IDENTIFICATION

IDENTIFICATION

The following variable, QUESTID2, is a unique record identifier within a particular study year. The IDs may be repeated in other study years, so analysts should always consider the study year when using the QUESTID2. It should be noted that this variable was referred to as QUESTID in prior years.

QUESTID2 Len : 7 RESPONDENT IDENTIFICATION

The following variable, FILEDATE, represents the date the SAS data file was created.

FILEDATE Len : 10 CREATION DATE OF THE DATA FILE

YEAR Len : 4 YEAR IN WHICH DATA WAS COLLECTED

NOTE: Prior to 2004, the question corresponding to CIG30MEN asked whether respondents smoked menthol or regular cigarettes most often. In 2004, the question was changed to the yes/no question shown below, but the variable name stayed as CIG30MEN. This change in question content does not affect trend comparisons for 2004 onward. However, data in CIG30MEN for 2004 onward are not likely to be comparable with data in CIG30MEN for 2002 and 2003.

These next questions are about your use of snuff, sometimes called dip. Snuff is a finely ground form of tobacco that usually comes in a container called a tin. You can use snuff by placing a pinch or dip in your mouth between your lip and gum or between your cheek and gum. Snuff can also be inhaled through the nose. Snuff is sold in both loose form or in ready-to-use packets.

HALLUCINOGENS

HALLUCINOGENS

The next questions are about substances called hallucinogens. These drugs often cause people to see or experience things that are not real.

A list of some common hallucinogens is shown below. These and many other substances that people use as hallucinogens are often known by street names, and we can't list them all. Please take a moment to look at the substances listed below so you know what kind of drugs the next questions are about.

- LSD, also called 'acid'
- PCP, also called 'angel dust' or phencyclidine
- Peyote

INHALANTS

INHALANTS

These next questions are about liquids, sprays, and gases that people sniff or inhale to get high or to make them feel good. We are not interested in times when you inhaled a substance accidentally - such as when painting, cleaning an oven, or filling a car with gasoline.

The questions use the term 'inhalant' to include all the things listed below, as well as any other substances that people sniff or inhale for kicks or to get high. Take a moment to look at the substances listed below so you know what kinds of liquids, sprays, and gases these questions are about.

- Amyl nitrite, 'poppers,' locker room odorizers, or 'rush'
- Correction fluid, degreaser, or cleaning fluid
- Gasoline or lighter fluid
- Glue, shoe polish, or toluene
- Halothane, ether, or other paint solvents
- Lighter gases, such as butane or propane
- Nitrous oxide or 'whippits'
- Spray paints
- Other aerosol sprays

Have you ever, even once, inhaled amyl nitrite, 'poppers,' locker room odorizers, or 'rush' for kicks or to get high?

The answers that people give us about their use of inhalants are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of inhalant for kicks or to get high?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: AMYLNIT, CLEFLU, GAS, GLUE, ETHER, SOLVENT, LGAS, NITOXID, SPPAINT, AEROS, or INHNOLST. This variable also was coded as 91 if all of the above variables were coded as 91.

PAIN RELIEVERS

PAIN RELIEVERS

Now we have some questions about drugs that people are supposed to take only if they have a prescription from a doctor. We are only interested in your use of a drug if:

- the drug was not prescribed for you, or
- you took the drug only for the experience or feeling it caused.

These questions are about the use of pain relievers. We are not interested in your use of "over-the-counter" pain relievers such as aspirin, Tylenol, or Advil that can be bought in drug stores or grocery stores without a doctor's prescription.

Card A shows pictures of some different kinds of prescription pain relievers and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription pain relievers that were not prescribed for you or that you took only for the experience or feeling they caused. Please look at Card A carefully as you answer the next questions.

Have you ever, even once, used Darvocet, Darvon, or Tylenol with codeine that was not prescribed for you or that you took only for the experience or feeling it caused?

PAIN RELIEVERS

The answers that people give us about their use of prescription pain relievers are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription pain reliever that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: DARVTYLC, PERCTYLX, VICOLOR, ANLCARD, or ANLNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

NOTE: Although the Food and Drug Administration (FDA) did not approve OxyContin for medical use in the United States until late 1995, no editing was done to OXYCAGE when respondents reported first using OxyContin at ages that would indicate nonmedical use prior to FDA approval. Although no editing was done for these cases, caution is advised in interpreting data from these respondents, and particularly the farther that OXYCAGE would be from first use in 1995.

TRANQUILIZERS

TRANQUILIZERS

These next questions ask about the use of tranquilizers. Tranquilizers are usually prescribed to relax people, to calm people down, to relieve anxiety, or to relax muscle spasms. Some people call tranquilizers "nerve pills."

Card B shows pictures of some different kinds of prescription tranquilizers. These pictures show only pills, but we are interested in your use of any form of prescription tranquilizers that were not prescribed for you, or that you took only for the experience or feeling they caused.

Please look at Card B carefully as you answer the next questions.

The answers that people give us about their use of prescription tranquilizers are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription tranquilizer that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: KLONOPIN, XNAXATVN, VALMDIAZ, TRNCARD, or TRNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

STIMULANTS

STIMULANTS

These next questions ask about the use of drugs such as amphetamines that are known as stimulants, "uppers," or "speed." People sometimes take these drugs to lose weight, to stay awake, or for attention deficit disorders. We are not interested in the use of "over-the-counter" stimulants such as Dexatrim or No-Doz that can be bought in drug stores or grocery stores without a doctor's prescription.

Card C shows pictures of some different kinds of prescription stimulants and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription stimulants that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card C carefully as you answer the next questions.

Have you ever, even once, used Methamphetamine, Desoxyn, or Methedrine that was not prescribed for you or that you took only for the experience or feeling it caused? Methamphetamine is also known as crank, crystal, ice, or speed.

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

STIMULANTS

The answers that people give us about their use of prescription stimulants are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription stimulant that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: METHDES, DIETPILS, RITMPHEN, STMCARD, or STMNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

SEDATIVES

SEDATIVES

These next questions ask about the use of sedatives or barbiturates. These drugs are also called "downers," or "sleeping pills." People take these drugs to help them relax or to help them sleep. We are not interested in the use of "over-the-counter" sedatives such as Somnex, Unisom, Nytol, or Benadryl that can be bought in drug stores or grocery stores without a doctor's prescription.

Card D shows pictures of some different kinds of prescription sedatives and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription sedatives that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card D carefully as you answer the next questions.

The answers that people give us about their use of prescription sedatives are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription sedative that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: METHAQ, NEMBBARB, RESTTMAZ, SEDCARD, or SEDNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

Now think about the past 12 months, from [DATEFILL] through today. We want to know how many days you've used any prescription sedative that was not prescribed for you or that you took only for the experience or feeling it caused during the past 12 months.

What would be the easiest way for you to tell us how many days you used a prescription sedative in either of these ways?

The variable CIGCOMPNY indicates the companies that owned the labels of the cigarette brands that respondents reported using most often in the past 30 days. For brands that were sold to another company during the survey year, CIGCOMPNY reflects which company owned the brand label for the majority of the year.

The following three variables (CPNSTMFG, CPNSTMYR, CPNSTMMN), like the preceding three variables (STMFLAG, STMYR, STMMON), report lifetime, past year, and past month stimulant use. However, whereas STMFLAG, STMYR, and STMMON used the core-only methamphetamine variables MTHFLAG, MTHYR, and MTHMON in their construction, these three variables use the core-plus-noncore methamphetamine variables CPNMTHFG, CPNMTHYR, and CPNMTHMN. For details on the core-plus-noncore methamphetamine variables, please see Appendix B.4.8 of the 2008 Summary of Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

The following three variables (MTHFLAG, MTHYR, MTHMON), report recency of use for methamphetamine using only core data from the Stimulants module of the questionnaire, unlike the next three variables (CPNMTHFG, CPNMTHYR, CPNMTHMN), which use additional methamphetamine use data from the Special Drugs module. Methamphetamine use data were first added to the Special Drugs module in 2005, then were augmented in 2006 to include further clarifications. For details, please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings Report.

RECODED DRUG USE

The following three variables (CPNMTHFG, CPNMTHYR, CPNMTHMN), like the preceding three variables (MTHFLAG, MTHYR, MTHMON), report lifetime, past year, and past month methamphetamine use. However, MTHFLAG, MTHYR, and MTHMON are based only on data from the methamphetamine questions in the stimulants section of the prescription drug module of the core questionnaire. In 2005 new methamphetamine items were added to the noncore Special Drugs module to capture methamphetamine users who failed to report the drug in the prescription stimulants module. These were augmented in 2006 to include clarifications. The new noncore Special Drugs items were used to construct the final CPNMTHFG, CPNMTHYR, and CPNMTHMN variables. For details, please see Appendix B.4.8 of the 2008 Summary of Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

SPECIAL DRUGS

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

NOTE: In situations where respondents reported getting their last needle "some other way" and specified where they got the needle, the variable GNNDGET2 incorporates these "OTHER, Specify" data.

The last time you used a needle for injecting drugs, how did you get the needle?

OTCFLAG has a value of 2 when respondents reported use of OTC cold medications to get high but their "OTHER, Specify" variables COLDYR1 through COLDYR5 all had codes of "bad data" or "blank."

RECODED SPECIAL DRUGS

RECODED SPECIAL DRUGS

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The variables STNEEDLR, STNLRECR, and NEDLRECR were created to be consistent with data from corresponding variables prior to 2005. STNEEDLR was derived from the variables MTHNEEDL and OSTNEEDL. STNLRECR was derived from the variables MTNDLREC and OSTNLREC. NEDLRECR was derived from the variables HRNDLREC, CONDLREC, and STNLRECR. The variables STNEDL06, STNLRC06, and NDLREC06 also took into account data from the methamphetamine variables MTHANEDL, MTANDLRC, and MTHEVCK from the SPECIAL DRUGS module. STNEDL06 was derived from STNEEDLR and MTHANEDL. STNLRC06 was derived from STNLRECR and MTANDLRC. NDLREC06 was derived from NEDLRECR and STNLRC06.

NOTE: The following eight variables indicate whether a respondent has ever used a needle to inject any drug, heroin, cocaine, stimulants, or methamphetamine.

NOTE: NEDFLG01, NEDSTM, and NEDMTH are based only on data from the methamphetamine questions in the Stimulants module of the core questionnaire. In 2005, new methamphetamine items were added to the non-core Special Drugs module to capture methamphetamine users who failed to report the drug in the prescription Stimulants module. These were augmented in 2006 to include clarifications. The new non-core Special Drugs items were used to create CPNNDFLG, CPNNDSTM, and CPNNDMTH. For details, please see Appendix B.4.8 of the 2008 National Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

A respondent was defined as having used a needle to inject drugs based on the core questions, NEDFLG01, if they indicated at least one of the following: using a needle to inject heroin (HERNEEDL), cocaine (COCNEEDL), stimulants in the Stimulants module (STNEEDLR), or any other drug (OTDGNEDL). Otherwise, a respondent was defined as never using needles to inject drugs.

A respondent was defined as having used a needle to inject drugs based on the core-plus-noncore questions, CPNNDFLG, if they indicated at least one of the following: using a needle to inject heroin (HERNEEDL), cocaine (COCNEEDL), stimulants in the stimulants or special drugs module (STNEDL06), or any other drug (OTDGNEDL). Otherwise, a respondent was defined as never using needles to inject drugs.

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

We are interested in your opinion about the effects of using certain drugs and other substances, about whether it's difficult or easy to get drugs, and the extent to which drugs are available in your neighborhood.

Please indicate how much you think people risk harming themselves physically and in other ways when they do each of the following activities.

If you're not sure, choose an answer for the amount of risk that comes closest to what you think might be true for that activity.

BLUNTS

BLUNTS

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

Sometimes people take some tobacco out of a cigar and replace it with marijuana. This is sometimes called a "blunt".

NOTE: When respondents previously reported never using marijuana but reported lifetime use of cigars with marijuana in them (i.e., "blunts"), a consistency check was triggered only when respondents reported using blunts in the past 30 days. Therefore, BLNTEVER was assigned a code of 11 when respondents reported using blunts but they did not report use in the past 30 days, and they previously had reported never using marijuana.

