

# **National Household Survey on Drug Abuse, 2000**

*United States Department of Health and  
Human Services. Substance Abuse and  
Mental Health Services Administration.  
Office of Applied Studies*

Codebook

\*\*\*Processor Notes\*\*\*

- 1) All system-missing values (denoted as “.” in the frequencies) were recoded to “-9” in this version of the data file. In the past these values were coded to “99”
- 2) Variables ending in ...NEWA through NEWE (e.g., HALNEWA) represent written responses to open-ended questions regarding use of specific drugs. This resulted in some instances of incorrectly classified drugs.
- 3) This data collection includes setup statements (e.g., a “do file” and dictionary) for StataSE. Analysts are advised that the conversion from ASCII to Stata format is likely to be slow due to the large file size. Subsets from the NSDUH may be downloaded from the on-line analysis system

\*\*\*Important Changes in Third Edition Release\*\*\*

- 1) The two study design variables VEREP and VESTR were revised to provide consistency with the 2004 study, which collapsed the strata to maximize the number of people in each replicate.
- 2) There were also 7 more variables (CIG30BRN, CIG30ROL, CHW30BRN, SNF30BRN, SLT30BRN, CGR30BRN, WRKBZCAT) that were dropped and replaced by the variables (CIG30BR2, CIG30RO2, CHW30BR2, SNF30BR2, SLT30BR2, CGR30BR2, WRKBZCA2). This was done to correct a problem with how rare responses were coded and to provide consistency with the 2004 NSDUH study as well as future public releases of the NSDUH study.
- 3) One more variable (EDUCCAT2) was added for this release. This additional variable provides consistency with the 2004 NSDUH study as well as future public releases of the NSDUH study.
- 4) By not accounting for a specific CAI skip pattern in the NSDUH questionnaire, the past year illicit drug treatment location variables (DRGHOSP DRGRFIN DRGRFOP DRGMHC DRGTXER DRGDOC DRGJAIL DRGSHG) and the past year alcohol treatment location variables (ALCHOSP ALCFIN ALCRFOP ALCMHC ALCTXER ALCDOC ALCJAIL ALCSHG) that were created for the substance use treatment analysis starting in 2000 have underestimated the prevalence of treatment at specific locations. This was corrected in this release.
- 5) The variable IISLTYFU was updated to fix the fact that some respondents were erroneously assigned 3s who should have received 1s.
- 6) The variable IIHALYFU was updated to fix the fact that some respondents were erroneously assigned 2s who should have received 3s.
- 7) The variable GOVTPROG was updated to provide consistency with the 2004 NSDUH study as well as future public releases of the NSDUH study.

# INTRODUCTION AND DESCRIPTION OF THE 2000 NATIONAL HOUSEHOLD SURVEY ON DRUG ABUSE

## Introduction

This codebook provides documentation for the 2000 National Household Survey on Drug Abuse (NHSDA) public use file. The variable names in this codebook are the variable names that appear in the dataset. The NHSDA is sponsored by the Office of Applied Studies (OAS) within the Substance Abuse and Mental Health Services Administration (SAMHSA) and is conducted by RTI of Research Triangle Park, North Carolina.

For each variable on the 2000 public use file, the codebook provides the variable name, a description of the variable, value codes and their meanings, and a univariate frequency distribution. Most of the variables originated as interview items. For created variables, the source variables and recoding specifications are provided, if space allows. In addition, case identification, sampling, and data collection variables are included on the file and documented in the codebook.

Extensive work was done on the 2000 public use file to protect respondent confidentiality while still allowing most variables to be available for analysts' use. These procedures are discussed in greater detail in the Confidentiality of Data section of this introduction. Briefly, the steps included standard procedures for eliminating variables for which there was a high risk that individuals could be identified and collapsing values of other variables. Additional special techniques to protect respondent confidentiality included subsampling of records and substitution of data from donors. Analysis of the data after these procedures showed that the effect on the levels and accuracy of estimates was minimal. Nevertheless, *because of the procedures that were implemented, users of this file are advised that previously published estimates may not be exactly reproducible from the variables on this file.*

## Overview of the NHSDA

The 2000 NHSDA is the 20<sup>th</sup> in a series, the primary purpose of which is to measure the prevalence and correlates of drug use in the United States. This survey series provides information about the use of illicit drugs, alcohol, and tobacco among members of the noninstitutionalized U.S. civilian population aged 12 or older. Surveys have been conducted periodically since 1971, with the most recent ones in 1979, 1982, 1985, 1988, and 1990 through 1999. Currently, public use files are available for surveys from 1979 onward.

In 1999, the NHSDA underwent a major redesign. The method of data collection was changed from a paper questionnaire administration to a computer-assisted administration. In addition, the sample design was changed from a strictly national design to a State-based sampling plan. These important changes have a major impact on the data produced from the NHSDA. *Because of the differences in methodology and impact of the new design on data collection, only*

*limited comparisons can be made between data from the redesigned surveys (1999 onward) and data obtained from surveys prior to 1999.*

Prior to 1999, the NHSDA was conducted using paper-and-pencil interviewing (PAPI) methods for an interview lasting about an hour. The NHSDA PAPI instrumentation consisted of a questionnaire booklet completed by an interviewer and a set of individual answer sheets completed by a respondent. All substance use questions and other sensitive questions appeared on the answer sheets, so the interviewer was unaware of the respondent's answers. Less sensitive questions, such as demographics, occupational status, household size, and composition, were asked aloud by the interviewer and recorded in the questionnaire booklet.

Starting in 1999, the NHSDA interview is now carried out using computer-assisted interviewing (CAI) methods. The survey uses a combination of a computer-assisted personal interviewing (CAPI) conducted by an interviewer and audio computer-assisted self-interviewing (ACASI). For the most part, questions previously administered by an interviewer are now administered by an interviewer using CAPI. Questions previously administered using self-administered answer sheets are now administered using ACASI. Use of ACASI is designed to provide respondents with a highly private and confidential means of responding to questions and to increase the level of honest reporting of illicit drug use and other sensitive behaviors.

*The 2000 NHSDA documentation includes specifications for the logic governing how respondents were routed through the questions in the interview. Analysts are encouraged to reference this document in conjunction with their review of the codebook (for searchable versions of the specifications, see <http://www.samhsa.gov/oas/nhsda/methods.cfm> and <http://datafiles.samhsa.gov>).*

A key feature of the NHSDA CAI instrument is a core/supplement structure. A core set of questions critical for basic trend measurement of prevalence rates remains in the survey every year and comprises the first part of the interview. Supplemental questions, or modules, that can be revised, dropped, or added from year to year make up the remainder of the interview. The core consists of initial demographic items and questions pertaining to the use of tobacco, alcohol, marijuana, cocaine, crack cocaine, heroin, hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives. Supplemental items include the remaining ACASI sections and demographic questions. It should be mentioned that some of the supplemental portions of the questionnaire have remained in the survey, relatively unchanged, every year (e.g., current health insurance coverage, income). Since 1988, additional information also has been gathered about the form of cocaine known as "crack" and about sharing needles for injection of drugs. In addition, the consequences of using various drugs have been given considerable attention since 1985.

The target population for the 2000 survey was the same as has been defined since the 1991 NHSDA: the civilian, noninstitutionalized population of the United States (including civilians living on military bases) who were 12 years of age or older at the time of the survey. Before 1991, the NHSDA sample was drawn from the household population of the contiguous 48 States. Alaska and Hawaii were added to the sample population in 1991, as were residents of noninstitutional group quarters (e.g., college dormitories, group homes, civilians dwelling on

military installations) and persons with no permanent residence (homeless people in shelters and residents of single rooms in hotels). In addition, six special-interest metropolitan statistical areas (MSAs) were oversampled in 1991. The 1992 and 1993 NHSDAs retained the oversampling of the six MSAs and were also designed to provide quarterly as well as annual estimates.

Beginning in 1999, the NHSDA sample employed a 50-State design with an independent, multistage area probability sample for each of the 50 States and the District of Columbia. The eight States with the largest population (which together account for 48 percent of the total U.S. population aged 12 or older) were designated as large sample States (California, Florida, Illinois, Michigan, New York, Ohio, Pennsylvania, and Texas). For these States, the design provided a sample large enough to support direct State estimates. For the remaining 42 States and the District of Columbia, smaller, but adequate, samples were selected to support State estimates using small area estimation (SAE) techniques. The design also oversampled youths and young adults, so that each State's sample was approximately equally distributed among three major age groups: 12 to 17 years, 18 to 25 years, and 26 years or older.

A description of the 2000 survey, including more detailed information on sample issues, can be found in the following NHSDA report:

*Summary of Findings from the 2000 National Household Survey on Drug Abuse* (DHHS Publication No. SMA 01-3549, NHSDA Series H-13). This report presents in tabular, graphical, and narrative bullet formats some key findings on drug use prevalence by age and major demographic variables in 2000. It is available at <http://www.samhsa.gov/oas/p0000016.htm#standard>.

## **Strengths and Limitations of the NHSDA**

The NHSDA is the only study that regularly produces estimates of drug use among civilian members of the noninstitutionalized population in the United States. The survey is an appropriate technique for estimating prevalence rates for use of different drugs because most drug use would not ordinarily come to the attention of administrative, medical, or correctional authorities and therefore would not be included in official statistics. In-person interviews with a large national probability sample seem to be the best way to estimate drug use in virtually the entire population of the United States.

The redesign of the NHSDA also has yielded improvements. With the expanded sample design, the precision of the estimates at the national level is improved substantially. The CAI methodology also has made data collection and processing more efficient and has improved the quality of the data.

Although the NHSDA is useful for many purposes, it has certain limitations. First, the data are self-reports of drug use, and their value depends on respondents' truthfulness and memory. Although some experimental studies have established the validity of self-reported data in similar contexts and the NHSDA procedures were designed to encourage honesty and recall, some underreporting and overreporting may have taken place. Second, the survey is cross-sectional rather than longitudinal. That is, individuals were interviewed only once and were not

followed for additional interviews. Each year's survey, therefore, provides an overview of the prevalence of drug use at a specific point in time rather than a view of how drug use changes over time for specific individuals. Third, because the target population of the survey is defined as the noninstitutionalized civilian population of the United States, a small proportion (slightly less than 2 percent) of the population is excluded. The subpopulations excluded are members of the active-duty military and persons in institutional group quarters (e.g., hospitals, prisons, nursing homes, treatment centers). If the drug use of these groups differs from that of the noninstitutionalized civilian population, the NHSDA may provide slightly inaccurate estimates of drug use in the total population. This may be particularly true for prevalence estimates for rarely used drugs, such as heroin.

## **Survey Methodology (1999 Survey Redesign)**

As noted above, the 1999 survey was the first conducted using CAI methods and marked the first year in a transition to improved State estimates based on minimum sample sizes per State. Household screening was also converted from a paper screening form to a handheld computer (Newton). To obtain the required precision at the State level and to improve the precision at the national level, an additional supplemental sample of 2,500 youths aged 12 to 17 was included to yield a total overall sample of 70,000. This large sample size allowed SAMHSA to continue reporting adequately precise demographic subgroup estimates at the national level without needing to oversample specially targeted demographics, as was required in the past. The achieved sample size for the 2000 survey was 71,764 persons. *Because of the subsampling step used in the procedures to control the risk of disclosing the identity of any respondent, only 58,680 records appear on the public use file (see the section on Confidentiality of Data).*

A coordinated 5-year sample design was developed. Although there is no overlap with the 1998 sample, a coordinated design for 1999 through 2003 facilitated a 50 percent overlap in first-stage units (area segments [see below]) between each 2 successive years from 1999 through 2003.<sup>1</sup> This design was intended to increase the precision of estimates in year-to-year trend analyses because of the expected positive correlation resulting from the overlapping sample between successive NHSDA years.

The 1999 through 2003 design allows for computation of estimates by State in all 50 States plus the District of Columbia. States may therefore be viewed as the first level of stratification as well as a reporting variable. Eight States, referred to as the large sample States, had a sample designed to yield 3,600 to 4,630 respondents per State for the 2000 survey. This sample size was considered adequate to support direct State estimates. The remaining 43 States had a sample designed to yield 900 to 1,030 respondents per State in the 2000 survey. In these 43 States, adequate data were available to support reliable State estimates based on SAE methodology. Initial plans called for target sample sizes of 3,600 persons in each of the eight large sample States and 900 in each of the remaining States. The additional sample of 2,500 youths aged 12 to 17 was allocated across States in a manner to most effectively increase the

---

<sup>1</sup>In segments used in 2 successive years, only addresses not sampled in the first year may be included in the second year's sample.

precision of national estimates. As a result, some State sample sizes were higher than the initially planned sample sizes of 3,600 for large sample States and 900 for small sample States.

