box if the number of days is at least 12 but not more than 100 days. [3]
- Mark the fourth box if the number of days is at least 3 but not more than 11. [4]
- And, mark box 5 if you smoked a cigarette on at least 1 but not more than 2 days in your life. [5]
- If you never smoked a cigarette in your life, mark the last box. [91]

Please turn the page and find question C-4.

C-4. The next question is C-4. It says: **How long has it been since you last smoked a cigarette?**

- If you last smoked a cigarette within the past 30 days, mark the first box. [1]
- If it has been more than 30 days ago but within the past 12 months that you last smoked a cigarette, mark the second box. [2]
- If you last smoked a cigarette more than 12 months ago but within the past 3 years, mark the third box. [3]
- If it has been more than 3 years ago since you last smoked a cigarette, mark the fourth box. [4]
- If you have never smoked a cigarette in your life, please mark the last box; it tells us you've never smoked a cigarette. [91]

C-5. **For question C-5, think specifically about the past 30 days -- that is, from your 30-day reference date up to and including today. During the past 30 days, on how many days did you smoke a cigarette?**

- On the solid blank line, please write the number of days you smoked, even if it was just a puff, since your 30-day reference date.
- If you have smoked cigarettes, but not during the past 30 days, please mark the first box; it tells us you've smoked, but not during the past 30 days. [93]
- If you have never smoked a cigarette in your life, please mark the last box. [91]

C-6. **When you smoked cigarettes during the past 30 days, how many did you <u>usually</u> smoke each day?** If the number varied from day to day, mark the box for the number of cigarettes you smoked on a typical day.

- Mark the first box if you smoked at least a puff or two but less than 1 cigarette each day. [1]
- Mark the second box if you smoked at least 1 but not more than 5 cigarettes each day. [2]
- Mark the third box if you smoked at least 6 but not more than 15 cigarettes (about ½ pack) each day. [3]
- Mark the fourth box if you smoked at least 16 but not more than 25 cigarettes (about 1 pack) each day. [4]
- Mark the fifth box if you smoked at least 26 but not more than 35 cigarettes (about 1 ½ packs) each day. [5]
- Mark the sixth box if you smoked more than 35 cigarettes (about 2 packs) each day. [6]
- If you have smoked cigarettes, but not during the past 30 days, mark the next-to-last box; it tells us you've smoked, but not during the past 30 days. [93]
- If you have never smoked a cigarette in your life, mark the last box. [91]

C-7. The next question is C-7. It asks, **When you smoked cigarettes during the past 30 days, how soon after you woke up in the morning did you usually smoke your first cigarette?**

- Mark the first box if you smoked your first cigarette within five minutes after you woke up in the morning. [1]
- Mark the second box if you smoked your first cigarette within 6 to 30 minutes after you woke up. [2]
- Mark the third box if it was more than thirty minutes but within an hour after you woke up. [3]
- Mark the fourth box if you had your first cigarette between 1 and 3 hours after you woke up. [4]
- Mark box 5 if you usually had your first cigarette 4 or more hours after you woke up. [5]
- If you have smoked cigarettes, but not during the past 30 days, mark the next-to-last box. [93]
- If you have never smoked a cigarette in your life, mark the last box. [91]

Please go to the next page of the answer sheet.

C-8. Question C-8: **Has there ever been a period in your life when you smoked cigarettes every day?**

- If you have ever smoked cigarettes every day, mark the first box. [1]
- If you have never smoked cigarettes every day, mark the last box. [2]

C-9. Question C-9 asks: **How old were you when you first started smoking cigarettes every day?**

- Write in how old you were when you started smoking cigarettes every day on the solid blank line.
- If you have smoked cigarettes, but never every day, please mark the first box. [993]
- If you have never smoked a cigarette in your life, mark the second box. [991]

C-10. **For how many years have you smoked or did you smoke cigarettes every day?**

- Write the number of years that you smoked cigarettes every day on the solid blank line.
- If you have smoked cigarettes every day, but only for less than one whole year, mark the first box. [0]
- If you have smoked cigarettes, but never every day, please mark the second box. [993]
- If you have never smoked a cigarette in your life, please mark the last box. [991]

C-11. **The last 2 questions are about smokeless tobacco, such as chewing tobacco and snuff. Question C-11 asks: Have you ever, even once, used chewing tobacco or snuff?**