BLUNTS

NOTE: The variable BLNTNOMJ was assigned a code of 5 if respondents were not asked this question because they reported in the TOBACCO module that they smoked cigars in the past 30 days but reported in the BLUNTS module that they did not smoke cigars with marijuana in them in the past 30 days. It could be logically inferred that all of the cigars that these respondents smoked in the past 30 days did not have marijuana in them. BLNTNOMJ was assigned codes of 14 or 24 if respondents were not asked this question and they reported in the BLUNTS module that they smoked a cigar with marijuana in it in the past 30 days. A code of 14 was assigned if respondents reported in the TOBACCO module that they had smoked cigars but not in the past 30 days. A code of 24 was assigned if respondents reported in the TOBACCO module that they had never smoked part or all of a cigar.

Earlier, you reported that you had smoked part or all of a cigar during the past 30 days. During the past 30 days, did you smoke any cigars that did not have marijuana in them?

NOTE: HALDAFLG is a flag variable that indicates differences in how the hallucinogen variables in the SUBSTANCE DEPENDENCE AND ABUSE MODULE would have been edited based on the logic in 2007, when only past year users from the core HALLUCINOGENS module were routed into the corresponding questions, and how these hallucinogen variables were edited this year. Editing this year took into account logic that routed past year users of ketamine (from KETAREC), the tryptamines DMT, AMT, and 5-MeO-DIPT/"Foxy" (from TRYPREC), and Salvia divinorum (from SALVREC) into these dependence and abuse questions for hallucinogens.

NOTE: STMDAFLG is a flag variable that indicates differences in how the stimulant variables in the SUBSTANCE DEPENDENCE AND ABUSE MODULE would have been edited based on logic in earlier years and how these stimulant variables were edited this year. In 2004, past year users were routed into the corresponding questions if they reported past year nonmedical use of prescription stimulants or methamphetamine in the core stimulants module or if they reported in the SPECIAL DRUGS module that they used methamphetamine or other stimulants with a needle (from MTNDLREC and OSTLNREC, respectively). Beginning in 2005 (and continuing this year), past year methamphetamine users from the SPECIAL DRUGS variables MTHAREC and MTANDLRC also were asked about stimulant dependence or abuse. STMDAFLG is coded as 1 through 6 if the inclusion of MTHAREC and MTANDLRC changed the outcome for editing of the stimulant dependence or abuse variables. This year, respondents who reported past year nonmedical use of Adderall (from ADDEREC) were eligible to be asked these questions as well. STMDAFLG is coded as 11 through 16 if the inclusion of ADDEREC changed the outcome for editing of these variables.

NOTE: What follows are the imputation-revised versions of the 17 nicotine dependence variables that make up the Nicotine Dependence Syndrome Scale (NDSS). Missing values were only imputed if only one of the 17 variables had a missing value. Users should note that the imputed values for these variables are predicted values from regression models. These predicted values are not integers, and do not correspond directly to the integer responses from the questionnaire. It would be advisable to make the necessary adjustments (such as rounding or otherwise making the non-integer values into integers) when doing cross-tabulations.

RECODED SUBSTANCE DEPENDENCE AND ABUSE

RECODED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from the following two sections: Substance Dependence and Abuse or Imputed Substance Dependence and Abuse.

NOTE: The following recoded dependence variables were defined based on the dependence criteria according to the Nicotine Dependence Syndrome Scale (NDSS) and the Fagerstrom Test of Nicotine Dependence (FTND) for respondents who reported smoking cigarettes in the past month. The NDSS score, NDSSANSP, is calculated as the average score over 17 questions pertaining to five aspects of dependence. This average score was only computed for those respondents who had a valid response (based on actual reporting and imputation) to all 17 questions. Respondents who did not have valid responses (based on actual reporting and imputation) for all 17 questions were coded as SAS missing. Based on the NDSS score, a respondent was defined as having nicotine dependence, NDSSDNSP=1, if their average score was greater than or equal to 2.75. The FTND measure is defined by assessing how soon after waking a respondent had their first cigarette (CIGWAKE). Based on the FTND scale, a respondent was defined as having nicotine dependence, FTNDDNSP=1, if the first cigarette was smoked within 30 minutes of waking up on the days they smoked (CIGWAKE=1 or 2) and the respondent reported smoking cigarettes in the past month. Based on the NDSS and the FTND, a respondent who reported smoking cigarettes was defined as having nicotine dependence in the past month, DNICNSP=1, if they met either the NDSS or the FTND criteria for dependence. Specific details for each of the nicotine dependence related variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

RECODED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: The following recoded dependence variables were defined based on the dependence criteria listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). Specific details for each of the 10 individual drug dependence variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

A respondent was defined as having marijuana, inhalant, hallucinogen, or tranquilizer dependence (DEPNDRJ, DEPNDINH, DEPNDHAL, DEPNDTRN) if the respondent reported a positive response to three or more of the following six dependence criteria:

1. Spent a great deal of time over a period of a month getting, using, or getting over the effects of the substance (XXXLOTTM=1 or XXXGTOVR=1)
2. Unable to keep set limits on substance use or used more often than intended (XXXKPLMT=2)
3. Needed to use substance more than before to get desired effects or noticed that using the same amount had less effect than before (XXXNDMOR=1 or XXXLSEFX=1)
4. Unable to cut down or stop using the substance every time he or she tried or wanted to (XXXCUTEV=2)
5. Continued to use substance even though it was causing problems with emotions, nerves, mental health, or physical problems (XXXEMCTD=1 or XXXPHCTD=1)
6. Reduced or gave up participation in important activities due to substance use (XXXLSACT=1)

An additional question pertaining to withdrawal symptoms was asked for the following six drugs: alcohol, pain relievers, cocaine, heroin, sedatives, and stimulants. The withdrawal question asked the respondent if they had experienced substance specific withdrawal symptoms at one time that lasted for longer than a day after they cut back or stopped using (XXXWDSMT=1). The specific number and type of listed withdrawal symptoms varied by substance. A respondent was defined as having alcohol, pain reliever, cocaine, heroin, sedative, or stimulant dependence (DEPNALC, DEPNDANL, DEPNDCCOC, DEPNDHER, DEPNDSED, DEPNDSTM) if the respondent reported a positive response to three or more of the seven dependence criteria (including the six standard criteria listed above plus a seventh withdrawal symptom criteria).

Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the substance dependence and withdrawal questions, it is possible for these dependence recode variables to be inconsistent with the imputed substance use and frequency of use variables. The types of inconsistencies that can occur differ by substance since different combinations of the skip logic criteria were used for each substance. Specific details about these inconsistencies are included in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

NOTE: The following abuse variables were defined based on the abuse criteria listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). Specific details for each of the 10 individual substance abuse variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

A respondent was defined as having alcohol, marijuana, cocaine, heroin, hallucinogen, inhalant, pain reliever, tranquilizer, stimulant, or sedative abuse (ABUSEALC, ABUSEMRJ, ABUSECO, ABUSEHER, ABUSEHAL, ABUSEINH, ABUSEANL, ABUSESTRN, ABUSEESTM, ABUSESED) if they reported a positive response to one or more of the following four abuse criteria and was determined not to be dependent upon the substance of interest:

1. Respondent reported having serious problems due to substance use at home, work or school (XXXSERPB=1)
2. Respondent reported using substance regularly and then did something where substance use might have put them in physical danger (XXXPDANG=1)
3. Respondent reported substance use causing actions that repeatedly got them in trouble with the law (XXXLAWTR=1)
4. Respondent reported having problems caused by substance use with family or friends (XXXFMFPB=1) and continued to use substance even though it was thought to be causing problems with family and friends (XXXFMCTD=1)

Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the abuse questions, it is possible for these abuse recode variables to be inconsistent with the imputed substance use and frequency of use variables. The types of inconsistencies that can occur differ by substance since different combinations of the skip logic criteria were used for each substance. Specific details about these inconsistencies are included in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

In addition, because the dependence and abuse variables are mutually exclusive with dependence taking precedence (i.e., dependence is determined first and respondents are only classified as having abused if they are not already classified as dependent, regardless of responses to the abuse questions), it is possible for the variables showing abuse of a combination of substances to not correspond with the abuse status of those individual substances. For example, a respondent who is classified as having abused cocaine in the past year may be classified as not having abused illicit drugs because they were dependent on marijuana and already classified as being dependent on illicit drugs.

NOTE: For the variable BKOTH, a code of 3 indicates that respondents did not originally answer "yes" to any of the questions about specific offenses for which they were arrested/booked in the past 12 months, including the question about "some other offense." However, these respondents subsequently specified a valid response for an offense in the past 12 months. A code of 5 in BKOTH indicates that respondents reported being arrested/booked at least once in the past 12 months but did not indicate at least one offense for which they were arrested in that period.

The following "source of last used marijuana bought" variable, MJPBTFRM, is defined so that respondents with unknown data for how they got their last used marijuana (MMGETMJ) or whether they bought marijuana (MMBTPYR) in the past year are included in the "Source Unspecified" level, MJPBTFRM=4. To produce estimates among respondents who reported last obtaining marijuana by buying it or buying marijuana in the past year, the analysis should be restricted to MMGETMJ=1 or MMBTPYR=1.

The following "source of last used free marijuana" variable, MJPFREGT, is defined so that respondents with unknown data for how they got their last used marijuana (MMGETMJ) or whether they bought (MMBTPYR) or traded something (MMTRADE) for marijuana in the past year are included in the "Source Unspecified" level, MJPFREGT=4. This differs from the "location where last used free marijuana was received" variable, MJPFREPL2, where these unknown cases are defined as SAS missing (MJPFREPL2=.). To produce estimates among respondents who reported obtaining their last used marijuana for free and reported not buying or not trading something for marijuana in the past year, the analysis should be restricted to MMGETMJ=3 and MMBTPYR=2 and MMTRADE=2.

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

NOTE: The variables MRJYRBFR and MRJAGLST were not edited with respect to one another. Therefore, inconsistencies could exist between these two variables.

NOTE: Data for STMAGLST, STIMYLU, and STIMMLU were edited for consistency with data for MTHAGLST, METHYLU, and METHMLU (see below) if respondents reported nonmedical use of methamphetamine in the core STIMULANTS module. In that context, nonmedical use of methamphetamine could include the prescription forms Desoxyn or Methedrine. Respondents in this survey year who reported methamphetamine use in the noncore SPECIAL DRUGS module also were asked questions about their last use of methamphetamine, without reference to prescription forms of the drug. STMAGLST, STIMYLU, and STIMMLU were not edited for consistency with data on the last use of methamphetamine for these additional noncore methamphetamine users. Consequently, STMAGLST, STIMYLU, and STIMMLU could indicate lifetime nonuse of "prescription" stimulants when the corresponding methamphetamine data in MTHAGLST, METHYLU, and METHMLU indicate that respondents were methamphetamine users. Therefore, documentation of codes for 81, 981, 9981, 91, 991, and 9991 in STMAGLST, STIMYLU, and STIMMLU specifically indicates that respondents had never used prescription stimulants nonmedically.

Earlier, the computer recorded that, during the past 12 months, you used prescription stimulants that were not prescribed for you or that you took only for the experience or feeling they caused.

Now think about the last time you used a prescription stimulant that was not prescribed for you or that you took only for the experience or feeling it caused. How did you get this prescription stimulant?

NOTE: Respondents were assigned legitimate skip codes of 99 or 89 in CIGYRBFR if they reported in the core TOBACCO module that they last smoked a cigarette more than 3 years ago. Logically, these respondents would not have smoked a cigarette in the past 12 to 24 months. In addition, CIGYRBFR was not edited with respect to CIGAGLST or CIGDLLST. Therefore, inconsistencies could exist between CIGYRBFR and these other variables.

Earlier questions were about the past 12 months. This question is about the year before that, that is, from [DATEFILL - 12 MONTHS] to [DATEFILL]. During that year, beginning [DATEFILL - 12 MONTHS] and ending [DATEFILL], did you smoke part or all of a cigarette, even once?