### **Stratification and Selection of Primary Sampling Units (Area Segments)**

Within each State, sampling strata called field interviewer (FI) regions were formed. Based on a composite size measure, States were geographically partitioned into roughly equally sized regions. In other words, regions were formed such that each area yielded, in expectation, roughly the same number of interviews during each data collection period, thus distributing the workload equally among interviewers. The eight large sample States were divided into 48 FI regions; the remaining States were divided into 12 FI regions. Therefore, the partitioning of the United States resulted in the formation of a total of 900 FI regions.

For the first stage of sampling, each of the FI regions was partitioned into small geographic areas composed of adjacent Census blocks. These geographic clusters of blocks are referred to as *segments*, but were actually the primary sampling units (PSUs) for the new 50-State design. A sample *dwelling unit* in the NHSDA refers to either a housing unit or a group quarters listing unit, such as a dormitory room or a shelter bed. To support the overlapping sample design and any special supplemental samples or field tests that SAMHSA might wish to conduct, segments were formed to contain a minimum of 175 dwelling units.<sup>2</sup>

Before selecting sample segments, additional implicit stratification was achieved by sorting the first-stage sampling units by a metropolitan statistical area/socioeconomic status (MSA/SES) indicator<sup>3</sup> and by the percentage of the population who are non-Hispanic and white. Within each FI region, a large segment sample was selected with probabilities proportional to size to serve as a pool of segments for the coordinated 5-year design and to allow for partial replacement of the segment sample each year. A subsample of eight area segments was selected for 2000; the sample of eight segments was further partitioned into four samples of two segments each and assigned to the four quarterly survey periods. Within each FI region, one segment per quarter was a repeat segment, retained from the 1999 sample, and one segment per quarter was a new segment that remained in the sample for 2000 and 2001.

### **Selection of Dwelling Units**

The sample design required an approximately equal number of persons in three age groups: 12 to 17 years, 18 to 25 years, and 26 years or older. To improve the precision of the estimates, the sample allocation process targeted five age groups: 12 to 17 years, 18 to 25 years, 26 to 34 years, 35 to 49 years, and 50 years or older. Here the allocation among the three age groups in the 26 years or older group was done in such a way as to increase precision while maintaining approximately the same sample size as the 12 to 17 and 18 to 25 age groups. The

---

<sup>2</sup>Dwelling unit counts were obtained from the 1990 Decennial Census data supplemented with revised population counts from Claritas.

<sup>3</sup>Four categories were defined: (1) MSA/low SES, (2) MSA/high SES, (3) non-MSA/low SES, and (4) non-MSA/high SES.

size measures used in selecting the area segments were coordinated with the dwelling unit and person selection process so that a nearly self-weighting sample could be achieved in each of the five age groups. Departures from the self-weighting objective occurred for several reasons, including the following:

advance projections on the number of dwelling units did not accurately reflect the current housing inventory;

maximum dwelling unit sample sizes were preset to control the interviewer workload and to allow unused addresses to be available for the next year's survey; and

the person selection probabilities were constrained so that no more than two persons could be selected per dwelling unit.

An iterative sample allocation process was followed to adjust for these additional constraints. In addition, the dwelling unit sample allocation in each area segment was adjusted to allow for dwelling unit eligibility, for screening nonresponse, and for person nonresponse.

In advance of the survey period, specially trained listers had visited each area segment and listed all addresses for housing units and eligible group quarters units in a prescribed order. Systematic sampling was used to select the allocated sample of addresses from each segment.<sup>4</sup>

## **Selection of Persons**

During each quarterly survey, FIs visited each sample address to determine dwelling unit eligibility, to list all eligible persons at the address, to select the sample of persons to be interviewed, and to conduct interviews. In addition, the interviewers followed special "half-open" interval procedures to identify any new (since the time of listing) housing or any dwelling units missed during the advance listing process. Any new or missed dwelling units following immediately after a sample dwelling unit and up to, but not including, the next initially listed address in the prescribed order of listing were also included in the sample.

The interviewers used a handheld computer to record the results of the dwelling unit screening process and to select the sample of respondents. They recorded the results of each call, the final eligibility status of the dwelling unit, and information on new and missed dwelling units. If a sample address was an eligible occupied dwelling unit, they also conducted a screening interview to identify and roster all survey-eligible persons residing at the address. When the roster was complete, the computer was programmed to select the sample of persons to be interviewed using parameters specified for that area segment and a random number specified for that address.

---

<sup>4</sup>This had the effect of creating noncompact clusters (selection from a list), which differ from compact clusters in that not all units within the cluster are included in the sample. Although compact cluster designs are less costly and more stable, a noncompact cluster design was used because it provides for greater heterogeneity of dwellings within the sample. Also, social interaction (contagion) among neighboring dwellings is sometimes introduced with compact clusters (see L. Kish, 1965, *Survey Sampling*, New York: John Wiley).

Data collection progress was monitored during each quarterly survey by State. Small reserve samples were held back each quarter so that the assigned sample size could be adjusted if necessary during the course of data collection.

## **Data Collection and Response Rates**

The fieldwork for the 2000 NHSDA was directed by senior RTI staff members. RTI maintained a field staff of approximately 1,000 FIs to collect the data.

As noted above, a total final sample of 71,764 computer-assisted interviews was obtained for the 2000 survey. Strategies for ensuring high rates of participation resulted in a weighted screening response rate of 93 percent and a weighted interview response rate for the CAI of 74 percent. (Note that these response rates reflect the original sample, not the subsampled data file referenced in this document.)

Throughout the course of the study, respondent anonymity and the privacy of responses were protected by separating identifying information from survey responses. Respondents were assured that their identities and responses would be handled in the strictest compliance with Federal law. As discussed above, the questionnaire itself and the interviewing procedures were designed to enhance the privacy of responses, especially during segments of the interview in which questions of a sensitive nature were posed. Answers to sensitive questions were gathered using ACASI. During ACASI portions of the interview, respondents listened to prerecorded questions through headphones and entered their responses directly into a computer without interviewers knowing how they were answering.

## **Weighting Procedures**

The estimates yielded by the NHSDA are based on sample survey data rather than on complete data for the entire population. This means that the data must be weighted to obtain unbiased estimates for drug use in the population represented by the 2000 NHSDA. The "final sampling weight" of the  $i^{\text{th}}$  respondent, say  $w_i$ , can be interpreted as the number of persons in the NHSDA target population represented by the  $i^{\text{th}}$  respondent. The sum of the weights over all respondents is used to estimate the size of the total target population:

$$\sum_i w_i \text{ estimated size of target population,} \quad (1)$$

where the summation is over all respondents in the 2000 NHSDA.

The "basic sampling weights" for the 2000 NHSDA are equal to the inverse of the probabilities of selection of sample respondents. In other words, the smaller a respondent's chance of entering the sample, the larger the weight of that respondent is in the calculation of unbiased estimates for the target population. The probability of selection of a respondent can be computed as the product of three stagewise sampling probabilities. Specifically, the probability

of selecting respondent  $i$  equals the product of (a) the probability of selecting respondent  $i$ 's segment given the State and FI region in which it is located, (b) the probability of selecting respondent  $i$ 's dwelling unit given the selection of his or her segment, and (c) the probability of selecting respondent  $i$  within that selected dwelling unit.

To obtain the full sample "final NHSDA weights," the basic sampling weights were adjusted to take into account dwelling unit-level and individual-level nonresponse. These weights were further adjusted to ensure consistency with intercensal population projections obtained from the U.S. Bureau of the Census (see <http://www.census.gov/> and [www.census.gov/population/www/projections/st\\_yr95to00.html](http://www.census.gov/population/www/projections/st_yr95to00.html)).

*For the public use file, a portion of the records was randomly subsampled from the original file and removed to introduce uncertainty in a "potential intruder's" mind while reducing the probability that any known respondent was in the public use file (see "Confidentiality of Data," page i-17).* Therefore, the weights of the members of the remaining sample were subsequently adjusted for subsampling. The weights were then calibrated to known totals from the full analytic file in order to increase precision. (See the section on Confidentiality of Data for more details.)

## **Contents and Organization of the 2000 NHSDA Public Use File**

### **Data File Description**

The file described here is made available as an ASCII file with 1,866 variables and 58,680 observations. Three programs are made available to read the ASCII file into SAS, SPSS, or ☐ ☐ Stata. The file is also made available as a SAS transport (XPORT) file, SPSS portable file, and ☐ ☐ Stata system file. The ASCII file and programs are available from SAMHDA at ☐ ☐ <http://datafiles.samhsa.gov>.

The overall organization of the file is shown in the Table of Contents of this document. Edited data from core drug modules make up the first portion of the file. Edited data from the noncore self-administered modules and demographic questions are in later sections. These variables contain missing data; see the section on Standard Code Conventions for a description of the codes given to different types of missing data. For each edited variable, the number of observations assigned a given missing data code are shown in the entry for that variable.

Imputation-revised drug use variables, as well as selected recoded versions of these variables, are included for core drug use variables. These imputed and recoded drug use variables are in separate sections following the edited core drug use variables. The recoded drug use variables include indicators for lifetime, past year, and past month substance use. The imputation-revised core drug use variables served as the starting point for the recoded core drug use variables. Imputation-revised core and noncore demographic variables also are included toward the end of the codebook. Missing values for all imputation-revised variables have been imputed using the statistical imputation procedures described below. Imputation indicators are provided for each variable so that users may easily determine whether an observation contains data from the questionnaire or an imputed value. *Where imputed or recoded variables are*

*provided, users are encouraged to use them to produce estimates rather than raw or edited variables from the interview.*

Variables containing the original responses to the recency-of-use and 12-month frequency-of-use questions are presented in the codebook section on Selected Unedited Variables. These are included to show how respondents originally answered these questions prior to the data being edited for consistency with related items in that drug's section of the interview.

Variables from self-administered noncore modules comprise the next major section in the codebook. In addition to edited variables in these noncore modules, recoded variables are in some of these sections. For example, edited variables from the section of the interview pertaining to symptoms of dependence or abuse (Substance Dependence and Abuse section in this codebook) were used to create recoded summary measures of dependence on alcohol or other drugs. Unlike variables in the core sections, however, imputation for missing data generally was not done prior to the recoding of noncore variables. Consequently, noncore recoded variables may still have missing values.

For recoded variables, the missing data codes contained in the source variables and defined in the Standard Code Convention section of this codebook were often recoded to the standard missing code (.). It is intended that cases containing these missing codes be excluded from an analysis.

A map file also is included to aid users in determining associations between different types of variables (Appendix G). The map file gives a correspondence between question names in the CAI instrument specifications (see <http://www.samhsa.gov/oas/nhsda/methods.cfm> and <http://datafiles.samhsa.gov>), edited variables, and recoded variables.<sup>5</sup>

In many instances, the codebook itself also indicates in parentheses the question name that corresponds to an edited variable. However, one important feature of the transition to CAI in 1999 was that respondents could be routed to different versions of a question depending on prior information from the interview. For this reason, individual variables do not exist on this file that correspond to every question in the interview. For example, respondents who initiated use of a drug within 1 year of their current age were asked more detailed questions about the year and month in which they first used that drug. Depending on their age, date of birth, and interview date, respondents could be routed to one of three possible questions to identify the year in which they first used a drug (e.g., CG04a, CG04b, or CG04c for cigarettes, as shown in the specifications at <http://www.samhsa.gov/oas/nhsda/methods.cfm> and <http://datafiles.samhsa.gov>). Similarly, respondents could be routed to one of two possible questions to determine the month in which they first used a drug. To facilitate analysis, therefore, responses from these multiple year-of-first-use and month-of-first use questions were combined into one single year-of-first use variable and one single month-of-first use variable.

---

<sup>5</sup>Some section names in the CAI instrument specifications have been changed for this codebook to make the contents of the section clearer to data file users. For example, the Substance Dependence and Abuse section of this codebook corresponds to the Drug Dependence and Withdrawal section in the instrument specifications.

## Variable Naming Conventions

Variable names are mnemonics related to the meaning of each variable. The user is advised, however, that the transition to a CAI mode of data collection beginning in 1999 marked an important change not only in the conduct of the survey but also in the data that the survey yielded. Therefore, *data collected with the CAI mode beginning in 1999 are generally not comparable with data collected with the old PAPI mode in prior years, even if the basic wording or content of a question was the same in both the CAI and PAPI instruments.*

As much as possible, however, CAI variables were named identically to the PAPI variables when the content of questions was identical or similar in CAI and PAPI. Use of variable names in CAI that had previously been used in PAPI preserved the historical meaning of key variables, such as those pertaining to the most recent time that respondents used a particular drug.

## Usable Cases

A key step in the data processing procedures established the minimum item response requirements in order for cases to be retained for weighting and further analysis (i.e., "usable" cases). These procedures were designed to eliminate cases with unacceptable levels of item nonresponse (i.e., missing data), thereby retaining cases with lower levels of missing data and reducing the amount of statistical imputation needed for any given record.