- If you have ever used chewing tobacco or snuff, mark the first box. [1]
- If you have never used chewing tobacco or snuff in your life, mark the second box. [2]

C-12. **How long has it been since you last used chewing tobacco or snuff?**

- If you last used chewing tobacco or snuff within the past 30 days, mark the first box. [1]
- If it has been more than 30 days ago but within the past 12 months that you last used chewing tobacco or snuff, mark the second box. [2]
- If you last used chewing tobacco or snuff more than 12 months ago but within the past 3 years, mark the third box. [3]
- If it has been more than 3 years since you last used chewing tobacco or snuff, mark the fourth box. [4]
- If you have never used chewing tobacco or snuff in your life, mark the last box. [91]

(WAIT FOR ® TO FINISH.)

Please check back and make sure you have marked <u>one</u> answer for each question. Even if you never used any kind of tobacco, it is necessary to have your answer to every question to show that I asked every question.

(PAUSE)

Please put your answer sheet in the envelope but don't seal the envelope yet because there will be other answer sheets.

The next questions are about alcoholic beverages, such as beer, wine, liquor, brandy and mixed drinks. (HAND ® SHOWCARD 3.) **Take a moment to look over the names of alcoholic beverages listed on Card 3. The list gives examples of the types of beverages that the next set of questions asks about.** (PAUSE) **For these questions about alcoholic beverages we are only interested in any drinks you may have had. Please do not include sips you may have had from another person's drink.**

Please make sure you marked one answer for each question. Even if you never had an alcoholic beverage, it is necessary to have your answer to every question. Put your answer sheet in the envelope.

(TAKE BACK SHOWCARD 3 AND GO TO PAGE 15, MARIJUANA.)

A-1. **The next few questions are about drinks of alcoholic beverages. Throughout this answer sheet, by a "drink," we mean a can or bottle of beer, a glass of wine or a wine cooler, a shot of liquor, or a mixed drink with liquor in it. Not including sips from another person's drink, have you ever, even once, had a drink of any type of alcoholic beverage?**

- If you have ever had a drink of an alcoholic beverage, please mark the first box. [1]
- If you have never had a drink of any alcoholic beverage in your life, mark the second box. [2]

A-2. **How old were you the first time you had a drink of any alcoholic beverage? Do not include sips from another person's drink.** If you can't remember exactly how old you were, make your best guess of (the) one specific age.

- On the solid blank line, write in how old you were the first time you drank an alcoholic beverage.
- If you have never drunk an alcoholic beverage in your life, mark the box at the end of the second line. [991]

A-3. For question A-3, **Think about the last time you drank any type of alcoholic beverage. How long has it been since you last drank an alcoholic beverage?**

- If you last drank an alcoholic beverage within the past 30 days, mark the first box. [1]
- If it has been more than 30 days ago but within the past 12 months that you last drank an alcoholic beverage, mark the second box. [2]
- If it was more than 12 months ago but within the past 3 years, mark the third box. [3]
- If it has been more than 3 years since you last drank an alcoholic beverage, mark the fourth box. [4]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

A-4. **Now think about the past 12 months, from your 12-month reference date through today.** For question A-4, as I read the categories, mark an "X" in the box for the answer that tells: **On how many days in the past 12 months did you drink an alcoholic beverage?**

- Mark the first box for more than 300 days (which is every day or almost every day). [1]
- Mark the second for at least 201 but not more than 300 days (5 to 6 days a week). [2]
- Mark the next for at least 101 but not more than 200 days (3 to 4 days a week). [3]
- Mark the next for at least 51 but not more than 100 days (1 to 2 days a week). [4]
- Mark the next for at least 25 but not more than 50 days (3 to 4 days a month). [5]
- Mark the next for at least 12 but not more than 24 days (1 to 2 days a month). [6]
- Mark the next for at least 6 but not more than 11 days (less than one day a month). [7]
- Mark the next for at least 3 but not more than 5 days. [8]
- And mark the third from the last for at least 1 but not more than 2 days. [9]
- If you have ever drunk alcoholic beverages, but not during the past 12 months, mark the next-to-last box. [93]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

Please go to Question A-5 at the top of the next page.