RECODED PRIOR SUBSTANCE USE

Note: The following five variables pertain to the source of a respondent's most recent nonmedical use of prescription pain relievers (ANLLTSC), prescription tranquilizers (TRNLTS2), prescription stimulants (STMLTS2), prescription sedatives (SEDLTS2), and methamphetamine (MTHLTSC4) within the past year.

For each variable, excluding MTHLTSC4, there are 11 mutually exclusive categories; 10 categories for specific sources and one category for those respondents who did not indicate using the drug in the past year. Since methamphetamine is not available by prescription, the first 4 categories are not applicable thus there are only 7 mutually exclusive categories for MTHLTSC4; 6 sources and one category for non past year users. The categories for the specific sources take into account responses from past month users who indicated a single source during the past 30 days, past month users who indicated their most recent source after selecting multiple sources during the past 30 days, and past year users who indicated their most recent source of drug use.

Questions related to source of stimulant use pertain only to prescription stimulants and are not asked of respondents who were users of only methamphetamine, thus those respondents who indicated non-prescription stimulant use only (STMGTLA2=99) were classified as having "No Past Year Rx Use" (STMLTS2=11).

Based on the following conditions, a respondent was classified in one of the following 12 categories (including SAS missing) for the source of most recent prescription drug use in the past year for the variables, ANLLTSC, TRNLTS2, STMLTS2, and SEDLTS2:

1. Got From One Doctor (XXXGTLA2=1, 11 or only XXXRX1DR=1, 3, 5)

The variable for the source of most recent methamphetamine use in the past year, MTHLTSC2, was defined by including respondents routed from the core Stimulants module as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

MTHLTSC2 is similar to the variables MTHLTSC and MTHLTSC3, which were created in the 2005 NSDUH. The difference between these variables is how the noncore Special Drug responses were handled. MTHLTSC excluded respondents if they were routed to the source questions based only on their responses to the noncore questions, and MTHLTSC3 did not exclude respondents based on their noncore responses.

As indicated below, the imputed recency variable, CPNMTHYR, was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. The categories were defined as follows:

(5) From Friend or Relative for Free (Valid Past Year Use [CPNMTHYR=1] and MTHGTLAS=5,15 or only MTHFRFRE=1,3,5)

(6) Bought from Friend or Relative (Valid Past Year Use [CPNMTHYR=1] and MTHGTLAS=6,16 or only MTHFRBUY=1,3,5)

(7) Took from Friend or Relative without Asking (Valid Past Year Use [CPNMTHYR=1] and MTHGTLAS=7,17 or only MTHFRFRTKE=1,3,5)

(8) Bought from Drug Dealer or Other Stranger (Valid Past Year Use [CPNMTHYR=1] and MTHGTLAS=8,18 or only MTHDEALR=1,3,5)

(9) Bought on the Internet (Valid Past Year Use [CPNMTHYR=1] and MTHGTLAS=9,19 or only MTHINET=1,3,5)

(10) Some Other Way (Valid Past Year Use [CPNMTHYR=1] and [MTHGTLAS=10 and MTHGTOS2=10,11 OR only MTHOTHWY=1,3,5 and MTHOTHS2=10])

(11) No Lifetime or Past Year Use (CPNMTHYR=0)

(SAS Missing) Unknown/Invalid Source (Valid Past Year Use [CPNMTHYR=1] and ([MTHGTLAS=85,94,97,98] or [MTHGTLAS=10 and MTHOTHS2=85,94,97,98] or [only MTHOTHWY=1 and MTHOTHS2=85,94,97,98]))

RECODED PRIOR SUBSTANCE USE

The variable for the source of most recent methamphetamine use in the past year, MTHLTSC4, was defined by including respondents routed from the core Stimulants module as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

As indicated below, the imputed core-plus-noncore past year methamphetamine use variable (CPNMTHYR) was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. The categories were defined as follows:

5. From Friend or Relative for Free (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=5, 15 or only MTHFRFRE=1, 3, 5)
6. Bought from Friend or Relative (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=6, 16 or only MTHFRBUY=1, 3, 5)
7. Took from Friend or Relative without Asking (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=7, 17 or only MTHFRTKE=1, 3, 5)
8. Bought from Drug Dealer or Other Stranger (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=8, 18 or only MTHDEALR=1, 3, 5)
9. Bought on the Internet (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=9, 19 or only MTHINET=1, 3, 5)
10. Some Other Way (Valid Past Year Use [CPNMTHYR=1] and [MTHGTLA2=10 and MTHGTOS2=10, 11-38, 71 or only MTHOTHWY=1, 3, 5 and MTHOTHS2=10, 11-38, 71])
11. No Lifetime or Past Year Use (CPNMTHYR=0)

(SAS Missing) Unknown/Invalid Source (Valid Past Year Use [CPNMTHYR=1] and ([MTHGTLA2=85, 93, 94, 97, 98] or [MTHGTLA2=10 and MTHGTOS2=70, 72, 73, 74, 75, 85, 94, 97, 98] or [MTHGTLA2=99 and only MTHOTHWY=1 and MTHOTHS2=70, 72, 73, 74, 85, 94, 97, 98]))

NOTE: For the following 40 variables, to produce estimates among adults with past month prescription drug use, the analysis will need to be restricted by the specific past month prescription drug use variable (XXXMON=1).

The following variable, MTHOTHW2, was defined as yes if a respondent reported past month methamphetamine use (CPNMTHMN=1) and that friends/relatives got methamphetamine in "some other way" (MTHOTHWY=1, 3, 5) and their write-in response was classified as a valid other-specify source (MTHOTHS2=10, 11-38, 71). MTHOTHW2 was defined as no if a respondent reported past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) friends/relatives did not get methamphetamine in "some other way" (MTHOTHWY=6) or (2) friends/relatives got methamphetamine in "some other way" (MTHFFOTH=1, 3, 5) and their write-in response was classified as an invalid other-specify source (MTHOTHS2=5-9). MTHOTHW2 was recoded to SAS missing if a respondent indicated past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) the respondent indicated that during the past 30 days they got methamphetamine in "some other way" (MTHOTHWY=1, 3, 5) and their write-in response was classified as an invalid or unknown source (MTHOTHS2=70, 72-74, 85, 94, 97, 98) or (2) a response to getting methamphetamine "some other way" was unknown (MTHOTHWY=85, 93, 94, 97, 98).

RECODED PRIOR SUBSTANCE USE

NOTE: In the questionnaire, a respondent who used methamphetamine and prescription drugs in the past month was administered a question regarding the source of their past month use. Any respondent who gave multiple past month sources or was a past year user was administered a question regarding the source of the drug during their most recent use. If they indicated that their most recent source was a 'friend or relative for free' from either of these questions, then a respondent was administered a follow-up question that asked the source the friend/relative had obtained the drug from. The following 5 variables pertain to the source from which a respondent's friend or relative obtained the drug for prescription pain relievers (ANLSRCF2), prescription tranquilizers (TRNSRCF2), prescription stimulants (STMSRCF2), prescription sedatives (SEDSRCF2), and methamphetamine (MTHSRCF2) within the past year. These 5 variables are similar to the previously defined source of a respondent's friend or relative's most recent nonmedical use variables (XXXSRCFR) with the exception that SAS missing and level 11 have been combined into a single SAS missing level. Starting with the 2014 NSDUH, this version will be the only version available.

For each variable, excluding MTHSRCF2, there are 10 mutually exclusive categories for specific sources. Since methamphetamine is not available by prescription, the first 4 categories are not applicable thus there are only 6 mutually exclusive categories for MTHSRCF2. The categories for the specific sources take into account responses from past month users who indicated a single source during the past 30 days, past month users who indicated their most recent source after indicating multiple sources during the past 30 days, and past year users who indicated their most recent source of drug use.

Questions related to source of stimulant use pertain only to prescription stimulants and are not asked of respondents who were users of only methamphetamine, thus those respondents who indicated non-prescription stimulant use only (STMGTLA2=99) were classified as having "No Lifetime or Past Year Rx Use" (STMSRCF2=).

Based on the following conditions, a respondent was classified in one of the following 11 categories for the source of most recent prescription drug use in the past year for the variables, ANLSRCF2, TRNSRCF2, STMSRCF2, and SEDSRCF2:

1. Got from One Doctor ((XXXGTLA2=5 and XXXFFLAS=1, 11) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFF1DR=1, 3, 5))
2. Got from More Than One Doctor ((XXXGTLA2=5 and XXXFFLAS=2, 12) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFDRS=1, 3, 5))
3. Wrote Fake Prescription ((XXXGTLA2=5 and XXXFFLAS=3, 13) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFAKE=1, 3, 5))
4. Stole from Dr Office, Clinic, Hospital, or Pharmacy ((XXXGTLA2=5 and XXXFFLAS=4, 14) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFSTL=1, 3, 5))
5. Got from Friend or Relative for Free ((XXXGTLA2=5 and XXXFFLAS=5, 15) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFREE=1, 3, 5))

RECODED PRIOR SUBSTANCE USE

NOTE: In the questionnaire, a respondent who used methamphetamine and prescription drugs in the past month was administered a question regarding the source of their past month use. Any respondent who gave multiple past month sources or was a past year user was administered a question regarding the source of the drug during their most recent use. If they indicated that their most recent source was a 'friend or relative for free' from either of these questions, then a respondent was administered a follow-up question that asked the source the friend/relative had obtained the drug from. The following 5 variables pertain to the source from which a respondent's friend or relative obtained the drug for prescription pain relievers (ANLSRCFR), prescription tranquilizers (TRNSRCFR), prescription stimulants (STMSRCFR), prescription sedatives (SEDSRCFR), and methamphetamine (MTHSRCFR) within the past year.

For each variable, excluding MTHSRCFR, there are 11 mutually exclusive categories; 10 categories for specific sources that the friend/relative obtained the drug from and one category for a respondent who did not indicate using the drug in the past year (or lifetime) or a respondent that indicated in one of the previous questions that they had obtained the drug for most recent use from a valid source other than a friend or relative for free. Since methamphetamine is not available by prescription, the first 4 categories are not applicable thus there are only 7 mutually exclusive categories for MTHSRCFR; 6 sources and one level for non past year users or past year users who obtained the drug from a valid source other than a friend or relative for free. The categories for the specific sources take into account responses from past month users who indicated a single source during the past 30 days, past month users who indicated their most recent source after indicating multiple sources during the past 30 days, and past year users who indicated their most recent source of drug use. Anyone who was administered at least one of these four source questionnaire items, but did not have a valid answer for one or more of the four questions was generally classified as a SAS system missing '.' for these five variables.

During the 2013 data processing some errors were detected. Not all valid levels of the other-specify variables, XXXGTOS2 and XXXOTHS2, were considered when distinguishing between an unknown/invalid source and a valid source not from a friend or relative for free. Therefore, it is possible that some respondents currently classified as having a valid source of most recent use not from a friend or relative for free (XXXSRCFR=11) do not actually have a valid source. For example, a respondent who indicated they obtained prescription pain relievers in some other way for their last use (ANLGTLA2=10) and then indicated the some other way was a specific city or state in the United States (ANLGTOS2=70) is classified as having a valid source not from a friend or relative for free (ANLSRCFR=11). However, this response is not a valid way of obtaining pain relievers; therefore, the respondent should have a SAS missing value for ANLSRCFR.

The overall impact of these inconsistencies is anticipated to be small since it is believed that most analysts will utilize these variables similar to how they are used in the detailed tables. That is, it is assumed that most users would either collapse or omit level 11 and the SAS missing level because only categories 1 through 10 apply to the source from which the friend/relative obtained the drug. As a result, it is recommended that the SAS missing and level 11 not be used as two distinct levels in analyses. Starting with the 2014 NSDUH, these 5 variables will no longer be available on the data file; only the corrected versions (XXXSRCF2) that combine SAS missing and level 11 into a single level will be available. To allow for comparability across years, the erroneous variables have been retained on the 2013 data file. For the 2013 NSDUH both the erroneous variables and the corrected variables have been retained.

Questions related to source of stimulant use pertain only to prescription stimulants and are not asked of respondents who were users of only methamphetamine, thus those respondents who indicated non-prescription stimulant use only (STMGTLA2=99) were classified as having "No Lifetime or Past Year Rx Use" (STMSRCFR=11).