The usable case criteria established for CAI were based on the completeness of information that respondents provided about their lifetime use or nonuse of different drugs. In CAI, respondents were asked more detailed questions about different drugs only if they reported lifetime use of that drug (or lifetime use of one or more drugs within a broader category, such as hallucinogens) on an initial "gate" question.<sup>6</sup> Consequently, whether a CAI respondent was a lifetime user or nonuser of the drugs of interest could be readily determined by reviewing the respondent's answers to the "gate" question on lifetime use of that drug (or category of drugs).

The requirements for a CAI record to be considered usable are noted below.

1. The lifetime cigarette question (i.e., "Have you ever smoked part or all of a cigarette?") had to have been answered as "yes" or "no." This requirement was set so that lifetime use or nonuse would be fully defined for at least one substance. Consequently, data about lifetime use or nonuse of cigarettes could be used in subsequent statistical imputations for other drugs where lifetime use/nonuse was undefined.

---

<sup>6</sup>In all modules except those pertaining to hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives, the logic for asking more detailed questions about use of that drug was based on the answer to a single "yes/no" question (e.g., "Have you ever, even once, used marijuana or hashish?"). In the hallucinogens through sedatives modules, the logic for asking more detailed questions about use of that category of drugs was based on respondents' answers to multiple "yes/no" questions about the lifetime use or nonuse of specific drugs within that category (e.g., lifetime use or nonuse of the specific hallucinogens LSD, PCP, peyote, mescaline, psilocybin/mushrooms, Ecstasy, or "any other" hallucinogen).

2. Responses to questions on at least nine (9) of the following additional drugs had to contain information about lifetime use or nonuse: (a) chewing tobacco, (b) snuff, (c) cigars, (d) alcohol, (e) marijuana, (f) cocaine (in any form), (g) heroin, (h) hallucinogens, (i) inhalants, (j) pain relievers, (k) tranquilizers, (l) stimulants, and (m) sedatives. Crack cocaine was not included in the usable case rule because the logic for asking about crack cocaine was dependent upon the respondent having answered the lifetime cocaine question as "yes." Although the CAI instrument also asked about pipe tobacco, this was not included in the usable case rule because there was only one other question about pipe tobacco in addition to the lifetime pipe tobacco use question.

The 2000 interview also included follow-up probes for respondents who initially refused to answer a gate question. Follow-up probes were included in 2000 for the following modules that were relevant to the usable case rule: cigarettes, chewing tobacco, snuff, cigars, alcohol, marijuana, cocaine, heroin, and the specific hallucinogens LSD and PCP. If respondents changed their initial refusal to a response of "yes" or "no," they were considered to have provided usable data to that drug's gate information.

For the hallucinogens through sedatives sections, respondents reported about use or nonuse of specific drugs within that category. For these sections, the requirement for reporting of lifetime use or nonuse was considered to have been satisfied if at least one lead lifetime question in the series was answered as "yes" or "no" (e.g., if at least one question in the hallucinogen series was answered as "yes" or "no" for hallucinogens).

In addition, the CAI program terminated interviews during the initial demographics questions if respondents were ineligible for the survey (i.e., under age 12 or on active duty in the U.S. military). These ineligible cases by definition did not meet the usable case criteria because the interviews were terminated before the respondents were asked the first cigarette use question.

## **Logical Editing**

For selected key variables, response data were reviewed to identify and address inconsistent data among related variables or to replace missing data with nonmissing values. The routing logic in the CAI instrument reduced the opportunities for respondents to give inconsistent answers by skipping respondents past questions that did not apply to them. The occurrence of inconsistent data was further reduced through the use of consistency checks built into the CAI program that prompted respondents to resolve inconsistencies between related items. Nevertheless, there still were limited situations in which respondents could answer one question in a manner that was inconsistent with their answer to a previous question.

Logical editing of data was first conducted for many of the variables. This procedure used data within a respondent's record to identify and address inconsistencies among related variables within a given module of the interview (e.g., within the hallucinogens section). As part of this

procedure, variables were identified that had been legitimately skipped because the condition(s) for asking the questions did not apply.

As a general principle when editing data in all the modules, responses from one module (e.g., hallucinogens) were not used to edit variables in another module (e.g., inhalants).<sup>7</sup> For this reason, data in one module may not be completely consistent with data in other modules. Subsequent discussion about editing in this section focuses on key drug use variables.

### **Editing Procedure for Drug Use Variables**

Logical editing and processing of drug use variables in the tobacco through the sedatives modules first involved identifying whether respondents had ever used or never used the drug of interest. That included situations in which respondents initially refused to answer a question about their lifetime use of a drug but then changed their answer to "yes" or "no" on follow-up. If respondents did not provide sufficient information about their use or nonuse of a particular drug (or drug category), their final status was assigned through statistical imputation procedures. If values pertaining to lifetime use or nonuse of a given drug were changed through the editing procedures, this editing was indicated through special codes that indicated that a response was logically inferred; documentation for these codes includes the phrase "LOGICALLY ASSIGNED." In the hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives modules, for example, respondents who did not report lifetime use of a specific drug (e.g., LSD) but specified use of it as "some other drug" were logically inferred to be lifetime users of that drug. In the psychotherapeutics modules (i.e., pain relievers, tranquilizers, stimulants, and sedatives), respondents whose only reported lifetime use involved over-the-counter medications were logically inferred to have never used that particular prescription-type psychotherapeutic drug.

Following determination of lifetime use or nonuse of a given drug, edits of the variables that established when respondents last used a drug of interest were probably the most critical. These edited recency-of-use variables were the precursors for the final, imputed measures that established the prevalence of use in the past 30 days, past 12 months, and lifetime.

The 2000 interview included follow-up probes for respondents who were lifetime users of a given drug but did not know or refused to report when they last used it. Respondents who initially did not know when they last used a drug were asked to give their "best guess" of when they last used it. Respondents who initially refused to report when they last used a drug were asked to reconsider answering the question. If respondents changed their initial answer of "don't know" or "refused" in response to these probes, the editing procedures incorporated data from these probes into the final, edited recency-of-use variables. For example, if respondents initially refused to report when they last used a drug but then reported last using it more than 30 days ago

---

<sup>7</sup>One exception to the principle of not editing across modules involved situations where responses in one module governed whether respondents were asked questions in another module. For example, if respondents reported never using heroin, they were not asked questions in the noncore treatment module about treatment for heroin. Consequently, codes could be assigned to indicate that the respondents skipped out of the heroin treatment data because they had never used it.

but within the past 12 months, their edited recency indicated use in that period, in the absence of any information that was inconsistent with what they reported in the probe (see below).

Situations were identified and flagged in which there were potential inconsistencies between a respondent's answer to a drug's recency question (or the answer in a follow-up probe) and other data in that module. For example, it would be inconsistent for a respondent to report last using a drug "more than 12 months ago" but also to report having first used it at his or her current age. These inconsistencies were then addressed by statistically imputing final values for the affected recency variable and the other variable(s) where the data were inconsistent with the respondent's original answer to the recency question.

Again, if values pertaining to the period when respondents last used a drug were changed through the editing procedures, special codes were assigned to indicate that these edits had been done. The documentation for these codes included the phrase "LOGICALLY ASSIGNED." For example, a code of 8 in a drug's recency-of-use variable means "Used at some point in the past 12 months LOGICALLY ASSIGNED." Specifically, if a respondent reported using a drug more than 30 days ago but within the past 12 months but other data suggested that the respondent may have used the drug more recently, this code of 8 indicated that it could at least be inferred that the respondent was a user in the past 12 months (and potentially more recently). Similarly, a code of 9 ("Used at some point in the lifetime LOGICALLY ASSIGNED") indicated that the respondent was potentially a user in any period that was asked about for that particular drug, including the past 30 days. In particular, respondents were assigned a code of 9 if they initially answered "don't know" or "refused" to a drug's recency question and continued on follow-up to answer "don't know" or "refused" regarding when they last used it.

### **Standard Code Conventions**

Generally, the following codes have the same (or consistent) meanings across all variables. Exceptions are noted in the documentation for individual variables.

91 or 991 or 9991, etc.	=	NEVER USED [DRUG(s) OF INTEREST]
93 or 993 or 9993, etc.	=	USED [DRUG] BUT NOT IN THE PERIOD OF INTEREST
94 or 994 or 9994, etc.	=	DON'T KNOW
97 or 997 or 9997, etc.	=	REFUSED
98 or 998 or 9998, etc.	=	BLANK (i.e., not answered; not asked the question)
99 or 999 or 9999, etc.	=	LEGITIMATE SKIP

The following analogous codes also were assigned as part of the logical editing process:

81 (or 981, 9981, etc.)	=	NEVER USED [DRUG(s) OF INTEREST] Logically assigned
83 (or 983, 9983, etc.)	=	USED [DRUG] BUT NOT IN THE PERIOD OF INTEREST Logically assigned
85 (or 985, 9985, etc.)	=	BAD DATA Logically assigned (i.e., usually inconsistent with other data)
89 (or 989, 9989, etc.)	=	LEGITIMATE SKIP Logically assigned

The codes of 81, 83, 85, and 89 were given values in the 80s to signify that existing values were overwritten during editing. For example, if a respondent was somehow routed into the youth experiences module but that respondent was subsequently classified as being 18 or older, any answers that the respondent gave in the youth experiences module were overwritten with codes of 89 (or 989, etc.). These codes signify that this adult respondent logically was not eligible to be asked the youth experiences questions.

Codes of 85 (or 985, etc.), 94 (or 994, etc.), 97 (or 997, etc.), and 98 (or 998, etc.) are codes for missing data. In particular, codes of 98 (i.e., blank) could occur in the data for the following reasons:

the respondent broke off the interview before reaching a particular question or section;

the CAI program allowed the respondent to hit the ENTER key without providing a response (typically, in situations where respondents were asked to specify something, such as the name of some other drug that they had used); or

the CAI program skipped the respondent past a question, but there was some uncertainty as to whether the skipped question applied or did not apply to the respondent (e.g., if subsequent questions about a drug were skipped because the respondent did not know whether he or she ever used that drug).

## Statistical Imputation

Statistical imputation refers to the substitution of acceptable artificial values for missing values. These imputed values cannot be directly distinguished from nonimputed values. Using statistical imputation, missing data were replaced with nonmissing values for selected variables. These variables can be identified in the codebook by their labels, within which can be found the words "IMPUTATION REVISED." In addition, most imputation-revised variables have names with the prefix "IR." Associated indicator variables tell the user which values are imputed and which ones are not. These indicator variables have the words "IMPUTATION INDICATOR" in

their labels and are identified with the prefix "II." For some imputation-revised variables, additional imputation indicators are available, identified with the prefix "II2," giving more details about the source of the imputed or logically assigned value.

The levels within the imputation-revised variables were limited to the valid responses in the interview itself. If neither editing nor imputation was required for a particular characteristic, the levels for the edited and imputation-revised variables were the same, with each level corresponding to a valid interview response. If an edited variable had a logically assigned value for which no imputation was required, that logically assigned value was converted to the associated valid interview response in the imputation-revised variable. Finally, levels in the edited variable that did not correspond to a valid interview response indicated that the information available for that respondent was incomplete and, consequently, imputation was required. These levels were replaced by imputed values corresponding to valid interview responses, which were consistent with any preexisting information related to that variable. Examples of levels indicating incomplete information include "bad data," "don't know," and "refused." Also, in the case of recency of use, some levels in the edited variable described a more general recency than was designated from a valid interview response, which, in the imputation-revised variable, were replaced by imputed values consistent with the general recency level.

Prior to 2000, for all demographic variables requiring imputation in the NHSDA, missing data were imputed using an unweighted sequential hot-deck procedure, with various sorting and classing variables. In 2000, the only demographic variables to which this method was applied were education level and employment status. The imputation method applied to all other demographic variables was predictive mean neighborhoods (PMN), a procedure developed specifically for the NHSDA. A combination of model-assisted and nearest neighbor hot-deck imputation methods, PMN is described in detail, along with its application to the NHSDA, in the 2000 Methodological Resource Book.<sup>8</sup>

To protect confidentiality, the imputation-revised race and Hispanic origin variables were not included on this file. This information is provided in a recoded variable that combines race and Hispanic ethnicity (NEWRACE2). The original version of the imputation-revised education level variable was also omitted from this file, to be replaced by a recoded version (IREduc2). However, the original marital status variable (IRMARIT) and employment status variables (EMPSTAT3, EMPSTAT4, and EMPSTATY) are included. Although no missing data were imputed for gender, the potential for missing data makes an "IR" prefix necessary for this variable (IRSEX).

In the 2000 CAI instrument, the core drug use variables were recency of use, frequency of use in the past 12 months, frequency of use in the past 30 days, and age at first use. Imputation of missing values in these core drug use variables was accomplished using PMN, as was true in

---

<sup>8</sup>RTI. (2002, July). *2000 National Household Survey on Drug Abuse: Methodological resource book* (prepared for the Substance Abuse and Mental Health Services Administration, Office of Applied Studies, under Contract No. 283-98-9008, Deliverable No. 28, RTI 7190). Research Triangle Park, NC. See documentation regarding Imputation at <http://datafiles.samhsa.gov>.