A-5. **During the past 12 months, when you drank alcoholic beverages, on how many days did you get very high or drunk?**

- Mark the first box for more than 300 days (which would be every day or almost every day). [1]
- Mark the second box for at least 201 but not more than 300 days (that is about 5 to 6 days a week). [2]
- Mark the next for at least 101 but not more than 200 days (or about 3 to 4 days a week). [3]
- Mark the next for at least 51 but not more than 100 days (1 to 2 days a week). [4]
- Mark the next for at least 25 but not more than 50 days (3 to 4 days a month). [5]
- Mark the next for at least 12 but not more than 24 days (1 to 2 days a month). [6]
- Mark the next for at least 6 but not more than 11 days (less than one day a month). [7]
- Mark the next for at least 3 but not more than 5 days in the past 12 months. [8]
- Mark the next for at least 1 but not more than 2 days in the past 12 months. [9]
- If you drank an alcoholic beverage in the past 12 months, but you never got very high or drunk, mark the third box from the last. [90]
- If you have drunk alcoholic beverages, but not during the past 12 months, mark the next-to-last box. [93]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

Please go to the next page.

A-6. For question A-6, **Think specifically about the past 30 days -- that is, from your 30-day reference date up to and including today. During the past 30 days, on how many days did you drink one or more drinks of alcoholic beverages?**

- On the solid blank line, write the number of days in the past 30 days when you had a drink of an alcoholic beverage.
- If you have drunk alcoholic beverages, but not during the past 30 days, mark the first box. [93]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

A-7. **On the days that you drank during the past 30 days, how many drinks did you <u>usually</u> have?** Again, remember to count as a drink a can or bottle of beer; a wine cooler or a glass of wine, champagne, or sherry; a shot of liquor or a mixed drink or cocktail.

- On the solid blank line, write the number of drinks you usually had on the days when you drank an alcoholic beverage.
- If you have drunk alcoholic beverages, but not during the past 30 days, mark the first box. [93]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

A-8. **During the past 30 days, on how many days did you have 5 or more drinks on the same occasion? By "occasion," we mean at the same time or within a couple of hours of each other.**

- On the solid blank line, write the number of days in the past 30 days when you drank 5 or more drinks of an alcoholic beverage on the same occasion.
- If you never had 5 or more drinks on the same occasion on any day when you drank during the past 30 days, mark the first box. [90]
- If you have drunk alcoholic beverages, but not during the past 30 days, mark the second box. [93]
- If you have never drunk an alcoholic beverage in your life, mark the last box. [91]

(WAIT FOR ® TO FINISH.)

Please check back and make sure you have marked <u>one</u> answer for each question. Even if you never had an alcoholic beverage, it is necessary to have your answer to every question.

(TAKE BACK SHOWCARD 3.)

The next questions are about marijuana and hashish. Marijuana is also called pot or grass. Marijuana is usually smoked -- either in cigarettes, called joints, or in a pipe. It is sometimes cooked in food.

Hashish is a form of marijuana that is also called "hash." It is usually smoked in a pipe. Another form of hashish is hash oil.

(HAND ® MARIJUANA ANSWER SHEET #3.)

Beginning with this answer sheet, many of the remaining questions will be about illegal drugs. Remember, all your answers are totally confidential and protected by a Federal Certificate of Confidentiality. We need an answer for each and every question -- whether or not you've ever tried marijuana.

M-1. Question M-1 asks: **Have you ever, even once, used marijuana or hashish?**

- Mark the first box if you have used marijuana or hashish. [1]
- Mark the second box if you have never used marijuana or hashish in your life. [2]

M-2. **How old were you the first time you used marijuana or hashish?** If you're not sure how old you were, make your best guess.

- Write in how old you were the first time you used marijuana or hashish on the solid blank line.
- If you have never used marijuana or hashish in your life, mark the box at the end of the second line. [991]

M-3. **Think about the entire time since you first used marijuana or hashish. Altogether, on how many days in your life have you used marijuana or hashish?** If you are not sure how many days you've used marijuana or hashish, make your best guess.

- If your answer is more than 300 days, mark the first box. [1]
- If your answer is at least 101 but not more than 300 days, mark the second box. [2]
- If your answer is at least 12 but not more than 100 days, mark the third box. [3]
- If your answer is at least 3 but not more than 11 days, mark the fourth box. [4]
- If your answer is at least 1 but not more than 2 days, mark the next-to-last box. [5]
- If you have never used marijuana or hashish in your life, mark the last box. [91]

M-4. **How long has it been since you last used marijuana or hashish?**

- If your answer is within the past 30 days, mark the first box. [1]
- If your answer is more than 30 days ago but within the past 12 months, mark the second box. [2]
- If your answer is more than 12 months ago but within the past 3 years, mark the third box. [3]
- If your answer is more than 3 years ago, mark the next-to-last box. [4]
- If you have never used marijuana or hashish in your life, mark the last box. [91]

Please turn the answer sheet over.