Based on the following conditions, a respondent was classified in one of the following 12 categories for the source of most recent prescription drug use in the past year for the variables, ANLSRCFR, TRNSRCFR, STMSRCFR, and SEDSRCFR:

1. Got from One Doctor ((XXXGTLA2=5 and XXXFFLAS=1, 11) or (XXXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFF1DR=1, 3, 5))

RECODED PRIOR SUBSTANCE USE

Due to the outcome of the 2006 Methamphetamine Analysis Study, the variable for a friend or relative's source of methamphetamine for the respondent's most recent methamphetamine use in the past year when they reported they received this most recent drug from a friend or relative for free, MTHSRCF2, was defined by including respondents routed from the core Stimulants module, as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

As shown below, the imputed recency variable, CPNMTHYR, was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. Please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings for more information.

RECODED PRIOR SUBSTANCE USE

Due to the outcome of the 2006 Methamphetamine Analysis Study, the variable for a friend or relative's source of methamphetamine for the respondent's most recent methamphetamine use in the past year when they reported they received this most recent drug from a friend or relative for free, MTHSRCFR, was defined by including respondents routed from the core Stimulants module, as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

As described in the comment above ANLSRCFR, during the 2013 data processing some errors were detected. Not all valid levels of the other-specify variables, XXXGTOS2 and XXXOTHS2, were considered when distinguishing between an unknown/invalid source and a valid source not from a friend or relative for free. Therefore, it is possible that some respondents currently classified as having a valid source of most recent use not from a friend or relative for free (XXXSRCFR=11) do not actually have a valid source.

Additionally, for MTHSRCFR, not all past 30 day users with a valid source other than a friend or relative for free have been correctly classified. In cases where the respondent legitimately skipped the source of last use question (MTHGTLA2=99) but gave a single valid source other than from a friend or relative for free to the past 30 day source question (MTHFRBUY=1,3 or MTHDEALR=1,3 or MTHFRFRTKE=1,3 or MTHINET=1,3 or (MTHOTHWY=1 and MTHOTHS2=valid "other" response, levels 11-34, 36, 38,39,71)), the respondent is classified as having an unknown/invalid source (MTHSRCFR=.) instead of being classified as having a valid source of most recent use not from a friend or relative for free (MTHSRCFR=11). For example, a respondent who answered the past 30 day question with the single response 'Bought from a drug dealer or other stranger' (MTHDEALR=1) would be skipped out of the source of last use question and would have a legitimate skip value (MTHGTLA2=99). This respondent is classified as having an unknown/invalid source (MTHSRCFR=.) based on the skip code; however, the respondent obtained the drug from a drug dealer or other stranger which is a valid source that is not from a friend or relative for free and should be classified accordingly (MTHSRCFR=11).

As shown below, the imputed recency variable, CPNMTHYR, was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. Please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings for more information.

NOTE: The following 46 variables were created to capture all a respondent's friend or relative's reported source of past month prescription drug and methamphetamine (MTH) use. The prescription drugs include pain relievers (ANL), tranquilizers (TRN), stimulants (STM), and sedatives (SED).

NOTE: For the following 40 variables, to produce estimates among adults with past month prescription drug use, the analysis will need to be restricted by the specific past month prescription drug use variable (XXXMON=1).

SUBSTANCE TREATMENT

NOTE: Respondents were not asked questions in the SUBSTANCE TREATMENT module if they did not report lifetime use of alcohol, marijuana, cocaine, heroin, hallucinogens, inhalants, methamphetamine, or lifetime use of prescription psychotherapeutics (pain relievers, tranquilizers, stimulants, or sedatives) for nonmedical reasons. Codes of 81 or 91 in the edited SUBSTANCE TREATMENT variables indicate that the questions did not apply because respondents were nonusers of all of these substances.

These next questions deal with treatment for alcohol and drug problems, not including cigarettes. Please report treatment or counseling designed to help you reduce or stop your alcohol or drug use. Please include detoxification and any other treatment for medical problems associated with your alcohol or drug use.

Have you ever received treatment or counseling for your use of alcohol or any drug, not counting cigarettes?

NOTE: NDTXFTR was assigned a code of 11 if the respondent originally reported making an effort to obtain treatment but at least one of the following occurred: (a) the respondent was logically inferred to have gotten treatment in the past 12 months (TXYREVER=3); or (b) the respondent did not perceive a need for treatment for use of any of the specific drugs that he/she was asked about (i.e., all questions about the perceived need for treatment for specific drugs were answered as "no").

NOTE: The variables TXALONEV, TXALONAG, TXDRONEV, TXDRONAG, TXALCDEV, TXALCDAG, TXDRGAEV, and TXDRGAAG pertain to respondents who were lifetime recipients of substance treatment but who had not received treatment in the past year. TXALONEV and TXALONAG pertain to respondents who were lifetime alcohol users but had not reported lifetime use of other drugs. TXDRONEV and TXDRONAG pertain to respondents who did not report lifetime use of alcohol but reported lifetime use of other drugs. TXALCDEV, TXALCDAG, TXDRGAEV, and TXDRGAAG pertain to respondents who were lifetime users of alcohol and other drugs.

NOTE: TXALONEV was assigned a value of 11 or 12 when respondents originally reported that they had not received treatment in the past 12 months but they were logically inferred to have received treatment in that period (TXYREVER=3). Respondents who themselves reported that they had gotten treatment in the past 12 months were asked a different set of questions. However, respondents who reported that they had ever received treatment for their use of alcohol but were logically inferred to have gotten treatment in the past 12 months cannot be inferred to have received alcohol treatment in that period (TXALONEV=11). TXALONEV was assigned a value of 22 when respondents were lifetime users of alcohol but had never used (or misused) marijuana, cocaine, heroin, hallucinogens, inhalants, prescription psychotherapeutics (pain relievers, tranquilizers, stimulants, or sedatives), and they reported that they had never received treatment for their use of alcohol.

NOTE: TXSHGFLG compares the consistency of data in the self-help group variable TX12MSHG and the self-help group variable TXYRSHG. TXSHGFLG has a value of 1 when TX12MSHG was answered as "yes" but TXYRSHG indicates that respondents did not receive treatment in a self-help group, even though they reported that they received treatment in the past 12 months. TXSHGFLG has a value of 2 when TX12MSHG was answered as "yes" but TXYREVER or TXEVER indicated that respondents never received any treatment in the past 12 months or lifetime, respectively. TXSHGFLG has a value of 3 when TX12MSHG was not answered as "yes" but TXYRSHG indicates that respondents were logically inferred to have gotten treatment in a self-help group in the past 12 months. TXSHGFLG has a value of 4 when TX12MSHG was answered as "yes" but TXYRSHG was answered as "don't know" or "refused" or it was blank. Finally, TXSHGFLG has a value of 5 when TX12MSHG was answered as "don't know" or "refused" but TXYRSHG was answered as "no."

Where two question wordings appear for a given variable, the first wording was what respondents received if they reported that they were no longer in treatment. The second wording was what respondents received if they reported that they were still in treatment.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from two of the preceding sections: Substance Treatment or Recoded Substance Dependence and Abuse.

NOTE: Respondents who were routed into the Drug Treatment module based solely on their responses from the Special Drugs module questions were classified as not receiving substance use treatment.

NOTE: The following seven recoded variables contain information about receiving treatment at any location in lifetime or in the past year.

A respondent was classified as receiving treatment in the past year for alcohol use but not illicit drug use at a specialty facility, SPCALNIL, that is a hospital (inpatient), a rehabilitation facility (in or outpatient), or at a mental health center if they met one of the following conditions:

1. Reported receiving only alcohol treatment in the past year (TXYRADG=1) and that treatment was received at a specialty facility (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81).
2. Reported receiving only alcohol treatment in the past year but also reported receiving treatment for illicit drug use during their last or current treatment (TXYRADG=11), the reported alcohol treatment was received at one of the four specialty facilities (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81), and their last or current treatment was not at one of the four specialty facilities (LASTTXSP=0).
3. Reported receiving both illicit drug and alcohol treatment in the past year (TXYRADG=3, 6) and reported specifically receiving only alcohol treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD=1 or TXYRINAD=1 or TXYRPOAD=1 or TXYRMHAD=1 or (TXYROTAD=1 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81)) but did not report specifically receiving illicit drug treatment or illicit drug and alcohol treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD NE 2, 3 or TXYRINAD NE 2, 3 or TXYRPOAD NE 2, 3 or TXYRMHAD NE 2, 3 or (TXYROTAD NE 2, 3 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81) or TXYROTS2 NE 1-4, 45, 46, 56, 64, 76, 81).

For the logically assigned levels of TXYRADG, the creation of this variable may be unclear; therefore, details for classifying respondents as not receiving alcohol only treatment at a specialty facility for these logically assigned levels are below:

1. Reported receiving alcohol treatment in the past year but illicit drug treatment status is unknown (TXYRADG=4) or reported receiving illicit drug treatment in the past year but alcohol treatment status is unknown (TXYRADG=5).
2. Reported receiving only illicit drug treatment in the past year but also reported receiving treatment for alcohol during their last or current treatment (TXYRADG=12).
3. The following variable, TXRNSTIG, was assigned a positive response if the respondent felt a need for substance use treatment in the past year (FLNDILAL=1) and reported any of the following reasons for not receiving substance use treatment in the past year: treatment might cause neighbors/community to have negative opinion (NDTXNBR=1,11 or NDMRNBR=1), concerned treatment might have negative effect on their job (NDTXJOB=1 or NDMRJOB=1) or did not want others to find out (NDTXFOUT=1,11 or NDMRFOUT=1,3). A negative response was assigned if the respondent felt a need for substance use treatment in the past year and did not specify any of the reasons listed above.

NOTE: HTINCHE2 was recoded to inches from reports of heights in feet and inches, meters and centimeters, or centimeters only. Heights in meters and centimeters first were converted to centimeters. For respondents who chose to report their height in metric units, a conversion factor was applied of 0.393701 inches to 1 centimeter to produce a height in inches. HTINCHE2 was then rounded to the nearest integer and top coded at 75 inches and bottom coded at 55 inches.

About how tall are you, without shoes? First, please type in the number of feet, then press [ENTER].

NOTE: WTPOUND2 was recoded to pounds from reports of weights in kilograms. For respondents who chose to report their weight in kilograms, a conversion factor was applied of 2.20462 pounds to 1 kilogram to produce a weight in pounds. Females aged 12 to 44 who were currently pregnant were asked to report their weight before they got pregnant. WTPOUND2 was then rounded to the nearest integer and top coded at 295 pounds and bottom coded at 75 pounds.

NOTE: Beginning in 2014, respondents are not asked the question corresponding to HPQTT0B if they were lifetime but not past year users of tobacco products. If respondents reported that they last smoked cigarettes, used smokeless tobacco, or smoked cigars more than 12 months prior to their interview date and that they never smoked tobacco in a pipe, codes of 93 in HPQTT0B indicate that these respondents had not used tobacco products in the past 12 months. However, respondents who smoked tobacco in a pipe in their lifetime were asked whether they did so in the past 30 days but they were not asked whether they smoked tobacco in a pipe more than 30 days ago but within the past 12 months. Therefore, the code of 93 in HPQTT0B also applied to respondents who smoked tobacco in a pipe in their lifetime but not in the past 30 days and who last used other tobacco products more than 12 months ago (or never used other tobacco products). If respondents reported never using tobacco products or not using them in the past 12 months (including not smoking tobacco in a pipe in the past 30 days) and also that they did not have any health care visits in the past 12 months (emergency room visits, overnight hospitalizations, or outpatient visits), indication that these respondents had not used tobacco products in the past 12 months or in their lifetime (as indicated by codes of 91 or 93) took precedence over assignment of codes to indicate that these respondents did not have any health care visits in the past 12 months. Codes of 89 or 99 in HPQTT0B applied to respondents who used tobacco products in the past 12 months or whose status as a tobacco user in the past 12 months was unknown but who did not have any health care visits in the past 12 months.