1999. The PMN method was also used to impute missing values in many of the income, insurance, and roster-derived household composition variables in the 2000 CAI instrument.

## Statistical Significance of Differences

The NHSDA's redesign has improved the precision of its estimates of substance use prevalence, but the redesign has also made it difficult to assess long-term trends. *As noted previously, it is not considered appropriate to make comparisons of the 1999 and later CAI estimates with earlier NHSDA estimates to assess trends in substance use, due to the major differences between the CAI and PAPI methods. If comparisons such as these are made, it is recommended that they be interpreted with caution.*

Customarily, the observed difference between estimates is evaluated in terms of its "statistical significance," which refers to the probability that a difference as large as that observed would occur due to random error in the estimates if there were no difference in the prevalence rates for the population groups being compared. The significance of observed differences is generally reported at the 0.05 and 0.01 levels.

To compare the prevalence of drug use between survey year prevalence estimates, year1 and year2, one can test the null hypothesis (no difference in the year1 and year2 prevalence rates) against the alternative hypothesis (there is a difference in prevalence rates) using the standard difference in proportions test, expressed as follows :

$$Z = \frac{\hat{p}_1 - \hat{p}_2}{\sqrt{\text{var}(\hat{p}_1) + \text{var}(\hat{p}_2) - 2\text{cov}(\hat{p}_1, \hat{p}_2)}},$$

where

$\hat{p}_1$  = year1 estimated proportion,

$\text{var}(\hat{p}_1)$  = variance estimate for  $\hat{p}_1$ ,

$\hat{p}_2$  = year2 estimated proportion,

$\text{var}(\hat{p}_2)$  = variance estimate for  $\hat{p}_2$ , and

$\text{cov}(\hat{p}_1, \hat{p}_2)$  = covariance between  $\hat{p}_1$  and  $\hat{p}_2$ .

Under the null hypothesis, Z is asymptotically distributed as a normal random variable. Calculated values of Z can therefore be referred to as the unit normal distribution to determine the corresponding probability level (i.e., p value). Because there is a 50 percent overlap in the sampled segments between successive years of the NHSDA samples (see the section on Survey Methodology (1999 Survey Redesign)), the covariance term in the formula for Z will, in general, be greater than zero. As described below, commercially available variance estimation software

can be used to compute estimates of  $Z$  along with the associated  $p$  values such that the covariance term is calculated by taking the sample design into account. A similar procedure and formula for  $Z$  can be used for estimated totals.

Two non-independent prevalence estimates from the same data year can be compared using the above formula. Using this formula directly and ignoring the covariance term, which is usually small and positive, will result in a somewhat conservative test of hypotheses that will sometimes fail to establish statistical significance when in fact it exists. Survey analysis software can calculate such within year comparison estimates so that the covariance term is calculated by accounting for the sample design.

## **Use of Sample Weights and Sample Design Variables**

Due to various adjustments, such as those for nonresponse and poststratification, the 2000 NHSDA sample is not self-weighting. *Analysts are advised to use the sample weight when attempting to use the NHSDA data to draw inferences about the target population or any subdomain of the target population.* All estimates published in SAMHSA reports (such as the Summary of Findings from the 2000 NHSDA) are weighted using the final analysis weight for the full sample. For the public use file, the corresponding final sample weight is denoted as ANALWT\_C; C for confidentiality protection. This sample weight represents the total number of target population persons each record on the file represents. Note that the sum of ANALWT\_C, over all records on the data file, represents an estimate of the total number of people in the target population. Additional information on the full sample weighting procedures and the sample weight components may be found in the 2000 Methodological Resource Book available from SAMHSA (see footnote 8).

*The public use file contains two sample design variables in addition to ANALWT\_C. These variables are VESTR (variance estimation (pseudo) stratum) and VEREP (variance estimation (pseudo) replicate within each stratum) and must be used to estimate variances and standard errors when using commercially available variance estimation software packages.* The SAMHDA Data Analysis System (<http://datafiles.samhsa.gov>) also has this capacity and is available for public use. However, the data analysis software in SAMHDA uses the terms Stratum and Cluster, which correspond respectively to VESTR and VEREP in the public use file.

## **Confidentiality of Data**

To protect the confidentiality of respondents to the 2000 NHSDA, the full analytic file of approximately 72,000 persons has been modified in a number of ways. All directly identifying information on the file has been eliminated. In addition, Census region, State, and other geographic identifiers have been removed. This is an individual record file, and the household link between two persons who responded from the same household has been removed.

All variables on the file were reviewed for the possibility of identifying the respondent by combining a number of them at one time. Variables considered to have a high potential of personal identification, as well as a high value for analysis, were treated by standard procedures

of categorization and top-and-bottom coding. In addition, two other techniques were used to introduce sufficient uncertainty for any person who attempted to disclose an individual identity and the confidential responses. First, a portion of the records was randomly subsampled and removed from the file to reduce the probability that any known respondent was in the public use file. Second, also on a random basis, a sample of records was designated, and variables were substituted from a similar donor record. This process makes it difficult for a "data snooper" to be certain that any record corresponds to a specific individual because some of the variables used to identify the record may come from different individuals. The result is that there is a very small probability of identifying an individual from the file.

Subsampling and substitution were done while simultaneously constraining the resultant file to a minimal increase in bias and a minimal decrease in precision for numerous estimates of drug use prevalence across numerous domains. In addition, the weights on the final file were recalibrated to known totals from the full analytic file so as to minimize the decrease in precision owing to the two techniques.

A number of variables were reviewed after the above process was undergone in order to determine the impact of these techniques on the bias and precision of estimates compared with the full file. These variables included both variables for which partial records were substituted, as well as other variables. In addition, the precision was studied for over 340 variables/subdomains. The difference in the estimates from the full analytic file and the public use file was typically about plus or minus 1 or 2 percent. In a few cases, it was higher, the highest being minus 55 percent for SEDFLAG (sedatives ever used) in domain Non-Hispanic Native American/Alaska Native. The decrease in precision was typically below 7 percent on average, with HERYR (heroin past year use) and ALCMON (alcohol past month use) being the only exceptions, at about 10 to 11 percent increase of the standard error.

### **Estimation of Parameters and Their Standard Errors**

The sampling weights on the public use file were adjusted for subsampling and calibrated with respect to 6 drug use prevalence measures and 34 demographic domains. Survey analysis software can be used with these weights, along with VESTR and VEREP to estimate various parameters and their standard errors. Because of calibration, some of the prevalence estimates for certain demographic domains from the public use file will be identical to the full sample estimates. Tables 1 and 2 show prevalence estimates and their standard errors for demographic domains that were not included in the calibration constraints.

Table 1 shows the ratio of prevalence estimates and standard errors from the public use file subsample to the full sample for past month marijuana use, a relatively high prevalence drug. The results are shown for seven demographic domains.

Table 2 shows the same ratios for past year heroin use, a relatively low prevalence drug. Only six of the seven demographic domains are presented because the Native Hawaiian/other Pacific Islander domain had a 0 heroin prevalence estimate.

**Table 1. Past Month Marijuana Prevalence and Standard Error Ratios of Public Use File Subsample to the Full Sample, by Seven Domains**

Domain	Prevalence Ratio	Standard Error Ratio
Non-Hispanic Native American/Alaska Native	1.00	0.99
Non-Hispanic Native Hawaiian/other Pacific Islander	1.00	1.09
Non-Hispanic Asian	1.05	1.19
Non-Hispanic more than one race	0.99	1.05
Household has four members	1.02	1.19
Household has five members	0.98	0.97
Household has six or more members	0.98	0.99

Note: Ratio = [Public use file subsample estimate / Full sample estimate].

Source: SAMHSA, Office of Applied Studies, National Household Survey on Drug Abuse, 2000.

**Table 2. Past Year Heroin Prevalence and Standard Error Ratios of Public Use File Subsample to the Full Sample, by Six Domains**

Domain	Prevalence Ratio	Standard Error Ratio
Non-Hispanic Native American/Alaska Native	0.64	0.65
Non-Hispanic Asian	0.64	0.59
Non-Hispanic more than one race	1.22	1.21
Household has four members	1.05	1.18
Household has five members	0.74	0.77
Household has six or more members	0.99	1.28

Note: Ratio = [Public use file subsample estimate / Full sample estimate].

----	----	-----	----	----
(CG25)		These next questions are about your use of snuff, sometimes called dip. Snuff is a finely ground form of tobacco that usually comes in a container called a tin. You can use snuff by placing a pinch or dip in your mouth between your lip and gum or between your cheek and gum. Snuff can also be inhaled through the nose. Snuff is sold in both loose form or in ready-to-use packets.		
		Have you ever used snuff, even once?		
		NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

----	----	-----	----	-
(AL01)		ALCOHOL ----- These questions are about drinks of alcoholic beverages. Throughout these questions, by a "drink," we mean a can or bottle of beer, a glass of wine or a wine cooler, a shot of liquor, or a mixed drink with liquor in it. We are not asking about times when you only had a sip or two from a drink.  Have you ever, even once, had a drink of any type of alcoholic beverage? Please do not include times when you only had a sip or two from a drink.  NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.		
ALCEVER	2	EVER HAD DRINK OF ALCOHOLIC BEVERAGE		
		1 = Yes.....	41861	71.34

(LS01A)		HALLUCINOGENS ----- The next questions are about substances called hallucinogens. These drugs often cause people to see or experience things that are not real.  A list of some common hallucinogens is shown below. These and many other substances that people use as hallucinogens are often known by street names, and we can't list them all. Please take a moment to look at the substances listed below so you know what kind of drugs the next questions are about.  LSD, also called "acid" PCP, also called "angel dust" or phencyclidine Peyote Mescaline Psilocybin "Ecstasy," also called MDMA  Have you ever, even once, used LSD, also called "acid"?  NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

(IN01A)		INHALANTS			
		-----			
		These next questions are about liquids, sprays, and gases that people sniff or inhale to get high or to make them feel good. We are not interested in times when you inhaled a substance accidentally - such as when painting, cleaning an oven, or filling a car with gasoline.			
		The questions use the term "inhalant" to include all the things listed below, as well as any other substances that people sniff or inhale for kicks or to get high. Take a moment to look at the substances listed below so you know what kinds of liquids, sprays, and gases these questions are about.			
		Amyl nitrite, "poppers," locker room odorizers, or "rush"			
		Correction fluid, degreaser, or cleaning fluid			
		Gasoline or lighter fluid			
		Glue, shoe polish, or toluene			
		Halothane, ether, or other paint solvents			
		Lighter gases, such as butane or propane			
		Nitrous oxide or "whippets"			
		Spray paints			
		Other aerosol sprays			
		Have you ever, even once, inhaled amyl nitrite, "poppers," locker room odorizers, or "rush" for kicks or to get high?			
AMYLNIT	2	EVER INHALED AMYL NITRITE, "POPPERS," RUSH, ETC.

(PR01)		PAIN RELIEVERS		
		-----		
		NOTE: When respondents say "Don't know" or refuse to answer consistency check PRCC06 (Please answer this question again. Think about the first time you used any prescription pain reliever that was not prescribed for youàHow old were you the first timeà), the CAI program is supposed to go to PR09 (How long has it been since you last used any prescription pain reliever...), skipping the month and year of first use questions for new initiates (PR07a-PR08b). Due to a problem with the CAI program, these respondents were erroneously getting questions PR07a-PR08b. This was fixed 6/22/2000. Variables affected by this patch are denoted by an '*' to the left of the variable name.		
		Now we have some questions about drugs that people are supposed to take only if they have a prescription from a doctor. We are only interested in your use of a drug if:		
		- the drug was not prescribed for you, or		
		- you took the drug only for the experience or feeling it caused.		
		These questions are about the use of pain relievers. We are not interested in your use of "over-the-counter" pain relievers such as aspirin, Tylenol, and Advil that can be bought in drug stores or grocery stores without a doctor's prescription.		
		Card A shows pictures of some different kinds of prescription pain relievers and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription pain relievers that were not prescribed for you or that you took only for the experience or feeling they caused. Please look at Card A carefully as you answer the next questions.		
		Have you ever, even once, used Darvocet, Darvon, or Tylenol with codeine that was not prescribed for you or that you took only for the experience or feeling it caused?

-----	----	-----	----	-
(TR01)		TRANQUILIZERS		
		-----		
		NOTE: When respondents say "Don't know" or refuse to answer consistency check TRCC06 (Please answer this question again. Think about the first time you used any prescription tranquilizer that was not prescribed for you...How old were you the first timeà), the CAI program is supposed to go to TR09 (How long has it been since you last used any prescription tranquilizer...), skipping the month and year of first use questions for new initiates (TR07a-TR08b). Due to a problem with the CAI program, these respondents were erroneously getting questions TR07a-TR08b. This was fixed 6/22/2000. Variables affected by this patch are denoted by an '*' to the left of the variable name.		
		These next questions ask about the use of tranquilizers. Tranquilizers are usually prescribed to relax people, to calm people down, to relieve anxiety, or to relax muscle spasms. Some people call tranquilizers "nerve pills."		
		Card B shows pictures of some different kinds of prescription tranquilizers and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription tranquilizers that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card B carefully as you answer the next questions.		
		Have you ever, even once, used Klonopin or Clonazepam that was not prescribed for you or that you took only for the experience or feeling it caused?