M-5. **For M-5, think about the past 12 months, from your 12-month reference date through today. On how many days in the past 12 months did you use marijuana or hashish?**

- Mark the first box for more than 300 days (which is every day or almost every day). [1]
- Mark the second for at least 201 but not more than 300 days (5 to 6 days a week). [2]
- Mark the next for at least 101 but not more than 200 days (3 to 4 days a week). [3]

- Mark the next for at least 25 but not more than 50 days (3 to 4 days a month). [5]
- Mark the next for at least 12 but not more than 24 days (1 to 2 days a month). [6]
- Mark the next for at least 6 but not more than 11 days (less than one day a month). [7]
- Mark the next for at least 3 but not more than 5 days in the past 12 months. [8]
- And mark the third from the last for at least 1 but not more than 2 days in the past 12 months. [9]
- If you have ever used marijuana or hashish, but not during the past 12 months, mark the next-to-last box. [93]
- If you have never used marijuana or hashish in your life, mark the last box. [91]

M-6. **Think specifically about the past 30 days -- that is, from your 30-day reference date up to and including today. During the past 30 days, on how many days did you use marijuana or hashish?** If you're not sure, try to make a good guess.

- On the solid blank line, write in the number of days in the past 30 days when you used marijuana or hashish.
- If you have used marijuana or hashish, but not during the past 30 days, mark the first box. [93]
- If you have never used marijuana or hashish in your life, mark the second box. [91]

HALLUCINOGENS [redacted] (ANSWER SHEET #7

The questions in this section are about substances like LSD, peyote, mescaline, and PCP, which is also known as "angel dust." These drugs are called hallucinogens because they often cause people to feel that they are seeing or experiencing things that are not real.

(HAND ® SHOWCARD 4.)

A list of some common hallucinogens is shown on Card 4. These and many other substances that people use as hallucinogens are often known only by street names, and we can't list them all. Please take a moment to look at the substances listed on the card so you know what kind of drugs the next questions are about.

(HAND ® HALLUCINOGENS ANSWER SHEET #7.)

L-1. **Question L-1 has the same list of hallucinogens that is printed on Card 4. As I read the list of hallucinogens, please mark one box beside each hallucinogen to indicate whether you have ever used that hallucinogen, even once. On each line, mark the "YES" box on the left if you have ever used that hallucinogen, even once. Mark the "NO" box on the right if you have never used that hallucinogen.**

a. **Have you ever, even once, used LSD, also called "acid"?**
b. **Have you ever, even once, used PCP, also called "angel dust" or phencyclidine?**
c. **... Peyote?**
d. **... Mescaline?**
e. **... Psilocybin, found in mushrooms?**
f. **... "Ecstasy," also known as MDMA?**
g. **Have you ever used a hallucinogen whose name you don't know?**
h. **Have you ever used any other hallucinogens besides the ones I've named from this list?** If you mark the "YES" box for this last item, please print on the lines at the bottom of the list the names of all the hallucinogens you've ever used but that we don't have listed.

- If your answer is at least 3 but not more than 11 days, mark the fourth box. [4]
- If your answer is at least 1 but not more than 2 days, mark the next-to-last box. [5]
- If you have never used any hallucinogen in your life, mark the last box. [91]

Please turn the page and find question L-4 at the top.

L-4. **How long has it been since you last used LSD, PCP, or any other hallucinogen?**

- If your answer is within the past 30 days, mark the first box. [1]
- If your answer is more than 30 days ago but within the past 12 months, mark the second box. [2]
- If your answer is more than 12 months ago but within the past 3 years, mark the third box. [3]
- If your answer is more than 3 years ago, mark the next-to-last box. [4]
- If you have never used any hallucinogen in your life, mark the last box. [91]

L-5. Now, for question L-5, **Think about the past 12 months, from your 12-month reference date through today. On how many days in the past 12 months did you use LSD, PCP, or any other hallucinogen?**