NOTE: In HPDRGTLK, if respondents reported never using marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine or not using these substances in the past 12 months and also that they did not have any health care visits in the past 12 months (emergency room visits, overnight hospitalizations, or outpatient visits), indication that respondents never used these drugs or last used any of them more than 12 months ago (as indicated by codes of 91 or 93) took precedence over assignment of codes to indicate that these respondents did not have any health care visits in the past 12 months. Codes of 99 in HPDRGTLK applied to respondents who used any of these drugs in the past 12 months or whose status as a past year user was unknown but who did not have any health care visits in the past 12 months. Also, a small number of respondents were routed to the question corresponding to HPDRGTLK but after the variables for most recent use of these drugs had been edited, it was determined that the respondents never used these drugs or that they last used any of them more than 12 months ago. If respondents reported that a health professional discussed their drug use with them in the past 12 months but the edited variables for most recent use of these substances indicated that respondents never used any of them, then HPDRGTLK was assigned a code of 11; otherwise, data in HPDRGTLK were overwritten with a code of 81. If respondents reported that a health professional discussed their drug use with them in the past 12 months but the edited variables for most recent use of these substances indicated that most recent use occurred more than 12 months ago, then HPDRGTLK was assigned a code of 21; otherwise, data in HPDRGTLK were overwritten with a code of 83.

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

These next questions are about treatment and counseling for problems with emotions, nerves or mental health. Please do not include treatment for alcohol or drug use.

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

During the past 12 months, have you stayed overnight or longer in a hospital or other facility to receive treatment or counseling for any problem you were having with your emotions, nerves, or mental health? Please do not include treatment for alcohol or drug use.

RECODED ADULT MENTAL HEALTH TREATMENT

NOTE: The variables in this section are recoded variables that were created from one or more variables from the following sections: Adult Mental Health Treatment and Recoded Substance Treatment.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

The following variable, AMHOUTP3, is defined as SAS missing if a respondent reported receiving outpatient mental health treatment/counseling in the past year at "Some Other Place" (AUOPTYR=1, 3 and only AUOPOTOP=1, 3) and their write-in response was classified as an invalid outpatient mental health treatment/counseling location or alternative treatment/support (AUOPYRS2=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73). In addition to the responses described above, respondents aged 12-17 and those coded as bad data, legitimate skip, don't know, refused, or blank (AUOPTYR=85, 89, 94, 97, 98, 99) were also defined as SAS missing. A respondent was assigned a positive response if they indicated they had received outpatient mental health treatment/counseling in the past year (AUOPTYR=1, 3) and they did not indicate an alternative source or invalid outpatient location (AUOPYRS2 not=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73) as their only location for outpatient treatment.

RECODED ADULT MENTAL HEALTH TREATMENT

The following variable, AMHSV TYP, classifies what type of mental health treatment/counseling was received in the past year. Respondents who reported receiving treatment for mental health were classified in one of seven mutually exclusive categories. A respondent was assigned to level one if they reported receiving inpatient treatment only (AMHINP2=1 and AMHOUTP3=2 and AMHRX2=2), to level two if they reported receiving outpatient treatment only (AMHINP2=2 and AMHOUTP3=1 and AMHRX2=2), to level three if they reported receiving prescription medication treatment only (AMHINP2=2 and AMHOUTP3=2 and AMHRX2=1), to level four if they reported receiving both inpatient and outpatient treatment only (AMHINP2=1 and AMHOUTP3=1 and AMHRX2=2), to level five if they reported receiving inpatient and prescription medication treatment only (AMHINP2=1 and AMHOUTP3=2 and AMHRX2=1), to level six if they reported receiving outpatient and prescription medication treatment only (AMHINP2=2 and AMHOUTP3=1 and AMHRX2=1), or to level seven if they reported receiving inpatient, outpatient, and prescription medication treatment (AMHINP2=1 and AMHOUTP3=1 and AMHRX2=1). Respondents who did not receive mental health treatment in the past year were assigned to level eight (AMHINP2=2 and AMHOUTP3=2 and AMHRX2=2). Respondents whose specific treatment was not distinguishable due to missing values in one or more of the three source variables (AMHINP2, AMHOUTP3, or AMHRX2) were assigned a SAS missing.

NOTE: The following seven variables contain information about the location of outpatient mental health treatment/counseling received in the past year. A respondent must have reported having received outpatient mental health treatment in the past year (AMHOUTP3=1) in order to be asked the questions on the location where treatment was received. A respondent was allowed to report any of five specific locations or "Some Other Place". If a respondent reported "Some Other Place," they were asked to provide a description of the other location in a follow-up question. The first five variables below were created by examination of the variables containing information on the five specific locations, while the last two variables were created by examination of the variables containing information on the other-specific locations which were grouped into two main categories.

NOTE: The following seven variables contain information about the location of outpatient mental health treatment/counseling received in the past year. These variables were revised for the 2009 NSDUH to include those respondents who reported receiving NO outpatient mental health treatment (AMHOUTP3=2) in the No category for the location. This differs from the variables named similarly in the past as they were only defined for those respondents who reported having received outpatient mental health treatment in the past year (AMHOUTP3=1) and those respondents who reported No outpatient mental health treatment were previously defined as SAS missing.

Only respondents who reported having received outpatient mental health treatment/counseling (AMHOUTP3=1) can be defined as having received it at the location. A respondent was allowed to report any of five specific locations or "Some Other Place". If a respondent reported "Some Other Place," they were asked to provide a description of the other location in a follow-up question. The first five variables below were created by examination of the variables containing information on the five specific locations, while the last two variables were created by examination of the variables containing information on the other-specify locations which were grouped into two main categories.

RECODED ADULT MENTAL HEALTH TREATMENT

NOTE: The following 15 variables contain information about the reasons for not receiving mental health treatment/counseling that was needed in the past year. A respondent must have reported not receiving mental health treatment that was needed in the past year (AMHTXND2=1) in order to be asked the questions on the reason for not receiving treatment. A respondent was allowed to report any of eight specific reasons or "Some Other Reason." If a respondent reported "Some Other Reason," they were allowed to report any of six additional specific reasons or report "Some Other Reason" again. If a respondent reported "Some Other Reason" again, they were then asked to provide the most important other reason in a follow-up question. The first 14 variables below were created by examination of the variables containing information on the fourteen specific reasons; while the last variable was created by examination of the most important other-specify reasons.

The next questions are about what it's like to live in your neighborhood. By neighborhood, we mean the area around where you live and around your house. It may include places you shop, religious or public institutions, or a local business district. It is the general area around your house where you might perform routine tasks, such as shopping, going to the park, or visiting with neighbors.

The following statements are about things that people in your neighborhood may or may not do. For each of these statements, please tell me whether you strongly agree, agree, disagree, or strongly disagree.

The following variable, TALKPROB, was created from the variables containing information on who youths would talk with about serious problems: No one (YETLKNON), parent/guardian (YETLKPAR), boyfriend/girlfriend (YETLKBGF), other adults (YETLKOTA), or some other person (YETLKSOP). Youths who did not report a positive response to at least one of the source variables (no source variables=1), or youths who reported both being able to talk with no one (YETLKNON=11) and being able to talk to someone (YETLKPAR, YETLKBGF, YETLKOTA, or YETLKSOP=11), or respondents over the age of 17 (all source variables=99) were coded as SAS missing.

The following variable, YTHACT2, was created by counting the number of positive responses reported over the following four youth activity questions: School-based (YESCHACT), community-based (YECOMACT), church or faith-based (YEFIACT), or other activities (YEOTHACT). Youth respondents who reported participation in two or more activities were included in the "2 or More Activities" category regardless of how many other activity questions were answered. Youth respondents who did not answer two or more of the four youth activity questions with a "yes" or "no" response were coded as SAS missing. To be included in the "None or 1 Activity" category, a youth respondent must have answered two or more of the activity questions and reported they participated in either zero or one activity.

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

NOTE: The variable ADLTSAMP reflects the split-sample design in the 2004 NSDUH for respondents aged 18 or older. Adults in Sample A received all relevant questions in the Adult Mental Health module. Adults in Sample B received only the questions corresponding to the edited variables DSTNRVOS, DSTHOPLS, DSTRSTLS, DSTCHEER, DSTEFFRT, and DSTNGOOD. Remaining variables in the Adult Mental Health module were assigned legitimate skip codes for adults in Sample B.

Questions corresponding to these variables were adapted from a subset of questions in the World Health Organization Disability Assessment Schedule (WHODAS), which consists of questions that are used for assessing impairment in social adjustment and behavior.

Since 2010, an alternate score was given to the source variable (WHODAS) for respondents whose answers to questions corresponding to the distress measures DSTNRV30 through DSTNGD12 were all missing. RECODED MENTAL HEALTH

RECODED MENTAL HEALTH

NOTE: The variables in this section are recoded variables that were created from one or more variables from the following two sections: Mental Health and Recoded Substance Dependence and Abuse.

Recoded variables were defined to measure psychological distress, Serious Mental Illness (SMI) and other levels of mental illness, as well as suicide ideation. A logistic regression model revised in 2012 is used to determine the predicted probability of SMI. The predicted mental illness variables (e.g., SMIYR_U, AMIYR_U) that were derived from the 2012 model were examined to determine how they were associated with the mental health predictor variables in the 2012 model. It was found that the 2012 model significantly overestimated the proportion of adults aged 18 or older with SMI (and those with AMI) who had suicidal thoughts in the past year and also the proportion of adults who had MDE in the past year. Therefore, it is recommended that the mental illness variables derived from the 2012 model should not be used when analyzing past year suicidal thoughts, past year MDE, or other associated variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, or lifetime MDE). Similarly, it is recommended that model-based mental illness variables should not be used in conjunction with the K6 variables (including serious psychological distress) or WHODAS variables in any analyses. Specific details about the creation and use of the distress and mental illness variables can be found in the Recoded Mental Health Module Variable Documentation Appendix.

NOTE: The following five variables contain information about psychological distress. The 2008 NSDUH was the first survey year where variables on past month psychological distress (K6SCMON and SPDMON) were available and these variables were used beginning with the 2008 Detailed Tables. A second set of variables describes past year psychological distress (K6SCYR, K6SCMAX, and SPDYR). The past year distress variables, K6SCMAX and SPDYR, were created based on data from the past month K6 items and the worst month in the past year K6 items. Prior to the 2008 NSDUH, past year distress was based only on the worst month in the past year K6 items (SPD_UADJ). Due to the addition of the past month K6 items, it was determined that past year SPD in 2008 and later years is not comparable with years prior to 2008. In order to be able to make comparisons of SPD estimates across years, statistically adjusted variables were created for 2005-2007. The 2005-2007 adjusted past year SPD recodes, K6SMXADJ and SPDYRADJ, can be renamed to the 2008 SPD variable names for use in analyses that use data from the years 2005-2012.

The following variable, K6SCMON, is a score with values ranging from 0 to 24 indicating the level of psychological distress over the past 30 days (past month). This variable is based on data collected from a series of six questions known as the K6, asking adult respondents how frequently they experienced symptoms of psychological distress during the past 30 days. These questions include the following symptoms of distress: feeling nervous (DSTNRV30), feeling hopeless (DSTHOP30), feeling restless or fidgety (DSTRST30), feeling so sad or depressed that nothing could cheer you up (DSTCHR30), feeling that everything was an effort (DSTEFF30), and feeling down on yourself, no good, or worthless (DSTNGD30). For each of the six items listed above, responses of "all of the time" were coded 4, "most of the time" were coded 3, "some of the time" were coded 2, "a little of the time" were coded 1, and "none of the time" and all other responses were coded 0. These assigned values were summed across the six items to calculate a total score for K6SCMON. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

RECODED MENTAL HEALTH

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from the following two sections: Adult Mental Health or Recoded Substance Dependence and Abuse.

NOTE: This section contains 2 sets of SPD recoded variables. The first set (SPD_USCR and SPD_UADJ) is based only on the K6 questions in the 2005 questionnaire. The second set (K6SMXADJ and SPDYRADJ) is also based on the K6 questions but is statistically adjusted to be comparable with the past year SPD recoded variables in 2008 and later NSDUHs.