(ST01)

STIMULANTS

NOTE: Respondents who said "Yes" only to lifetime Methamphetamine use (ST01=1) in the Stimulants section were only supposed to get routed through ST06 (How old were you the first time you used any prescription stimulant...caused?). However, due to an error in the CAI programming logic, these respondents were subsequently routed through both ST06 and ST14 (Now think only about your use of Methamphetamine, Desoxyn, or Methedrine. How old were you the first time you used Methamphetamine, Desoxyn, or Methedrine?). This error was fixed on 6/22/2000. Variables affected by this patch are denoted by an '\*' to the left of the variable name.

These questions ask about the use of drugs such as amphetamines that are known as stimulants, "uppers," or "speed." People sometimes take these drugs to lose weight, to stay awake, or for attention deficit disorders. We are not interested in the use of "over-the-counter" stimulants such as Dexatrim or No-Doz that can be bought in drug stores or grocery stores without a doctor's prescription.

Card C shows pictures of some different kinds of prescription stimulants and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription stimulants that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card C carefully as you answer the next questions.

Have you ever, even once, used Methamphetamine, Desoxyn, or Methedrine that was not prescribed for you or that you took only for the experience or feeling it caused? Methamphetamine is also known as crank, crystal, ice, or speed.

(SV01)		SEDATIVES		
		-----		
		<p>NOTE: When respondents say "Don't know" or refuse to answer consistency check SVCC06 (Please answer this question again. Think about the first time you used any prescription sedative that was not prescribed for you...How old were you the first time...), the CAI program is supposed to go to SV09 (How long has it been since you last used any prescription sedative...), skipping the month and year of first use questions for new initiates (SV07a-SV08b). Due to a problem with the CAI program, these respondents were erroneously getting questions SV07a-SV08b. This was fixed 6/22/2000. Variables affected by this patch are denoted by an '*' to the left of the variable name.</p> <p>These next questions ask about the use of sedatives or barbiturates. These drugs are also called "downers," or "sleeping pills." People take these drugs to help them relax or to help them sleep. We are not interested in the use of "over-the-counter" sedatives such as Somnex, Unisom, Nytol, or Benadryl that can be bought in drug stores or grocery stores without a doctor's prescription.</p> <p>Card D shows pictures of some different kinds of prescription sedatives and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription sedatives that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card D carefully as you answer the next questions.</p> <p>Have you ever, even once, used Methaqualone, Sopor, or Quaalude that was not prescribed for you or that you took only for the experience or feeling it caused?</p>

RECODED DRUG USE			PAGE:	153
LABEL	LEN	DESCRIPTION	FREQ	%
-----	----	-----	----	-
<p>The following three variables, CIGBRND2, CGRBRND2, SMKBRND2, were created with the intent to show the brand estimates in order from highest to lowest within the overall population. The most widely used brands for each tobacco product and the ranking of these brands were determined by examining weighted frequencies of the respective source variables among all users of that tobacco product. It should be noted that the brand ordering is based upon the ranking of the 2000 data. As a result, the 2000 ordering of the most often used tobacco brands differs slightly from the 1999 order. Once the brand ordering was determined, the analysis variables were created as defined below. For each of these tobacco brand variables, all persons who indicated no past month use were set to the SAS missing code and excluded from the analysis. The category "Other Brands" contains all past month users who reported other valid brands not otherwise defined in one of the other levels. The category "Unknown Brands" contains past month users who did not specify a specific tobacco brand. Variables of this type can also be created within demographic subgroups, by first examining weighted frequencies of the respective source variables among users defined by a demographic subgroup of interest.</p>

The variable CIGCMPNY indicates the companies that owned the labels of the cigarette brands that respondents reported using most often in the past 30 days. For brands that were sold to another company during the survey year, CIGCMPNY reflects which company owned the brand label for the majority of the year.

(RK01A)		RISK/AVAILABILITY ----- We are interested in your opinion about the effects of using certain drugs and other substances, about whether it's difficult or easy to get drugs, and the extent to which drugs are available in your neighborhood.  Please indicate how much you think people risk harming themselves physically and in other ways when they do each of the following activities.  If you're not sure, choose an answer for the amount of risk that comes closest to what you think might be true for that activity.  How much do people risk harming themselves physically and in other ways when they smoke one or more packs of cigarettes per day?

SUBSTANCE DEPENDENCE AND ABUSE

NOTE: For the edited SUBSTANCE DEPENDENCE AND ABUSE variables shown below, respondents were not asked the relevant questions if they did not report use of the substance within the past 12 months in the core questions. For alcohol and marijuana, infrequent users in the past 12 months (i.e., use on 5 or fewer days in the past 12 months) also were not asked the respective questions about these drugs. However, past year alcohol and marijuana users who did not report frequency of use were asked the dependence and abuse questions. For cocaine, heroin, and stimulants, respondents who did not report in the core modules that they used the substance of interest in the past 12 months still WERE asked SUBSTANCE DEPENDENCE AND ABUSE questions for these drugs if they reported use in the past 12 months in the SPECIAL DRUGS module. Substance use variables that were used to edit the variables in the SUBSTANCE DEPENDENCE AND ABUSE module were not fully imputed. If respondents were skipped out of SUBSTANCE DEPENDENCE AND ABUSE QUESTIONS for a particular substance because they did not know or refused to report when they last used that substance (or whether they ever used it), the relevant variables in the SUBSTANCE DEPENDENCE AND ABUSE module retained missing values.

Think about your use of cigarettes during the past 12 months as you answer these next questions.

During the past 12 months, was there a month or more when you spent a lot of your time getting or smoking cigarettes?

RECODED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

Due to changes in the dependence and withdrawal questions for the 2000 NHSDA, the dependence variable names have changed from what had previously been used in 1999. The following recoded dependence variables were defined based on the dependence criteria listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). Specific details for each of the 11 substance dependence variables are provided in Appendix D. A respondent was defined as having marijuana, inhalant, hallucinogen, or tranquilizer dependence (DEPNDRMJ, DEPNDINH, DEPNDHAL, DEPNDTRN) if the respondent reported a positive response to 3 or more of these 6 dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of the substance (XXXLOTTM=1 or XXXGTOVR=1)
- (2) Unable to keep set limits on substance use or used more often than intended (XXXKPLMT=2)
- (3) Needed to use substance more than before to get desired effects or noticed that using the same amount had less effect than before (XXXNDMOR=1 or XXXLSEFX=1)
- (4) Unable to cut down or stop using the substance every time he or she tried or wanted to (XXXCUTEV=2)
- (5) Continued to use substance even though it was causing problems with emotions, nerves, mental health, or physical problems (XXXEMCTD=1 or XXXPHCTD=1)
- (6) Reduced or gave up participation in important activities due to substance use (XXXLSACT=1)

An additional question pertaining to withdrawal symptoms was asked for the following 7 drugs: alcohol, pain relievers, cigarettes, cocaine, heroin, sedatives, and stimulants. The withdrawal question asked the respondent if they had experienced substance specific withdrawal symptoms at one time that lasted for longer than a day after they cut back or stopped using. The specific number and type of listed withdrawal symptoms varied by substance. A respondent was defined as having alcohol, pain reliever, cigarette, cocaine, heroin, sedative, or stimulant dependence (DEPNDALC, DEPNDANL, DEPNDICIG, DEPNDIOC, DEPNDHER, DEPNDSED, DEPNDSTM) if the respondent reported a positive response to 3 or more of the 7 dependence criteria (including the six

RECODED SUBSTANCE DEPENDENCE AND ABUSE			PAGE:	304
LABEL	LEN	DESCRIPTION	FREQ	%
-----	----	-----	----	-
		standard criteria listed above plus a seventh withdrawal symptom criteria.)		
		Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the substance dependence and withdrawal questions, it is possible for these dependence recode variables to be inconsistent with the imputed substance use and frequency of use variables. The types of inconsistencies that can occur differ by substance since different combinations of the skip logic criteria were used for each substance. Specific details about these inconsistencies are included in Appendix D.

		The next questions are about encounters with the police or the court system.		
		Not counting minor traffic violations, have you ever been arrested and booked for breaking the law?		
		Being 'booked' means that you were taken into custody and processed by the police or by someone connected with the courts, even if you were then released.

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.				
Analyses of the following variable, DRIVALC, should be executed with caution. The UNKNOWN category contains respondents coded as UNKNOWN on one or both of two source variables (DRVALDR, DRVAONLY). Depending on the purpose of the analysis, respondents coded as UNKNOWN might be more appropriately recoded as NO.				
DRIVALC	1	DROVE VEHICLE WHILE UNDER INFLUENCE OF ALCOHOL		
		1 = Yes (DRVALDR=1 OR DRVAONLY=1).....	6821	11.62
		2 = No (DRVALDR=2 AND DRVAONLY=2).....	5526	9.42
		3 = Unknown (OTHERWISE).....	22092	37.65
		4 = Never/No Use (DRVALDR AND DRVAONLY=81,89,91,99)...	24241	41.31
Analyses of the following variable, DRIVDRG, should be executed with caution. The UNKNOWN category contains respondents coded as UNKNOWN on one or both of two source variables (DRVALDR, DRVDONLY). Depending on the purpose of the analysis, respondents coded as UNKNOWN might be more appropriately recoded as NO.				
DRIVDRG	1	DROVE VEHICLE UNDER INFLUENCE OF ILLICIT DRUGS		
		1 = Yes (DRVALDR=1 OR DRVDONLY=1).....	2984	5.09
		2 = No (DRVALDR=2 AND DRVDONLY=2).....	6001	10.23
		3 = Unknown (OTHERWISE).....	2135	3.64
		4 = Never/No Use (DRVALDR AND DRVDONLY=81,89,91,99)...	47560	81.05
Analyses of the following variable, DRIVALD, should be executed with caution. The UNKNOWN category contains respondents coded as UNKNOWN on one or both of two source variables (DRIVALC, DRIVDRG). Depending on the purpose of the analysis, respondents coded as UNKNOWN might be more appropriately recoded as NO.				
DRIVALD	1	DROVE VEHICLE UNDER INFLUENCE OF ALC OR ILL DRUGS		
		1 = Yes (DRIVALC=1 OR DRIVDRG=1).....	7459	12.71
		2 = No (DRIVALC=2 AND DRIVDRG=2).....	4972	8.47

(TX01)		DRUG TREATMENT		
		-----		
		NOTE: Respondents were not asked questions in the DRUG TREATMENT module if they did not report lifetime use of alcohol, marijuana, cocaine, heroin, hallucinogens, or inhalants, or lifetime use of prescription-type psychotherapeutics (pain relievers, tranquilizers, stimulants, or sedatives) for nonmedical reasons. Codes of 81 or 91 in the edited DRUG TREATMENT variables indicate that the questions did not apply because respondents were nonusers of all of these substances.		
		These next questions deal with treatment for alcohol and drug problems, not including cigarettes. Please report treatment or counseling designed to help you reduce or stop your alcohol or drug use. Please include detoxification and any other treatment for medical problems associated with your alcohol or drug use.		
		Have you ever received treatment or counseling for your use of alcohol or any drug, not counting cigarettes?

(ADMT13)		The list below includes some of the places where people can get outpatient treatment or counseling for problems with their emotions, nerves, or mental health.		
		During the past 12 months, did you receive any outpatient treatment or counseling for any problem you were having with your emotions, nerves, or mental health at any of the places listed below? Please do not include treatment for alcohol or drug use.		
		- An outpatient mental health clinic or center		
		- The office of a private therapist, psychologist, psychiatrist, social worker, or counselor that was not part of a clinic		
		- A doctor's office that was not part of a clinic		
		- An outpatient medical clinic		
		- A partial day hospital or day treatment program		
		- Some other place

-----	----	-----	----	-
<p>The following variable, YOUTHACT, was created by counting the number of positive responses reported over the following ten activities: Youth center activities (YEYMCA), scouts (YESCOUTS), private lessons (YEPRVLES), team sports (YETEMSPT), 4-H club (YE4HCLUB), volunteer work (YEVOLUNT), church choir (YECHOIR), school clubs (YESCHCLB), band (YEBAND) or student government (YESTGOVT). Youth respondents who reported participation in 2 or more activities were included in the 2 or more category regardless of how many other questions were answered. Youth respondents who did not answer 5 or more of the 10 questions with a "yes" or "no" response were set to SAS missing and excluded from the analysis. To be included in the zero or one activity category, a youth respondent must have answered 5 or more of the questions and said they participated in either zero or one activity.</p>

<p>Please note that the intention of the CAI specifications for these 3 variables (DGSPCLS2, DGRGCLS2, &amp; DRGLECT2) was to ask these questions to only those respondents who reported being enrolled in school during the past year (YEENRLYR=1). Due to a skip logic problem, these questions were asked of those respondents who reported being enrolled in school or who did not answer the enrollment question (YEENRLYR=94 or 97). These variables were created based on the actual responses regardless of the respondents enrollment status.</p>

These next questions are about feelings that people  
sometimes have and things that may have happened to you  
during the past 12 months, that is since DATEFILL. Some  
of the questions mention your "parents." Remember that by  
parents, we mean either your biological parents, adoptive  
parents, stepparents, or adult guardians -- whether or not  
they live with you.