- Mark the first box for more than 300 days (which is every day or almost every day). [1]
- Mark the second for at least 201 but not more than 300 days (5 to 6 days a week). [2]
- Mark the next for at least 101 but not more than 200 days (3 to 4 days a week). [3]
- Mark the next for at least 51 but not more than 100 days (1 to 2 days a week). [4]
- Mark the next for at least 25 but not more than 50 days (3 to 4 days a month). [5]
- Mark the next for at least 12 but not more than 24 days (1 to 2 days a month). [6]
- Mark the next for at least 6 but not more than 11 days (less than one day a month). [7]
- Mark the next for at least 3 but not more than 5 days in the past 12 months. [8]
- And mark the third from the last for at least 1 but not more than 2 days in the past 12 months. [9]
- If you have used an hallucinogen, but not during the past 12 months, mark the next-to-last box. [93]
- If you have never used any hallucinogen in your life, mark the last box. [91]

L-6. **Think specifically about the past 30 days -- that is, from your 30-day reference date up to and including today. During the past 30 days, on how many days did you use LSD, PCP, or any other hallucinogen?**

- On the solid blank line, write in the number of days in the past 30 days when you used LSD, PC or another hallucinogen.
- If you have used an hallucinogen, but not during the past 30 days, mark the first box. [93]
- If you have never used any hallucinogen in your life, mark the second box. [91]

L-7. **Now think only about LSD. How long has it been since you last used LSD?**

- If your answer is within the past 30 days, mark the first box. [1]
- If your answer is more than 30 days ago but within the past 12 months, mark the second box. [2]
- If your answer is more than 12 months ago but within the past 3 years, mark the third box. [3]
- If your answer is more than 3 years ago, mark the next-to-last box. [4]
- If you have never used LSD in your life, mark the last box. [91]

Please go to the next page.

L-8. **Now think only about PCP. How long has it been since you last used PCP?**

- If your answer is within the past 30 days, mark the first box. [1]
- If your answer is more than 30 days ago but within the past 12 months, mark the second box. [2]
- If your answer is more than 12 months ago but within the past 3 years, mark the third box. [3]
- If your answer is more than 3 years ago, mark the next-to-last box. [4]
- If you have never used PCP in your life, mark the last box. [91]

(TAKE BACK SHOWCARD 4.)

The questions in this section are about liquids, sprays, and gases that people sniff or inhale to get high or to make them feel good. Lighter fluid, glue, paint thinners, ether, "poppers," and certain aerosol sprays are examples of substances people breathe in or sniff for kicks or to get high.

(HAND ® SHOWCARD 5.) **The questions use the term "inhalant" to include all the things listed on Card 5, as well as any other substances that people sniff or inhale for kicks or to get high. Take a moment to look at the substances listed on the card so you know what kinds of liquids, sprays, and gases these questions are about.**

(HAND ® INHALANTS ANSWER SHEET #8.)

IN-1. **Question IN-1 has the same list of inhalants that is printed on Card 5. As I read the list of inhalants, please mark one box beside each type of inhalant to indicate whether you have ever used that kind of inhalant, even once, for kicks or to get high.** On each line, mark the box on the left for "YES" if you have ever used that kind of inhalant, even once. Mark the box on the right for "NO" if you have never used any inhalant of that kind.

a. **Have you ever, even once, inhaled Amyl nitrite, "poppers," locker room odorizers, or "rush" for kicks or to get high?**

b. **Have you ever, even once, inhaled correction fluid, degreaser, or cleaning fluid for kicks or to get high?**

c. ... **Gasoline or lighter fluid?**

d. ... **Glue, shoe polish, or toluene?**

e. ... **Halothane, ether, or other anesthetics?**

f. ... **Lacquer thinner or other paint solvents?**

g. ... **Lighter gases, such as butane or propane?**

h. ... **Nitrous oxide or "whippets"?**

i. ... **Spray paints?**

j. Have you ever, even once, inhaled **some other aerosol spray** for kicks or to get high?

k. **Have you ever used any inhalant whose name you don't know, for kicks or to get high?**

l. **Have you ever used any other inhalants for kicks or to get high besides the ones I've named from this list?** If you mark the "YES" box for this last item, please print on the lines at the bottom of the list the names of all the substances you've ever inhaled for kicks or to get high but that we don't have listed.

ANALGESICS [redacted] (ANSWER SHEET #9

The next four answer sheets are about drugs that people are supposed to take only if they have a prescription from a doctor. For the questions on these next four answer sheets we are only interested in your use of a drug if:

- **the drug was <u>not</u> prescribed for you, or if**
- **you took the drug only for the experience or feeling it caused.**

This section is about the use of <u>pain killers</u>, which are known as analgesics. The questions ask only about <u>prescription</u> pain killers. Do not include over-the-counter pain killers, such as aspirin, Tylenol, Advil, Anacin, or others available over-the-counter. We're interested only in use of <u>prescription</u> analgesics or pain killers that were <u>not</u> prescribed for you, or that you took only for the experience or feeling they caused.