NOTE: In the 2005 NSDUH, all respondents aged 18 or older were administered the "short form" Adult Mental Health module. The "short form" module included only questions that make up the K6 scale. The following recoded serious psychological distress variables, SPD_USCR and SPD_UADJ, were defined based on data collected from a series of six questions asking respondents how frequently they experienced symptoms of psychological distress during the one month in the past year when they were at their worst emotionally. These questions are known as the K6 and include the following symptoms of distress: feeling nervous (DSTNRVOS), feeling hopeless (DSTHOPLS), feeling restless or fidgety (DSTRSTLS), feeling so sad or depressed that nothing could cheer you up (DSTCHEER), feeling everything was an effort (DSTEFFRT), and feeling no good or worthless (DSTNGOOD). In the 2005 Detailed Tables, the 2005 SPD estimates were generated using the unadjusted SPD variable (SPD_UADJ) weighted by ANALWT_C. These 2005 SPD estimates are comparable with 2004 SPD estimates for respondents in 2004 sample B only (ADLTSAMP=2) weighted by SPDWT_C. SPDWT_C essentially weights the adult half-sample up to generate estimates similar in magnitude to those for the entire adult sample. Specific details about the variables, SPD_USCR and SPD_UADJ, and more information on how to compare the 2005 SPD variables with SPD variables from other NSDUH years (including weighting information) are provided in the Recoded Adult Mental Health: Serious Psychological Distress Variable Documentation Appendix.

The variable, SPD_USCR, is a score from 0 to 24 indicating the level of serious psychological distress (SPD). For adults, this score was calculated by assigning a value of 0 to 4 to each reported response regarding the frequency a respondent experienced symptoms of psychological distress (see above). Subsequently these assigned values were summed to calculate a total score.

NOTE: The two variables directly above are defined based on questions asking about a respondent's level of psychological distress over the past 30 days. Respondents were then asked if there was a month in the past 12 months when they felt more depressed, anxious, or emotionally stressed than they felt in the past 30 days. This level of psychological distress is referenced as the "worst month in past year" in the following documentation.

The following variable, K6SCYR, is a score with values ranging from 0 to 24 indicating the level of psychological distress during the worst month of the past year, that was not the past 30 days. This variable is only defined for respondents who reported that there was a month in the past 12 months when he/she was more depressed, anxious, or emotionally stressed than during the past 30 days (DSTWORST=1). This score variable is based on a series of six questions asking respondents how frequently they experienced symptoms of psychological distress during their worst month in the past year (only if the worst month was not the past 30 days). These questions are from the K6 and include the following symptoms of distress: feeling nervous (DSTNRV12), feeling hopeless (DSTHOP12), feeling restless or fidgety (DSTRST12), feeling so sad or depressed that nothing could cheer you up (DSTCHR12), feeling that everything was an effort (DSTEFF12), and feeling down on yourself, no good, or worthless (DSTNGD12). For each of the six items listed above, responses of "all of the time" were coded 4, "most of the time" were coded 3, "some of the time" were coded 2, "a little of the time" were coded 1, and "none of the time" and all other responses were coded 0. These assigned values were summed across the six items to calculate a total score for K6SCYR. For respondents who indicated that they did not have a month in the past year worse than the past 30 days, K6SCYR was set to missing. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

RECODED MENTAL HEALTH

NOTE: The following two variables were created using statistical adjustments to allow comparisons with past year SPD variables (K6SCMAX and SPDYR) which are available starting in the 2008 NSDUH. In 2008, K6 questions for the past 30 day reference period were added to the mental health module (referred to as the psychological distress module in 2007). This change prevented comparisons with past year SPD variables between 2004-2007 and 2008 and subsequent years. In order to compare the 2008 SPD variables with the 2005-2007 SPD variables, adjusted versions of the past year K6 total score (K6SMXADJ) and past year SPD (SPDYRADJ) were created. Adjusted variables were not created for 2004. The adjusted past year K6 total scores were used to classify respondents as having past year SPD, using the same cut point as the unadjusted variables. The 2005-2007 adjusted past year SPD variables K6SMXADJ and SPDYRADJ can be renamed to the 2008 and later SPD variable names, i.e., K6SCMAX and SPDYR, in order to make comparisons across years. The adjusted variables were first used to produce past year SPD estimates in the 2010 mental health detailed tables. Additional information on the adjustment that was applied can be found in the Recoded Serious Psychological Distress Variable Documentation Appendix.

NOTE: The following recoded serious psychological distress variables, SPD_ASCR and SPD_ADJ, were created similar to variables SPD_USCR and SPD_UADJ. The only difference is that these variables contain a statistical adjustment in which the 2004 sample B "short-form" scores were transformed to match the distributional characteristics of the 2004 sample A "long-form" scores using the cumulative distribution function (CDF) adjustment method. These adjusted variables were developed specifically to allow analyses of the entire 2004 sample of respondents aged 18 and older with 2003 and earlier NSDUHs weighted by ANALWT_C. These variables were not used in the 2004 Detailed Tables. These variables were used for exploratory analyses and producing state level SPD estimates using combined year data from 2004 and earlier NSDUHs. Specific details about the development and use of the SPD variables are provided in the note above SPD_USCR and the Recoded Adult Mental Health: Serious Psychological Distress Variable Documentation Appendix.

NOTE: The following recoded serious psychological distress variables, SPD_RSCR and SPD_RADJ, were created similarly to variables SPD_ASCR and SPD_ADJ. A different adjustment was implemented in which the 2004 sample A "long-form" scores were transformed to match the distributional characteristics of the 2004 sample B "short-form" scores using the cumulative distribution function (CDF) adjustment method. These reverse adjusted variables were developed specifically to allow analyses of the entire 2004 sample of respondents aged 18 or older with 2005 and subsequent NSDUHs weighted by ANALWT_C. These variables were not used in the 2004 Detailed Tables. These variables were used to produce state level estimates for SPD using combined year data from 2004 and subsequent NSDUHs. Specific details about the development and use of the SPD variables are provided in the note above SPD_USCR and the Recoded Adult Mental Health: Serious Psychological Distress Variable Documentation Appendix.

RECODED MENTAL HEALTH

NOTE: The following 10 variables pertain to the creation of the variables on mental illness. These variables include total scores from the psychological distress and impairment scales, the predicted probability of serious mental illness (SMI), and indicators of various levels of mental illness. Until 2012, a model developed for the 2008 NSDUH was used to determine mental illness status. A revised and improved model predicting mental illness was used starting with the 2012 NSDUH. All mental illness estimates presented in detailed or mental health detailed tables from the 2008 NSDUH and onward have been updated; thus, these estimates are based on the revised model. Additional details about the creation and use of these variables are provided in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, WSPDSC2, is an alternative version of the original worst K6 total score in the past year (K6SCMAX) with values ranging from 0 to 17 rather than 0 to 24. The original total score variable is documented previously in this section with the psychological distress variables. This alternative total score was calculated by assigning a value of 0 when K6SCMAX had a value from 0 to 7 and assigning a value of 1 to 17 when K6SCMAX had a corresponding value from 8 to 24. This alternative version was used in the regression model to determine SMI because SMI prevalence was typically extremely low for respondents with worst K6 total scores less than 8. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

WSPDSC2	Len : 2 RC-ALTERNATIVE WORST K6 TOTAL SCORE	Freq	Pct
	RANGE = 0 - 17.....	313788	40.24
	. = Aged 12-17 (AGE2<7)	135111	17.33
	-9 = Data not collected for this year.....	330900	42.43

NOTE: The following two variables, WHODASC2 and WHODASC3, are score variables that indicate the level of impairment for respondents. These variables are based on data collected from a series of thirteen questions asking respondents how much difficulty they experienced in doing eight daily activities in the one month in the past year when they were at their worst emotionally. These questions, drawn from the World Health Organization Disability Assessment Schedule (WHODAS), comprise an abbreviated scale which is used to capture information on impairment (see the Recoded Mental Health Module Variable Documentation Appendix for more information). Respondents who had indicated during the administration of any of the K6 items that they had experienced at least one of the K6 symptoms (defined in the note above variables K6SCMON and K6SCYR) at least "a little of the time" (i.e., K6SCMON greater than 0 or K6SCYR greater than 0) were asked about remembering to do things they needed to do (IMPREMEM), concentrating on doing something important when other things were going on around them (IMPCONCN), going out of the house and getting around on their own (IMPGOUT, IMPGOUTM), dealing with people they did not know well (IMPPEOP, IMPPEOPM), participating in social activities (IMPSOC, IMPSOCM), taking care of household responsibilities (IMPHHLD, IMPHHLDM), taking care of daily responsibilities at work or school (IMPRES, IMPRESM), and getting daily work done as quickly as needed (IMPWORK, IMPRESM). Respondents who reported that they did not engage in an activity were asked a follow-up question to determine if they did not do so because of emotions, nerves, or mental health.

For the original WHODAS total score, WHODASC2, a value of 3 was assigned for each of the daily activities that a respondent indicated having "severe" difficulty performing, or if the respondent indicated not performing the activity due to problems with emotions, nerves, or mental health. A value of 2 was assigned for each of the daily activities that a respondent indicated having "moderate" difficulty performing, and a value of 1 was assigned for "mild" difficulty. For activities that had a follow-up question, a response of "yes" were assigned a value of a 3 as having "severe difficulty." A value of 0 was assigned for all other responses and nonresponses for each activity. These assigned values were summed to calculate a total score for WHODASC2 which ranges from 0 to 24.

For the alternative WHODAS total score, WHODASC3, a value of 1 was assigned for each of the daily activities that a respondent indicated having "moderate" or "severe" difficulty performing, or if the respondent indicated not performing the activity due to problems with emotions, nerves, or mental health. For activities that had a follow-up question, a response of "yes" were assigned a value of a 1 as having "moderate or severe difficulty." A value of 0 was assigned for all other responses and nonresponses for each activity. These assigned values were summed to calculate a total score for WHODASC3 which ranges from 0 to 8. The alternative version of the WHODAS total score (WHODASC3) was used in the regression model to determine SMI, since it was thought that the sum of a dichotomous measure might fit better than the sum of a linear continuous measure.

Specific details about these variables are provided in the Recoded Mental Health Module Variable Documentation Appendix.

RECODED MENTAL HEALTH

Note: The following variable, SMIPP, is a predicted probability that a respondent has Serious Mental Illness (SMI) estimated using the 2008 logistic regression model. It was created using the following formula: $SMIPP = 1/(1 + \exp[-(-4.74999920 + 0.20977232*WSPDSC2 + 0.38388395*WHODASC3)])$. This measure based on the 2008 model is not comparable with the measure (SMIPP_U) based on the 2012 model defined above. Mental illness variables based on the 2008 model are no longer recommended for use in the estimation of mental illness. Thus, SMIPP is not being provided for estimation purposes but for possible methodological investigative purposes. For more information on how to use SMIPP from the 2008 model to create mental illness variables and additional information on how to use the 2008 model measures, see Appendix B, Section B.4.3, in the 2009 mental health findings report.

NOTE: The following two variables, SDSSC2 and SDSSC3, are score variables that indicate the level of impairment for respondents in sample B (MHSAMP08=2). These variables are based on a series of four questions asking respondents in sample B how much emotions, nerves, or mental health interfered with daily activities in the one month in the past year when they were at their worst emotionally. These questions are known as the Sheehan Disability Scale (SDS) which is also used to capture information on impairment. Respondents in sample B who had indicated during the administration of any of the K6 items that they had experienced at least one of the K6 symptoms (defined in the note above variables K6SCMON and K6SCYR) at least "a little of the time" (i.e., K6SCMON >0 or K6SCYR >0) were asked about ability to do home management tasks (MHSMGT), ability to work (MHSWORK), ability to form and maintain close relationships (MHSRELS), and ability to have a social life (MHSSOC).

For the original SDS total score, SDSSC2, values of 1 to 10 were assigned for each daily activity that a respondent indicated some impairment with values of 1 to 3 representing "mild" interference, values of 4 to 6 representing "moderate" interference, values of 7 to 9 representing "severe" interference, and a value of 10 representing "very severe" interference. A value of 0 was assigned for each daily activity that a respondent indicated no interference or for all other responses. These assigned values were summed to calculate a total score for SDSSC2 which ranges from 0 to 40.