During the past 12 months, have you often felt very nervous  
or uncomfortable when you have been with a group of children  
or young people -- say, like in the lunchroom at school or  
at a party?

		This question is about sudden attacks of feeling very afraid. In this kind of attack, someone becomes very afraid even though there is nothing around them to frighten them. Sometimes they feel they can't breathe and sometimes their heart beats very fast. The attacks come on very suddenly and then go away, but they get afraid that the attacks might come back.		
		During the past 12 months, that is since DATEFILL, have you had an attack when all of a sudden you felt very afraid or strange?

		INCOME AND INSURANCE		
		-----		
		NOTE: The variables which immediately follow refer to questions about the kinds and amounts of income received. Only imputed variables are included since other variables do not provide any additional analytic utility. Users can differentiate between imputed and non-imputed values using the imputation indicators. Questions about income from the questionnaire are not reproduced since the variables below do not correspond exactly to those questions. Edited and imputed health insurance variables, with the accompanying questionnaire questions, follow the income variables.

NOTE: The following variable, GOVTPROG, was created from one or more of the preceding variables from this same section.				
The following variable, GOVTPROG, was created by examination of these government assistance program variables: Supplemental Security Income (IRFAMSSI), food stamps (IRFSTAMP), cash assistance (IRFAMPMT), and non-cash assistance (IRFAMSVCS).				
GOVTPROG	1	PARTICIPATED IN ONE OR MORE GOVT ASSIST PROGRAMS		
		1 = YES (ANY SOURCE VARIABLE=1).....	7942	13.53
		2 = NO (ALL SOURCE VARIABLES=2).....	50738	86.47
NOTE: The variable HLCALLFG is a created "flag" variable that indicates when a respondent (or proxy) answered yes to MEDICARE, MEDICAID, CHAMPUS, OGOVTINS, PRVHLTIN, and OTHLTINS (see below), indicating that the respondent was currently covered by all of these forms of health insurance. The variable HLCALL99 also is a created "flag" variable that indicates when respondents answered yes to MEDICARE, MEDICAID, CHAMPUS, and PRVHLTIN. This HLCALL99 variable is comparable to HLCALLFG in 1999, when these four types of health insurance were the only types of current coverage that were asked about in the interview.

(QHI15)		NOTE: In the variable HLCLAST, codes of 11 through 15 were assigned when there was some inconsistency between the answer to HLCLAST and data on the type of coverage the respondent last had, why the respondent lost coverage, or why the respondent never had coverage. Codes of 11 through 14 indicate that the respondent (or proxy) reported not being currently covered by any of the forms of health insurance asked about in the interview but (a) the response to the question about the type of last health insurance coverage indicated that the respondent never had health insurance, or (b) the reason specified for losing health insurance indicated that the respondent currently or never had health insurance. Similarly, a code of 15 was assigned to HLCLAST if the respondent (or proxy) reported never having health insurance but subsequently indicated current or former health insurance coverage.

(AGE1)

NOTE: After a respondent has entered his/her birthdate in the first part of the questionnaire, he/she has multiple opportunities to change his/her age in response to consistency checks throughout the questionnaire. It is therefore possible for the age recorded by the respondent at the beginning of the questionnaire to be different than the age at the end of the questionnaire. The final age variable is determined using these two constituent age variables, in addition to the age calculated from the raw birthdate and the final edited interview date, the age entered in the questionnaire roster (if it exists), and the pre-interview screener age.

<p>The following variable, EMPSTATY, was created to promote consistency across survey years. The similar variable EMPSTAT3 was created in 1999 and 2000; it could not be created in the survey years since 2001 because of changes to the questionnaire. (See the comment before JBSTATR2 for more details.) EMPSTATY differs from EMPSTAT3 in three ways. First, its levels were derived without regard to the other-specify answers to QD30 and QD31 in the 1999 and 2000 questionnaires. Second, its levels were mapped so that they were closer to the definition of "unemployed" in the Current Population Survey. Third, it has meaningful values for 15-17 year old respondents instead of a skip code. The main difference in the definition of "unemployed" between EMPSTATY and the CPS is that EMPSTATY considers people who did not have a job last week and were not looking for a job all to be unemployed. In comparison, the CPS definition requires people who did not have a job last week and were not looking for a job to be waiting to be recalled to their old job, in order for them to be classified as unemployed.</p>

NOTE: The school enrollment variable ENROLED was assigned codes of 11 or 52 if the respondent reported currently being enrolled (in the case of the code of 11) or not being enrolled (in the case of the code of 52) but there was uncertainty about the respondent's school enrollment status.

The next questions are about school. Are you now attending or are you currently enrolled in school? By "school," we mean an elementary school, a junior high or middle school, a high school, or a college or university. Please include home schooling as well.

NOTE: The variable JBSTATR2 was created from questions that asked respondents whether they worked in the past week, whether they usually work 35 or more hours per week, and where relevant, reasons why they did not work in the past week. "Other" reasons specified for not working or not having a job generally were not taken into account in creating JBSTATR2. Respondents who did not know or refused to report whether they worked in the past week but indicated that they did not work in the past 12 months were classified in JBSTATR2 as not having a job. In addition, respondents who reported that they had no job but were looking for work were not classified as being in the labor force unless they reported making specific efforts to find work. In the variable JOBSTAT2, these respondents were classified as being unemployed/on layoff and looking for work. Other than these changes, the variable JBSTATR2 is analogous to the variable JOBSTAT2.

## **APPENDIX A**

### **Drug Codes for Open-Ended Questions**

## APPENDIX A

### Drug Codes for Open-Ended Questions (2000 CAI NHSDA)

#### Numerical Listing

NOTE: Due to changes in the NHSDA instrument in 1999,  
codes for some drugs may differ from those used in prior survey years.

101 = Butisol	156 = Sodium barbital
102 = Buticaps	157 = Barbiturates
103 = Amytal	159 = Octanox
104 = Mebaral	163 = Blue meanies
105 = Placidyl	164 = Yellow zombies
106 = Doriden	171 = NyQuil <OTC>
107 = Noludar	172 = Dream Ease <OTC>
108 = Nembutal	173 = Wafers
109 = Seconal	174 = Ambien, Zolpidem
110 = Tuinal	176 = Melatonin <OTC>
111 = Dalmane, Flurazepam	177 = Bean
112 = Restoril, Temazepam	178 = Quetiapine, Seroquel
113 = Halcion	179 = Water tee [sic]
114 = Amobarbital	180 = Tylenol P.M. <OTC>
115 = Phenobarbital	181 = Excedrin P.M. <OTC>
116 = Methaqualone, Quaalude, Sopor	182 = Melzone
117 = Chloral hydrate, Noctec	183 = Mysoline
118 = Pentobarbital, Pentothal, Sodium pentothal	184 = Red and blues
119 = Secobarbital	185 = Tylenol Simply Sleep <OTC>
120 = Downers; OTHER Sedative, NOT OTHERWISE SPECIFIED	186 = Butalbital

## **APPENDIX C**

### **Tobacco Brand Codes for Open-Ended Questions**

The final tobacco brand codes were created from listings of brands that appeared on the computer screen(s) corresponding to that particular type of tobacco, or from answers that respondents specified, if they indicated use of "a brand not on this list." For each tobacco product (cigarettes, chewing tobacco, snuff, and cigars), the available responses in the contiguous order of appearance on the screen were used to initially create each tobacco product group. Tobacco brand codes 100-199 and 1000-1999 represent cigarette brands, codes 200-299 and 2000-2999 represent chewing tobacco brands, codes 300-399 and 3000-3999 represent snuff brands, and codes 400-499 and 4000-4999 represent cigar brands. Additional codes were added to each group list as needed. Miscellaneous tobacco and non-tobacco groups are represented by the 500-599, 600-699, 700-799, and 800-899 series.

For tobacco brands that respondents could choose from a list, no distinction was made in the coding between situations where respondents chose that particular brand from the list, and those where respondents reported use of "a brand not on this list" and then specified use of that brand. In addition, there was no distinction between particulars such as menthol, light, or full-flavor varieties in the coding. In addition, the coding took into account situations where respondents might specify a brand that corresponded to a different type of tobacco. For example, if a snuff brand was specified as a brand of "chewing tobacco," then the reported brand of "chewing tobacco" was assigned a code in the 300 series, corresponding to snuff.

## APPENDIX C

### Tobacco Brand Codes for Open-Ended Questions (2000 CAI NHSDA)

#### Numerical Listing

##### Cigarette Brands

101 = Basic	149 = Pyramid
102 = Benson & Hedges	150 = Raleigh

## **APPENDIX D**

### **Substance Dependence and Abuse Variable Documentation**

The 2000 NHSDA CAI included a series of questions designed to assess substance dependence and abuse, based on the criteria for dependence and abuse in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). In order to identify patterns of substance abuse within the 2000 NHSDA data, variable indicators were created to measure dependence on and abuse of alcohol and/or drugs. Due to the complexity of defining these dependence and abuse variables, additional details about how each of these indicators were created is being included in this appendix. For marijuana, inhalants, hallucinogens, and tranquilizers, a respondent was defined as having dependence if they met 3 or more of 6 dependence criteria. For alcohol, pain relievers, cigarettes, cocaine, heroin, sedatives, and stimulants, a respondent was defined as having dependence if they met 3 or more of 7 dependence criteria (including six standard criteria plus a seventh withdrawal symptom criteria). For alcohol and each illicit drug, a respondent was defined as having abused that substance if they met 1 or more of 4 abuse criteria.

Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the dependence and abuse questions, users should be aware of the possible inconsistencies that may exist between the dependence and abuse variables and the imputed substance use and frequency of use variables for selected substances. The general reasons for inconsistencies and general types of inconsistencies are discussed in the following paragraphs.

Responses from core substance use and frequency of substance use questions as well as non-core substance use questions were used as criteria to determine whether or not a respondent was asked the dependence and abuse questions. Unknown responses in the core substance use and frequency of substance use questions are imputed. However, the imputation process does not take into account reported data in the non-core CAI modules. Responses could exist to the dependence and abuse questions that are inconsistent with the imputed substance use or frequency of use. These inconsistent responses could remain in the edited dependence and abuse variables and have not been excluded in the creation of the dependence and abuse recodes. Since different criteria and different combinations of criteria were used as skip logic for each substance, different types of inconsistencies between the dependence and abuse variables and the imputed substance use and frequency of substance use variables may occur.

For the substances alcohol and marijuana, the criteria used to determine whether or not a respondent was asked the dependence and abuse questions included past year use of the respective substance and reporting use of the respective substance on 6 or more days in the past year. Since respondents were asked the dependence and abuse questions if they reported substance use in the past year, but did not report their frequency of substance use in the past year, inconsistencies can occur where the imputed frequency of use variable indicates less frequent use than required for respondents to be asked the dependence and abuse questions originally. For the substances stimulants, heroin, and cocaine, the criteria included reporting past year use in a core drug module or past year use in the non-core Special Drugs module; inconsistencies can occur when a core substance use variable indicates no use in the past year, but a dependence and abuse variable indicates substance dependence or abuse. For the substances hallucinogens, pain relievers, tranquilizers, inhalants, sedatives, and cigarettes, the only criteria used was that the respondent reported past year use of the respective substance, thus no inconsistencies can occur where the respondent is considered a non-user of the substance, but dependent on or abusing the substance. A respondent might provide ambiguous information about their past year use of any individual substance, in which case these respondents are not asked the dependence and abuse questions for that substance. Subsequently, these respondents can be imputed to be past year users of the

respective substance. In this situation, the dependence and abuse data are unknown, thus these respondents are classified as not dependent on or abusing the respective substance; however, the respondent was never actually asked the dependence and abuse questions.

Listed below are the definitions used for each of the individual dependence and abuse measures, as well as specific notes about inconsistency issues that exist for each measure. Additional variables were created using a combination of these individual dependence and abuse measures and are listed in the main part of the codebook.