(HAND ® PILLCARD A -- MAKE SURE ® TAKES CARD IN HIS/HER HAND.)

Please look at Card A. It shows pictures of some different kinds of prescription pain killers and lists the names of some others. The questions about pain killers include all of these drugs on the card as well as <u>all</u> other pain killers that are supposed to be available only with a prescription from a doctor. These pictures show only pills, but we are interested in your use of <u>any</u> form of prescription pain killers that were <u>not</u> prescribed for you, or that you took only for the experience or feeling they caused.

BOX A

Please put your answer sheet in the envelope.

(TAKE BACK PILLCARD C.)

The questions in this section are about sedatives and barbiturates. These drugs are also called "downers" and sleeping pills. People take these drugs to help them relax or to stay calm. We're interested only in use of prescription sedatives that were not prescribed for you, or that you took only for the experience or feeling they caused.

(HAND ® PILLCARD D -- MAKE SURE ® TAKES CARD IN HIS/HER HAND.)

Please look at Card D. It shows pictures of some different kinds of prescription sedatives and lists the names of some others. The questions about sedatives include all of these drugs on the card as well as all other sedatives that are supposed to be available only with a prescription from a doctor. These pictures show only pills, but we are interested in your use of any form of prescription sedatives that were not prescribed for you, or that you took only for the experience or feeling they caused.

k. Did you receive treatment or counseling for your use of any other drug besides those I've named from the list in TX-9? If you mark the "YES" box for this last item, please print on the line at the bottom of the list the name of the other drug for which you got treatment or counseling.

TX-10. **What was the primary drug you entered treatment or counseling for during the last time you were treated?**

- Write the name of the primary drug you received treatment for on the solid blank line beneath Question TX-10.

TX-11. Question TX-11 asks: **What was the outcome of the primary treatment or counseling at the place you marked in question TX-8?** As I read the choices, please mark only one box for the best answer. Was the outcome of the primary treatment or counseling at the place you marked in TX-8:

- That you are still in treatment? [1]
- That you successfully completed treatment? [2]
- That you left because you had a problem with the program? [3]
- That you left because you couldn't afford to continue treatment? [4]
- That you left because your family needed you? [5]
- That you left because you began using drugs again? [6]
- Or did your last treatment have some other outcome? If so, please mark the last box, then write on the line at the bottom of the list what this other outcome was. [7]

Please turn the page.

TX-12. **How long did you stay in treatment for your alcohol or drug use during your last treatment at the place you marked in question TX-8? If you are currently in treatment for alcohol or drug use, how long have you been in treatment so far?**

- If you want to give your answer in terms of the number of days you were in treatment during your last treatment, write the number of days on the first solid blank line.
- If you want to give your answer in terms of the number of months you were in treatment during your last treatment, write the number of months on the second solid blank line.

TX-13. As I read each of the sources of payment for treatment or counseling, **Please mark one box beside each source in question TX-13 to indicate whether your last treatment or counseling that you marked in question TX-8 for alcohol or drug use was paid for by that source, even if it only paid part of the cost.** On each line, mark the "YES" box on the left if your last treatment or counseling for alcohol or drug use was paid for by that source. Mark the "NO" box on the right if your last treatment or counseling for alcohol or drug use was not paid for by that source.

a. Did health insurance pay for the last treatment you received?
b. Did Medicare pay for the last treatment you received?

Before we seal the envelope, there are a couple of forms I have to complete, and I need your help with one of them. (PEEL THIS ®'s CORRECT LABEL OFF SCREENING FORM. PLACE IT ON VERIFICATION FORM. PRINT FI NAME AND ID # ON VERIFICATION FORM.)

It is important that I do my job correctly; therefore, my supervisors will be checking on my work. Would you help me by printing your address and home telephone number on this form? Then place it in the postage-paid envelope so that my supervisor can write or call you in several weeks to confirm that I did my job. As you can see, this is kept separate from your answers so they will still be completely private.

While you are completing the verification form, I will be finishing some forms to show that I did the interview. Let me know when you are finished. Thank you very much for your help.