For the alternative SDS total score, SDSSC3, a value of 1 was assigned for each daily activity that a respondent indicated impairment with values of 7 to 10 representing "severe" or "very severe" interference. A value of 0 was assigned for each daily activity that a respondent indicated impairment with values less than 7 or for all other responses. These assigned values were summed to calculate a total score for SDSSC3 which ranges from 0 to 4. The alternative version of the SDS total score also was driven by the idea that a dichotomous measure dividing respondents who experienced severe or very severe interference from the remaining respondents might fit better than a linear continuous measure.

Specific details about these variables are provided in the Recoded Mental Health Variable Documentation Appendix.

RECODED MENTAL HEALTH

NOTE: The following 11 mental illness variables are based on the 2012 mental illness prediction model. These variables are not comparable with similarly named variables (based on the 2008 mental illness prediction model) in previous NSDUHs; thus, these variables were renamed by appending "_U" to the previous variable names. Starting with the 2014 NSDUH, new mental illness variable names end only with a "U" and there are no existing similarly named 2008 model based variables. Recommendations concerning the analysis of the mental illness variables derived from the predicted probability of SMI (SMIPP_U) are noted in the documentation above SMIYR_U. Variables based on the 2008 mental illness prediction model are not being provided for the 2012 and future NSDUHs. All the 2008 model-based mental illness variables typically found in this section have been removed from the 2008-2011 NSDUH data files and replaced with the revised 2012 model based mental illness variables. The only exception is SMIPP (the SMI predicted probability based on the 2008 model) which remains available on the 2008-2011 NSDUH data files. Specific details about these variables and the prediction models are provided in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, SMIPP_U, is a predicted probability that a respondent has Serious Mental Illness (SMI) estimated using the 2012 revised logistic regression model. SMIPP_U was used to determine these levels of mental illness: Serious (SMI), Serious or Moderate (SMMI), and Any (AMI). The categories of Moderate (MMI) and Mild (LMI) were determined by subtraction.

NOTE: The following six variables (SMIYR_U, AMIYR_U, SMMIYR_U, MMIYR_U, LMIYR_U, and LMMIYRU) are not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, K6, or the WHODAS, nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, SPD, or components used in the K6 or WHODAS scales). Specific details about the creation and use of these variables can be found in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, SMIYR_U, is a Serious Mental Illness (SMI) indicator for respondents based on the 2012 revised predicted probability of SMI (SMIPP_U). If SMIPP_U is greater than or equal to a specified cutoff point (0.260573529) then SMIYR_U=1, and if SMIPP_U is less than the cutoff point then SMIYR_U=0. This indicator is not comparable with SMI variables prior to 2008, in which SMI was only based on psychological distress. Also, this indicator based on the 2012 model is not comparable with the indicator based on the 2008 model. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, AMIYR_U, is an indicator for Any Mental Illness (AMI) based on the 2012 revised predicted probability of SMI (SMIPP_U). If SMIPP_U is greater than or equal to a specified cutoff point (0.0192519810) then AMIYR_U=1, and if SMIPP_U is less than the cutoff point then AMIYR_U=0. This indicator based on the 2012 model is not comparable with the indicator based on the 2008 model. AMI is defined as having Serious, Moderate, or Mild Mental Illness. NOTE: The following three variables are recodes that combine mental illness measures based on the 2012 revised predicted probability of SMI (SMIPP_U) with drug or alcohol dependence or abuse in the past year. These variables based on the 2012 mental illness prediction model are not comparable with similarly named variables from previous years using SMI based on the 2008 mental illness prediction model. Starting with the 2014 NSDUH, new combination recodes end only with a "U" and there are no existing similarly named 2008 model based variables. Please note that SMIDA2_U, AMIDA2_U, and LMMIADAU are not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, K6, or the WHODAS, nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, SPD, or components used in the K6 or WHODAS scales). Specific details about the creation and use of the mental illness variables used in these recodes can be found in the Recoded Mental Health Module Variable Documentation Appendix. Specific information about the dependence or abuse variables used in these recodes can be found in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

NOTE: All of the respondents aged 18 or older were asked the questions in the Adult Depression module in this current survey year. In the 2004 survey, a subset of the adults was asked these questions.

RECODED ADULT DEPRESSION

RECODED ADULT DEPRESSION

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: This section contains two versions of adult lifetime and past year major depressive episode (MDE) variables. The first version referred to as unadjusted variables (AMDELT and AMDEYR) should not be compared to lifetime and past year MDE variables from prior to 2008 due to questionnaire changes and only limited comparisons (for those cases where MHSAMP08=1 and using the appropriate weight variable (MHSAWT_C)) can be made with 2009 and later data. The unadjusted MDE variables were used to produce estimates for the 2008 detailed tables using the WHODAS subsample. The second version referred to as adjusted variables (AJAMDELT and AJAMDEYR) was developed to allow comparisons across years beginning with 2005. Adjusted variables were not created for 2004. Specific details about both versions can be found in the Recoded Depression Variable Documentation Appendix.

The youth depression estimates were not impacted by the 2008 questionnaire changes and are comparable between all years despite the variable name change (see the Recoded Adolescent Depression section).

The following variable, AMDELT, classifies an adult as having a major depressive episode (MDE) in their lifetime (AMDELT=1) if they reported experiencing at least 5 out of the 9 criteria used to define an adult as having had MDE in their lifetime (ADSMMDEA=1).

An adult was classified as NOT having a major depressive episode (MDE) in their lifetime (AMDELT=2) if they met either of these conditions:

(1) Reported experiencing fewer than 5 out of the 9 criteria used to define an adult as having had MDE in their lifetime (ADSMMDEA=2)

(2) If the number of criteria used to define an adult as having had MDE in their lifetime is (ADSMMDEA=98) and reported at least one following:

(I) Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (ADDPREV=2), discouraged about how things were going in life (ADDSCEV=2), and lost interest in most things usually enjoyable (ADLOSEV=2).

(II) Never having had a period of time when being sad, discouraged, or having lost interest in most things usually enjoyable lasting nearly every day for two weeks or longer (ADLSI2WK=2) or (ADDP2WK=2).

(III) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoyable lasted nearly every day for two weeks or longer and the sadness, discouragement, or loss of interest lasted less than an hour when mood was most severe and frequent (ADWRHRS=1).

(IV) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoyable lasted nearly every day for two weeks or longer and during those times when mood was most severe and frequent, emotional distress was mild (ADWRDST=1), there was never a time when emotional distress was so severe that you could not be cheered up (ADWRCHR=4), and there was never a time when your emotional distress was so severe that you could not carry out your daily activities (ADWRIMP=4).

(V) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoyable lasted nearly every day for two weeks or longer and never had any other problems during those weeks, such as changes in sleep, appetite, energy, the ability to concentrate and remember, or feelings of low self-worth (ADPPROB=2).

The following adult MDE variable, AMDEY2_U, is used in the 2012 mental illness prediction model. It is defined differently than AMDEYR which is used in the Mental Health Detailed Tables. See the mental illness variables in the Recoded Mental Health section of this codebook and the Recoded Mental Health Module Variable Documentation Appendix for more details on the 2012 mental illness prediction model.

To produce estimates among adults with MDE, the analysis will need to be restricted by either the lifetime MDE variable (AMDELT) or the past year MDE variable (AMDEYR).

NOTE: The adjusted adult MDE variables (AJAMDELT and AJAMDEYR) were created using a weighted logistic regression model to compute predicted probabilities of past year MDE for each respondent. The predicted probabilities, which can have any value between 0 and 1, then were dichotomized such that each respondent was specified as having or not having MDE in the past year.

These variables can be renamed to match the 2009 and later year adult MDE variables (AMDELT and AMDEYR) in order to make comparisons across years. No weight adjustments are needed when using the adjusted MDE variables. The adjusted MDE variables were first used to produce lifetime and past year adult MDE estimates in the 2010 mental health detailed tables. For more information on the creation of the adjusted adult depression variables, see the Recoded Depression Variable Documentation Appendix.

The following adult adjusted MDE variable, AJAMDE_U, is used in the 2012 mental illness prediction model. It is defined differently than AJAMDEYR which is used in the Detailed Tables. See the mental illness variables in the Recoded Mental Health section of this codebook and the Recoded Mental Health Module Variable Documentation Appendix for more details on the 2012 mental illness prediction model.

The following variable, AOTHMDE, defines an adult as having seen or talked to another professional about MDE during the past year if s/he entered a valid write-in response other than the responses that matched existing categories.

An adult was classified as NOT having seen or talked to another professional about MDE during the past year, AOTHMDE=0, if s/he met either of these conditions:

1. Reported NOT seeing or talking to a medical doctor or other professional during the past year (ADSEEDOC=2).
2. Response not entered for whether other mental health professional was seen or talked to during the past year (ADOTHHLP=6).
3. Write-in response entered matched an existing category.

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section. Specific details about the recoded variables are provided in the Recoded Depression Variable Documentation Appendix.

NOTE: The following five variables in this section are based on questions asked of all applicable respondents regardless of whether they were ultimately classified as having a Major Depressive Episode (MDE) in their lifetime or not. If you would like estimates among persons with MDE, you will need to restrict your analysis by either the lifetime MDE variable (MDEL) or the past year MDE variable (MDEYR).

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The following recoded variables contain information about whether youths received mental health care in the past year from each of 11 specific services for problems with behaviors or emotions that were not caused by alcohol or drugs.

The following variable, ANYTRT10, indicates whether a youth reported receiving treatment/counseling in the past year from any of 10 specific sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created by counting the number of positive responses (source variables=1), and the number of questions answered (source variables=1,2,4) to the following 10 source of treatment questions: hospital (YUHOSPYR), residential treatment facility (YURSIDYR), foster care (YUFCARYR), day treatment facility (YUDYTXYR), mental health clinic (YUMHCRYR), private therapist (YUTPSTYR), in-home therapist (YUIHTPYR), family doctor (YUFDOCYR), through special education (YUSPEDYR), and school counselor (YUSHCNYR). Youths who reported a positive response to one or more of the 10 questions were included in the yes category regardless of how many of the 10 questions they answered. Youths who did not report a positive response, but answered 5 or more of the 10 questions were included in the no category. Youths who did not report a positive response, but answered fewer than 5 of the 10 questions, and adults were included in the unknown category.

RECODED YOUTH MENTAL HEALTH TREATMENT

NOTE: The following eight variables contain information on the general types of mental health services received by youths in the past year for problems with behavior or emotions that were not caused by alcohol or drugs.

The following variable, ANYMHIN, indicates whether a youth reported receiving specialty inpatient/residential mental health services in the past year from any of 3 specific inpatient/residential sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following 3 sources of treatment variables: stayed overnight in hospital (YHOSP), stayed in residential treatment facility (YRESID), and spent time in foster care (YFOST). Youths who reported a positive response (source variable=1) to one or more of the 3 questions were included in the yes category regardless of how many of the 3 questions they answered. Youths who did not report a positive response, but answered all 3 of the questions were included in the no category. Youths who did not report a positive response and did not answer all the questions, and adults were included in the unknown/18+ category.