### **Substance Dependence Recodes Defined with Withdrawal Criteria**

#### **ALCOHOL:**

To be defined with alcohol dependence, DEPNDALC, a respondent must have met 3 or more of these alcohol dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of alcohol (ALCLOTTM=1 or ALCGTOVR=1)
- (2) Used alcohol more often than intended or was unable to keep set limits on alcohol use (ALCKPLMT=2)
- (3) Needed to use alcohol more than before to get desired effects or noticed that same amount of alcohol use had less effect than before (ALCNDMOR=1 or ALCLSEFX=1)
- (4) Inability to cut down or stop using alcohol every time tried or wanted to (ALCCUTEV=2)
- (5) Continued to use alcohol even though it was causing problems with emotions, nerves, mental health, or physical problems (ALCEMCTD=1 or ALCPHCTD=1)
- (6) Alcohol use reduced or eliminated involvement or participation in important activities (ALCLSACT=1)
- (7) Reported experiencing 2 or more alcohol withdrawal symptoms at the same time that lasted longer than a day after alcohol use was cut back or stopped. Symptoms include: i) sweating or feeling that heart was beating fast, ii) having hands tremble, iii) having trouble sleeping, iv) vomiting or feeling nauseous, v) seeing, hearing, or feeling things that weren't really there, vi) feeling like couldn't sit still, vii) feeling anxious, viii) having seizures or fits. (ALCWDSMT=1)

Note: A respondent could answer the dependence questions if they reported using alcohol in the past year, but did not report the frequency of days in which they drank an alcoholic beverage. Thus cases may exist where a respondent was classified as dependent on alcohol, but drank an alcoholic beverage less than six days in the past year according to the imputed frequency of use variable (IRALCFY).

**CIGARETTES:**

To be defined with cigarette dependence, DEPND CIG, a respondent must have met 3 or more of these cigarette dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of cigarettes (CIGLOTTM=1)
- (2) Used cigarettes more often than intended or was unable to keep set limits on cigarette use (CIGKPLMT=2)
- (3) Needed to use cigarettes more than before to get desired effects or noticed that same amount of cigarette use had less effect than before (CIGNDMOR=1 or CIGLSEFX=1)
- (4) Inability to cut down or stop using cigarettes every time tried or wanted to (CIGCUTEV=2)
- (5) Continued to use cigarettes even though it was causing problems with emotions, nerves, mental health, or physical problems (CIGEMCTD=1 or CIGPHCTD=1)
- (6) Cigarette use reduced or eliminated involvement or participation in important activities (CIGLSACT=1)
- (7) Reported experiencing 4 or more cigarette withdrawal symptoms at the same time that lasted longer than a day after cigarette use was cut back or stopped. Symptoms include: i) feeling kind of blue, down, or depressed, ii) having trouble sleeping, iii) feeling irritable, frustrated, or angry, iv) feeling anxious, v) having difficulty concentrating, vi) feeling hungry more often or gaining weight, vii) feeling restless, viii) having slower heart rate. (CIGWDSMT=1)

**COCAINE:**

To be defined with cocaine dependence, DEPND COC, a respondent must have met 3 or more of these cocaine dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of cocaine (COCLOTTM=1 or COCGTOVR=1)
- (2) Used cocaine more often than intended or was unable to keep set limits on alcohol use (COCKPLMT=2)
- (3) Needed to use cocaine more than before to get desired effects or noticed that same amount of cocaine use had less effect than before (COCNDMOR=1 or COCLSEFX=1)
- (4) Inability to cut down or stop using cocaine every time tried or wanted to (COCCUTEV=2)
- (5) Continued to use cocaine even though it was causing problems with emotions, nerves, mental health, or physical problems (COCEMCTD=1 or COCPHCTD=1)
- (6) Cocaine use reduced or eliminated involvement or participation in important activities (COCLSACT=1)
- (7) Reported feeling blue or down when trying to stop or cut down using cocaine (COCFLBLU=1) as well as experiencing 2 or more additional cocaine withdrawal symptoms at the same time that lasted longer than a day after cocaine use was cut back or stopped. Symptoms include: i) feeling tired or exhausted, ii) having bad dreams, iii) having trouble sleeping or sleeping more than normal, iv) feeling hungry more often, v) feeling either very slowed down or like could not sit still. (COCWDSMT=1)

Note: A respondent could answer the dependence questions if they reported injecting cocaine with a needle in the past year, even though they reported not using cocaine in the past year. Thus cases may exist where a respondent was classified as being dependent on cocaine, even though they had not used cocaine in the past year according to the imputed recency variable (COCYR).

**HEROIN:**

To be defined with heroin dependence, DEPNDHER, a respondent must have met 3 or more of these heroin dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of heroin (HERLOTTM=1 or HERGTOVR=1)
- (2) Used heroin more often than intended or was unable to keep set limits on heroin use (HERKPLMT=2)
- (3) Needed to use heroin more than before to get desired effects or noticed that same amount of heroin use had less effect than before (HERNDMOR=1 or HERLSEFX=1)
- (4) Inability to cut down or stop using heroin every time tried or wanted to (HERCUTEV=2)
- (5) Continued to use heroin even though it was causing problems with emotions, nerves, mental health, or physical problems (HEREMCTD=1 or HERPHCTD=1)
- (6) Heroin use reduced or eliminated involvement or participation in important activities (HERLSACT=1)
- (7) Reported experiencing 3 or more heroin withdrawal symptoms at the same time that lasted longer than a day after heroin use was cut back or stopped. Symptoms include: i) feeling kind of blue or down, ii) vomiting or feeling nauseous, iii) having cramps or muscle aches, iv) having teary eyes or a runny nose, v) feeling sweaty, having enlarged eye pupils, or having body hair standing up on skin, vi) having diarrhea, vii) yawning, viii) having a fever, ix) having trouble sleeping. (HERWDSMT=1)

Note: A respondent could answer the dependence questions if they reported injecting with a needle, sniffing, or snorting heroin in the past year, even though they reported not using heroin in the past year. Thus cases may exist where a respondent was classified as dependent on heroin, even though they had not used heroin in the past year according to the imputed recency variable (HERYR).

**PAIN RELIEVERS:**

To be defined with pain reliever dependence, DEPNDANL, a respondent must have met 3 or more of these pain reliever dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of pain relievers (ANLLOTTM=1 or ANLGTOVR=1)
- (2) Used pain relievers more often than intended or was unable to keep set limits on pain reliever use (ANLKPLMT=2)
- (3) Needed to use pain relievers more than before to get desired effects or noticed that same amount of pain reliever use had less effect than before (ANLNDMOR=1 or ANLLSEFX=1)
- (4) Inability to cut down or stop using pain relievers every time tried or wanted to (ANLCUTEV=2)
- (5) Continued to use pain relievers even though it was causing problems with emotions, nerves, mental health, or physical problems (ANLEMCTD=1 or ANLPHCTD=1)
- (6) Pain reliever use reduced or eliminated involvement or participation in important activities (ANLLSACT=1)
- (7) Reported experiencing 3 or more pain reliever withdrawal symptoms at the same time that lasted longer than a day after pain reliever use was cut back or stopped. Symptoms include: i) feeling kind of blue or down, ii) vomiting or feeling nauseous, iii) having cramps or muscle aches, iv) having teary eyes or a runny nose, v) feeling sweaty, having enlarged pupils, or having body hair standing up on skin, vi) having diarrhea, vii) yawning, viii) having a fever, ix) having trouble sleeping. (ANLWDSMT=1)

**SEDATIVES:**

To be defined with sedative dependence, DEPNDSED, a respondent must have met 3 or more of these sedative dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of sedatives (SEDLTTM=1 or SEDGTOVR=1)
- (2) Used sedatives more often than intended or was unable to keep set limits on sedative use (SEDKPLMT=2)
- (3) Needed to use sedatives more than before to get desired effects or noticed that same amount of sedative use had less effect than before (SEDNDMOR=1 or SEDLSEFX=1)
- (4) Inability to cut down or stop using sedatives every time tried or wanted to (SEDCUTEV=2)
- (5) Continued to use sedatives even though it was causing problems with emotions, nerves, mental health, or physical problems (SEDEMCTD=1 or SEDPHCTD=1)
- (6) Sedative use reduced or eliminated involvement or participation in important activities (SEDLFACT=1)
- (7) Reported experiencing 2 or more sedative withdrawal symptoms at the same time that lasted longer than a day after sedative use was cut back or stopped. Symptoms include: i) sweating or feeling that heart was beating fast, ii) having hands tremble, iii) having trouble sleeping or sleeping more than normal, iv) vomiting or feeling nauseous, v) seeing, hearing, or feeling things that weren't really there, vi) feeling like couldn't sit still, vii) feeling anxious, viii) having seizures or fits. (SEDWDSMT=1)

**STIMULANTS:**

To be defined with stimulant dependence, DEPNDSTM, a respondent must have met 3 or more of these stimulant dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of stimulants (STMLOTTM=1 or STMGTOVR=1)
- (2) Used stimulants more often than intended or was unable to keep set limits on stimulant use (STMKPLMT=2)
- (3) Needed to use stimulants more than before to get desired effects or noticed that same amount of stimulant use had less effect than before (STMNDMOR=1 or STMSEFX=1)
- (4) Inability to cut down or stop using stimulants every time tried or wanted to (STMCUTEV=2)
- (5) Continued to use stimulants even though it was causing problems with emotions, nerves, mental health, or physical problems (STMEMCTD=1 or STMPHCTD=1)
- (6) Stimulant use reduced or eliminated involvement or participation in important activities (STMFACT=1)
- (7) Reported feeling blue or down when trying to stop or cut down using stimulants (STMFLBLU=1) as well as experiencing 2 or more additional stimulant withdrawal symptoms at the same time that lasted longer than a day after stimulant use was cut back or stopped. Symptoms include: i) feeling tired or exhausted, ii) having bad dreams, iii) having trouble sleeping or sleeping more than normal, iv) feeling hungry more often, v) feeling either very slowed down or like could not sit still. (STMWDSMT=1)

Note: A respondent could answer the dependence questions if they reported injecting stimulants with a needle in the past year, even though they reported not using stimulants in the past year. Thus cases may exist where a respondent was classified as being dependent on stimulants, even though they had not used stimulants in the past year according to the imputed recency variable (STMYSR).

## **Substance Dependence Recodes Defined Without Withdrawal Criteria**

### **HALLUCINOGENS:**

To be defined with hallucinogen dependence, DEPNDHAL, a respondent must have met 3 or more of these hallucinogen dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of hallucinogens (HALLOTTM=1 or HALGTOVR=1)
- (2) Used hallucinogens more often than intended or was unable to keep set limits on hallucinogen use (HALKPLMT=2)
- (3) Needed to use hallucinogens more than before to get desired effects or noticed that same amount of hallucinogen use had less effect than before (HALNDMOR=1 or HALLSEFX=1)
- (4) Inability to cut down or stop using hallucinogens every time tried or wanted to (HALCUTEV=2)
- (5) Continued to use hallucinogens even though they was causing problems with emotions, nerves, mental health, or physical problems (HALEMCTD=1 or HALPHCTD=1)
- (6) Hallucinogen use reduced or eliminated involvement or participation in important activities (HALLSACT=1)

### **INHALANTS:**

To be defined with inhalant dependence, DEPNDINH, a respondent must have met 3 or more of these inhalant dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of inhalants (INHLOTTM=1 or INHGTOVR=1)
- (2) Used inhalants more often than intended or was unable to keep set limits on inhalant use (INHKPLMT=2)
- (3) Needed to use inhalants more than before to get desired effects or noticed that same amount of inhalant use had less effect than before (INHNDMOR=1 or INHLSEFX=1)
- (4) Inability to cut down or stop using inhalants every time tried or wanted to (INHCUTEV=2)
- (5) Continued to use inhalants even though they was causing problems with emotions, nerves, mental health, or physical problems (INHEMCTD=1 or INHPHCTD=1)
- (6) Inhalant use reduced or eliminated involvement or participation in important activities (INHLSACT=1)

**MARIJUANA:**

To be defined with marijuana dependence, DEPNDMRJ, a respondent must have met 3 or more of these marijuana dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of marijuana (MRJLOTTM=1 or MRJGTOVR=1)
- (2) Used marijuana more often than intended or was unable to keep set limits on marijuana use (MRJKPLMT=2)
- (3) Needed to use marijuana more than before to get desired effects or noticed that same amount of marijuana use had less effect than before (MRJNDMOR=1 or MRJLSEFX=1)
- (4) Inability to cut down or stop using marijuana every time tried or wanted to (MRJCUTEV=2)
- (5) Continued to use marijuana even though they was causing problems with emotions, nerves, mental health, or physical problems (MRJEMCTD=1 or MRJPHCTD=1)
- (6) Marijuana use reduced or eliminated involvement or participation in important activities (MRJLSACT=1)

Note: A respondent could answer the dependence questions if they reported using marijuana in the past year, but did not report the frequency of days in which they used marijuana. Thus cases may exist where a respondent was classified as dependent on marijuana, but used marijuana less than six days in the past year according to the imputed frequency of use variable (IRMRJFY).

**TRANQUILIZERS:**

To be defined with tranquilizer dependence, DEPNDTRN, a respondent must have met 3 or more of these tranquilizer dependence criteria:

- (1) Spent a great deal of time over a period of a month getting, using, or getting over the effects of tranquilizers (TRNLOTTM=1 or TRNGTOVR=1)
- (2) Used tranquilizers more often than intended or was unable to keep set limits on tranquilizer use (TRNKPLMT=2)
- (3) Needed to use tranquilizers more than before to get desired effects or noticed that same amount of tranquilizer use had less effect than before (TRNNDMOR=1 or TRNLSEFX=1)
- (4) Inability to cut down or stop using tranquilizers every time tried or wanted to (TRNCUTEV=2)
- (5) Continued to use tranquilizers even though they was causing problems with emotions, nerves, mental health, or physical problems (TRNEMCTD=1 or TRNPHCTD=1)
- (6) Tranquilizer use reduced or eliminated involvement or participation in important activities (TRNLSACT=1)

## **Substance Abuse Recodes**

### **ALCOHOL:**

To be defined with abuse of alcohol, ABUSEALC, a respondent must have met 1 or more of these alcohol abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using alcohol - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(ALCSERP=1)
- (2) Used alcohol regularly and then did something that might have put you in physical danger (ALCPDANG=1)
- (3) Use of alcohol caused you to do things that repeatedly got you in trouble with the law (ALCLAWTR=1)
- (4) Problems with family or friends that were probably caused by using alcohol (ALCFMFPB=1) and continued to use alcohol even though you thought using alcohol caused these problems (ALCFMCTD=1)

Note: A respondent could answer the abuse questions if they reported using alcohol in the past year, but did not report the frequency of days in which they drank an alcoholic beverage. Thus cases may exist where a respondent was classified to have abused alcohol, but drank an alcoholic beverage less than six days in the past year according to the imputed frequency of use variable (IRALCFY).

### **COCAINE:**

To be defined with abuse of cocaine, ABUSECOC, a respondent must have met 1 or more of these cocaine abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using cocaine - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(COCSERP=1)
- (2) Used cocaine regularly and then did something that might have put you in physical danger (COCPDANG=1)
- (3) Use of cocaine caused you to do things that repeatedly got you in trouble with the law (COCLAWTR=1)
- (4) Problems with family or friends probably caused by using cocaine (COCFMFPB=1) and continued to use cocaine even though you thought using cocaine caused these problems (COCFMCTD=1)

Note: A respondent could answer the abuse questions if they reported injecting cocaine with a needle in the past year, even though they reported not using cocaine in the past year. Thus cases may exist where a respondent was classified to have abused cocaine, even though they had not used cocaine in the past year according to the imputed recency variable (COCYR).

**HALLUCINOGENS:**

To be defined with abuse of hallucinogens, ABUSEHAL, a respondent must have met 1 or more of these hallucinogen abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using hallucinogens - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(HALSERPB=1)
- (2) Used hallucinogens regularly and then did something that might have put you in physical danger (HALPDANG=1)
- (3) Use of hallucinogens caused you to do things that repeatedly got you in trouble with the law (HALLAWTR=1)
- (4) Problems with family or friends caused by using hallucinogens (HALFMFPB=1) and continued to use hallucinogens even though you thought using hallucinogens caused these problems (HALFMCTD=1)

**HEROIN:**

To be defined with abuse of heroin, ABUSEHER, a respondent must have met 1 or more of these heroin abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using heroin - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(HERSERPB=1)
- (2) Used heroin regularly and then did something that might have put you in physical danger (HERPDANG=1)
- (3) Use of heroin caused you to do things that repeatedly got you in trouble with the law (HERLAWTR=1)
- (4) Problems with family or friends probably caused by using heroin (HERFMFPB=1) and continued to use heroin even though you thought using heroin caused these problems (HERFMCTD=1)

Note: A respondent could answer the abuse questions if they reported injecting with a needle, sniffing, or snorting heroin in the past year, even though they reported not using heroin in the past year. Thus cases may exist where a respondent was classified to have abused heroin, even though they had not used heroin in the past year according to the imputed recency variable (HERYR).

**INHALANTS:**

To be defined with abuse of inhalants, ABUSEINH, a respondent must have met 1 or more of these inhalant abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using inhalants - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(INHSERPB=1)
- (2) Used inhalants regularly and then did something that might have put you in physical danger (INHPDANG=1)
- (3) Use of inhalants caused you to do things that repeatedly got you in trouble with the law (INHLOWTR=1)
- (4) Problems with family or friends caused by using inhalants (INHFMFPB=1) and continued to use inhalants even though you thought using inhalants caused these problems (INHFMCTD=1)

**MARIJUANA:**

To be defined with abuse of marijuana, ABUSEMRJ, a respondent must have met 1 or more of these marijuana abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using marijuana - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(MRJSERPB=1)
- (2) Used marijuana regularly and then did something that might have put you in physical danger (MRJPDANG=1)
- (3) Use of marijuana caused you to do things that repeatedly got you in trouble with the law (MRJLOWTR=1)
- (4) Problems with family or friends caused by using marijuana (MRJFMFPB=1) and continued to use marijuana even though you thought using marijuana caused these problems (MRJFMCTD=1)

Note: A respondent could answer the abuse questions if they reported using marijuana in the past year, but did not report the frequency of days in which they used marijuana. Thus cases may exist where a respondent was classified to have abused marijuana, but used marijuana less than six days in the past year according to the imputed frequency of use variable (IRMRJFY).

**PAIN RELIEVERS:**

To be defined with abuse of pain relievers, ABUSEANL, a respondent must have met 1 or more of these pain reliever abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using pain relievers - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(ANLSERP=1)
- (2) Used pain relievers regularly and then did something that might have put you in physical danger (ANLPDANG=1)
- (3) Use of pain relievers caused you to do things that repeatedly got you in trouble with the law (ANLLAWTR=1)
- (4) Problems with family or friends probably caused by using pain relievers (ANLFMFPB=1) and continued to use pain relievers even though you thought using pain relievers caused these problems (ANLFMCTD=1)

**SEDATIVES:**

To be defined with abuse of sedatives, ABUSESED, a respondent must have met 1 or more of these sedative abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using sedatives - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(SEDSERP=1)
- (2) Used sedatives regularly and then did something that might have put you in physical danger (SEDPDANG=1)
- (3) Use of sedatives caused you to do things that repeatedly got you in trouble with the law (SEDLAWTR=1)
- (4) Problems with family or friends probably caused by using sedatives (SEDFMFPB=1) and continued to use sedatives even though you thought using sedatives caused these problems (SEDFMCTD=1)

**STIMULANTS:**

To be defined with abuse of stimulants, ABUSESTM, a respondent must have met 1 or more of these stimulant abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using stimulants - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(STMSERP=1)
- (2) Used stimulants regularly and then did something that might have put you in physical danger (STMPDANG=1)
- (3) Use of stimulants caused you to do things that repeatedly got you in trouble with the law (STMLAWTR=1)
- (4) Problems with family or friends probably caused by using stimulants (STMFMFPB=1) and continued to use stimulants even though you thought that using stimulants caused these problems (STMFMCTD=1)

Note: A respondent could answer the abuse questions if they reported injecting stimulants with a needle in the past year, even though they reported not using stimulants in the past year. Thus cases may exist where a respondent was classified to have abused stimulants, even though they had not used stimulants in the past year according to the imputed recency variable (STMYP).

**TRANQUILIZERS:**

To be defined with abuse of tranquilizers, ABUSETRN, a respondent must have met 1 or more of these tranquilizer abuse criteria in the past year:

- (1) Serious problems at home, work, or school caused by using tranquilizers - such as:
  - neglecting their children
  - missing work or school
  - doing a poor job at work or school
  - losing a job or dropping out of school(TRNSERP=1)
- (2) Used tranquilizers regularly and then did something that might have put you in physical danger (TRNPDANG=1)
- (3) Use of tranquilizers caused you to do things that repeatedly got you in trouble with the law (TRNLAWTR=1)
- (4) Problems with family or friends caused by using tranquilizers (TRNFMFPB=1) and continued to use tranquilizers even though you thought using tranquilizers caused these problems (TRNFMCTD=1)

## MANAGERIAL AND PROFESSIONAL SPECIALTY OCCUPATIONS

1

### Executive, Administrative, and Managerial Occupations

Legislators (111)

Chief executives and general administrators,  
public administration (112)

Administrators and officials, public  
administration (1132-1139)

Administrators, protective services (1131)

Financial managers (122)

Personnel and labor relations managers (123)

Purchasing managers (124)

Managers, marketing, advertising, and public  
relations (125)

Administrators, education and related fields  
(128)

Managers, medicine and health (131)

Postmasters and mail superintendents (1344)

Managers, food serving and lodging  
establishments (1351)

Managers, properties and real estate (1353)

Funeral directors (pt 1359)

Managers, service organizations, n.e.c. (127,  
1352, 1354, pt 1359)

Managers and administrators, n.e.c. (121, 126,  
132-1343, 136-139)

#### Management Related Occupations

Accountants and auditors (1412)

Underwriters (1414)

Other financial officers (1415, 1419)

Management analysts (142)

Personnel, training, and labor relations  
specialists (143)

Purchasing agents and buyers, farm  
products (1443)

Buyers, wholesale and retail trade except  
farm products (1442)

Purchasing agents and buyers, n.e.c. (1449)

Business and promotion agents (145)

Construction inspectors (1472)

Inspectors and compliance officers, except  
construction (1473)

Management related occupations, n.e.c. (149)

	Colleges and universities (822)		Armed Forces, Branch not specified
	Vocational schools (824)		Military Reserves or National Guard
	Libraries (823)		
	Educational services, n.e.c. (829)		<b>EXPERIENCED UNEMPLOYED NOT CLASSIFIED BY INDUSTRY</b>
		<b>992</b>	Last worked 1984 or earlier

## **APPENDIX G**

### **Variable Map**

The Variable Map marks the progression of data from the initial CAI Specification stage through the Edited, Imputation, and Recode stages. There are columns for the variable names at each of these stages. Analysts may use this map to determine what data are used in the creation of variables at a later stage.

CAI variables are those found in the specifications. The specifications include the logic flow and how the respondent reaches each of the questions. The electronic version of the CAI Specifications may be found at <http://datafiles.samhsa.gov>.

Edited variables use mnemonic names to describe the content of the variables and may contain special codes to indicate that logical assignment of values has taken place.

Variables under the column "imputed" are equivalent to their edited counterparts, except that missing or ambiguous values have been replaced by valid response codes obtained using an appropriate imputation procedure. Imputed values are distinguished from nonimputed values by an accompanying indicator variable, identified by the prefix "II" and given in the "Other" column.

Recoded variables are produced for the purpose of creating the estimates found in the Summary Tables and the annual Summary of Findings Report. In general, these use mnemonic names to describe the content of the variables. Data file users are advised to use these recoded variables to produce estimates comparable to those in published reports.

Variables that do not necessarily fall into the above categories are listed in the "Other" column.

The notes on the following page are referenced throughout the map. The column titled Notes will contain numbers 1 through 10 if the analyst should refer to the notes.

**NOTE 1: This variable was created from recoded versions of the indicated source data. See the codebook for further information.**

**NOTE 2: This recoded variable was also created using the source data from the recoded "Ill Drug Dependency - Last 12 Months" variable labeled DEPNDILL.**

**NOTE 3: This recoded variable was also created using the source data from the recoded "Last/Current Trt for Ill Drugs" variable labeled TXLTILL2.**

**NOTE 4: This recoded variable was also created using the source data from the recoded "Ill Drug Abuse - Last 12 Months" variable labeled ABUSEILL.**

**NOTE 5: This recoded variable was also created using the source data from the recoded "Ill Drug Abuse - Last 12 Months" variable labeled ABUSEILL and the recoded "Ill Drug Dependence - Last 12 Months" variable labeled DEPNDILL.**

**NOTE 6: This recoded variable was also created using the source data from the recoded "Any Psych Abuse - Last 12 Months" variable labeled ABUSEPSY and the recoded "Any Psych Dependence - Last 12 Months" variable labeled DEPNDPSY.**

**NOTE 7: This recoded variable was also created using the source data from the recoded "Ill Drug Other Than MRJ Dep- Last 12 Months" variable labeled DEPNDIEM.**

**NOTE 8: This recoded variable was also created using the source data from the recoded "Ill Drug Other Than MRJ Abuse- Last 12 Months" variable labeled ABUSEIEM.**

**NOTE 9: This recoded variable was also created using the source data from the recoded "Ill Drug and Alc Dep- Last 12 Months" variable labeled DPILANAL and the recoded "Ill Drug and Alc Abuse- Last 12 Months" variable labeled ABILANAL.**

**NOTE 10: This recoded variable was also created using the source data from the recoded "Ill Drug or Alc Dep- Last 12 Months" variable labeled DPILLALC and the recoded "Ill Drug or Alc Abuse- Last 12 Months" variable labeled ABILLALC.**