The following variable, ANYMHIN2, indicates whether a youth reported receiving specialty inpatient/residential mental health services in the past year from any of two specific inpatient/residential sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following two sources of treatment variables: stayed overnight in hospital (YHOSP) and stayed in residential treatment facility (YRESID). Youths who reported a positive response (source variable=1) to either question were included in the yes category. Youths who did not report a positive response, but answered both questions were included in the no category. The following variable, ANYTRT9, indicates whether a youth reported receiving treatment/counseling in the past year from any of 9 specific sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created by counting the number of positive responses (source variables=1), and the number of questions answered (source variables=1,2,4) to the following 9 source of treatment questions: hospital (YUHOSPYR), residential treatment facility (YURSIDYR), foster care (YUFCARYR), day treatment facility (YUDYTXYR), mental health clinic (YUMHCRYR), private therapist (YUTPSTYR), in-home therapist (YUIHTPYR), family doctor (YUFDOCYR), and school counselor (YUSHCNYR). This variable was created in the same manner as ANYTRT10 (see above), except that the source of treatment question about special education (YUSPEDYR) was not included as a source variable. This variable was omitted because CAI did not include a follow-up question about the reasons for receiving mental health treatment at this source of treatment. Youths who reported a positive response to one or more of the 9 questions were included in the yes category regardless of how many of the 9 questions they answered. Youths who did not report a positive response, but answered 5 or more of the 9 questions were included in the no category. The following variable, ANYMHOUT, indicates whether a youth reported receiving specialty outpatient mental health services in the past year from any of 4 specific outpatient sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following 4 source of treatment variables: spent time in a day treatment facility (YDAYTRT), received treatment at a mental health clinic (YCLIN), from a private therapist (YTHER), and from an in-home therapist (YHOME). Youths who reported a positive response (source variable=1) to one or more of the 4 questions were included in the yes category regardless of how many of the 4 questions they answered. Youths who did not report a positive response, but answered all 4 of the questions were included in the no category. The following variable, ANYSMH, indicates whether a youth reported receiving specialty mental health services in the past year from any of 7 specific inpatient/residential or outpatient specialty sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following 7 source of treatment variables: stayed overnight in a hospital (YHOSP), stayed in a residential treatment facility (YRESID), spent time in foster care (YFOST), spent time in a day treatment facility (YDAYTRT), received treatment from a mental health clinic (YCLIN), from a private therapist (YTHER), and from an in-home therapist (YHOME). Youths who reported a positive response (source variable=1) to one or more of the 7 questions were included in the yes category regardless of how many of the 7 questions they answered. Youths who did not report a positive response, but answered all 7 of the questions were included in the no category. Youths who did not report a positive response and did not answer all the questions, and adults were included in the unknown/18+ category.

The following variable, ANYMHED, indicates whether a youth enrolled in school reported receiving mental health services in the past year from education sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created using the following source of treatment variables: talked to school counselors, school psychologist, or regular teacher for problems (YSCHL) and received special education services in the classroom or placed in a special classroom, program, or school (YSPED). Youths who reported a positive response (source variable=1) to one or more of these questions were included in the yes category regardless of how many of the questions they answered. Youths who did not report a positive response, but answered both questions were included in the no category. Youths who did not report a positive response and did not answer both questions, and adults were included in the unknown/18+ category.

The following variable, ANYMHED2, indicates whether a youth enrolled in school reported receiving mental health services in the past year from education sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created using the following source of treatment variables: talked to school social worker, school psychologists, or school counselors for problems (YSHSW) and attended a special school or participated in a special program at a regular school for problems (YSPEC). Youths who reported a positive response (source variable=1) to one or more of these questions were included in the yes category regardless of how many of the questions they answered. Youths who did not report a positive response, but answered both questions were included in the no category. Youths who did not report a positive response and did not answer both questions, and adults were included in the unknown/18+ category. NOTE: For each reported source of treatment/counseling for problems with behavior or emotions that were not caused by alcohol or drugs (see ANYTRT9), the respondent was asked to report which of 5 specific reasons was the reason for the last time he/she received treatment from this source. In addition, the respondent could also answer "other". If a respondent reported "other", then he/she was asked to list the other reason (or reasons). A respondent was allowed to enter up to 5 additional reasons for treatment from each source. The 5 specific reasons were: thought about or tried suicide, felt depressed, felt afraid or tense, acting out or breaking rules, and eating problems. Multiple reasons could be reported for each source of treatment, thus the response categories are not mutually exclusive. For each of the 9 sources of treatment there are 5 variables that contain data about the 5 specific reasons for treatment, resulting in 45 variables that include data about the specific reasons. In addition, for each of the 9 sources there are 5 variables that contain data about the other specified reasons, resulting in 45 additional variables. The following recoded variables indicate the reasons youth reported for receiving treatment across all the reported sources of treatment in the past year. Note that these variables are only defined for youth who received treatment from one or more of the 9 sources and reported at least one reason for treatment.

The following variable, REASSUIC, indicates whether respondents received treatment/counseling from at least one source in the past year because they thought about or tried to kill themselves. Due to editing procedures, write-in other specify values were not used in this variable. RECODED YOUTH MENTAL HEALTH TREATMENT

NOTE: The following 13 variables contain the reasons that youths received their most recent mental health services from at least one inpatient/residential specialty mental health source for emotional or behavioral problems not caused by alcohol or drugs. These variables are not comparable to similar named variables found in previous NSDUHs due to the relocation of foster care into the nonspecialty treatment category instead of the specialty treatment category where it previously was included.

The following variable, SIMHSUI2, indicates whether a respondent received their most recent mental health services from at least one inpatient/residential specialty mental health source in the past year because they thought about or tried to kill themselves. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOSUIC) or residential treatment center (YURSSUIC) because of suicidal thoughts. None of the write-in other-specify values were applicable for this variable. Adults, youths that did not report receiving services from either of these inpatient/residential sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

The following variable, SPINVST, indicates how many overnight stays were reported at an inpatient/residential specialty mental health service in the past year. The number of overnight stays is calculated by adding the number of overnight stays at a hospital (YUHOSPN2), residential treatment center (YURSIDN2), and in foster care (YUFCARN2). A value of 6 (No Overnight Stays) was assigned whenever a respondent said they had used none of the services (YUHOSPYR, YURSIDYR, YUFCARYR all equal 2). A value of missing was assigned when the response to whether received treatment or number of overnight stays was unknown for any of the 3 locations (any of YUHOSPYR, YURSIDYR, YUFCARYR=85, 94, 97, 98 OR any of YUHOSPN2, YURSIDN2, YUFCARN2=985, 994, 997, 998), unless the sum of the overnight stays for services with non-missing information was greater than or equal to 25, in which case a value of 5 (25 or more stays) was assigned. A missing value was also assigned for respondents aged 18 or older.

The following variable, REASOTH, was assigned a positive response if a respondent reported some other reason for receiving mental health treatment in the past year other than the four reasons listed above. Since the reasons are not mutually exclusive, a respondent can report one or more of the four reasons in addition to the other reason. NOTE: The following 13 variables, SEMXXX, indicate whether a respondent last received any specialty mental health services along with services from either education or general medical (family doctor/pediatrician) settings in the past year because of respective reasons for problems with behavior or emotions that were not caused by alcohol or drugs. These recodes were created by examination of the following sources: received any specialty mental services (SMHXXX), received treatment from a family doctor or pediatrician (FDOCXXX), and talked to a school counselor, school psychologist, or regular teacher (SHCNXXX) in the past year because of respective reasons.

Respondents for the SEMXXX reason variables were treated as missing if 1) they were aged 18 or older 2) they did not receive care or it is unknown if they received care for any reason at any of the specialty mental health services (ANYSMH=0 or missing) or at both an education and general medical setting (YPED and YSCHL=0 or missing) or if 3) they did receive treatment at both of these services but did not indicate a valid reason for receiving services at a specialty mental health service along with services from either education or general medical setting, or there was not sufficient information to determine if these services were received for the specified reason. Respondents were categorized as not having received care for the specified reason if they were not categorized as missing and it could not be shown that they received care for the specified reason at a specialty mental health service along with services from either an education or general medical setting.

Note that responses for receipt of care for the specified reason are only taken into account for services received. For example, a respondent who indicated receiving both education and general medical services, and indicated that they did not receive care for the specified reason for education, but did not indicate any reason for medical will be assigned to the unknown category. However, if this respondent only indicated receiving education services then with the same responses to the reason questions, they would be assigned to the "No" category (assuming that they also did not receive care from any specialty services).

RECORDED YOUTH MENTAL HEALTH TREATMENT

NOTE: The following 13 variables, SEMXXX2, indicate whether a respondent last received any specialty mental health services along with services from either education or general medical (family doctor/pediatrician) settings in the past year because of respective reasons for problems with behavior or emotions that were not caused by alcohol or drugs. These recodes were created by examination of the following sources: received any specialty mental services (SMHXXX), received treatment from a family doctor or pediatrician (FDOCXXX), and talked to a school social worker, school psychologist, or school counselor (SHSWXXX) in the past year because of respective reasons.

Respondents for the SEMXXX2 reason variables were treated as missing if 1) they were aged 18 or older 2) they did not receive care or it is unknown if they received care for any reason at any of the specialty mental health services (ANYSMH=0 or missing) or at both an education and general medical setting (YPED and YSHSW=0 or missing) or if 3) they did receive treatment at both of these services but did not indicate a valid reason for receiving services at a specialty mental health service along with services from either education or general medical setting, or there was not sufficient information to determine if these services were received for the specified reason. Respondents were categorized as not having received care for the specified reason if they were not categorized as missing and it could not be shown that they received care for the specified reason at a specialty mental health service along with services from either an education or general medical setting.

Note that responses for receipt of care for the specified reason are only taken into account for services received. For example, a respondent who indicated receiving both education and general medical services, and indicated that they did not receive care for the specified reason for education, but did not indicate any reason for medical will be assigned to the unknown category. However, if this respondent only indicated receiving education services then with the same responses to the reason questions, they would be assigned to the "No" category (assuming that they also did not receive care from any specialty services). These variables are not comparable with variables named SEMXXX in previous NSDUHs due to questionnaire changes in the Youth Mental Health Utilization module.

RECODED ADOLESCENT DEPRESSION

RECODED ADOLESCENT DEPRESSION

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: Starting with the 2004 NSDUH, respondents were administered separate age-appropriate depression modules designed to measure whether or not respondents had experienced a major depressive episode (MDE) in their lifetime and past year. All adolescent (youth) respondents aged 12 to 17 were asked questions from the Youth Depression module. The 2004 NSDUH only asked a subsample of adults aged 18 or older the questions from the Adult Depression module, but starting in 2005, all adults were administered the questionnaire module.

From 2004 through 2007, a single set of variables was created containing the recoded MDE data for both adult and adolescent respondents combined. In 2008, instead of a single set of variables, two recoded sets of MDE variables were created for adolescents and adults separately. This change was due to the presence of context effects in the adult estimates stemming from changes in the mental health module which precedes the adult depression section within the questionnaire. Based on an analysis of the 2008 data that evaluated the presence of context effects, it was determined that the adult depression estimates in 2008 and later years are not comparable with years prior to 2008, and the variables were therefore renamed to indicate the lack of comparability. The youth depression estimates were not impacted by the 2008 adult questionnaire changes and are considered comparable across years. Therefore, only the youth depression variables that were previously defined for both adults and youth had to be renamed. Multi-year trend analyses can be performed by renaming the recoded adolescent depression variables the same across years. Youth depression variables that did not require renaming are noted specifically in the comments above the variables below. See the 2008 Recoded Mental Health Module Variable Documentation Appendix for more detailed information on the 2008 changes as well as the 2008 Recoded Depression Variable Documentation Appendix for example SAS code showing how to rename the variables for multi-year analyses.

In 2009, changes were made to the youth mental health service utilization (YMHSU) questions that preceded the adolescent depression questions. These changes included the replacement of five questions that asked about receipt of special education services and school counseling, and time spent in jail or foster care with questions that asked about receipt of mental health services in the education and justice system sectors. Due to this change, a context effect analysis was done using data from the first 6 months of the 2009 NSDUH and sought to determine whether changes in the YMHSU module affected responses to the first three adolescent depression questions and the lifetime and past year MDE estimates. The results of the analysis showed these changes in 2009 did not appear to affect the estimates of adolescent MDE; therefore, no further variable changes were needed.

Additional details on these adolescent depression recoded variables are provided in the Recoded Depression Variable Documentation Appendix.

The following variable, YMDEL1, classifies an adolescent as having a major depressive episode (MDE) in their lifetime, YMDEL1=1, if they reported experiencing at least 5 out of the 9 criteria used to define an adolescent as having had MDE in their lifetime, where at least one of the criteria is a depressed mood or loss of interest or pleasure in daily activities (YODSMMDE=1).

An adolescent was classified as NOT having a major depressive episode (MDE) in their lifetime, YMDEL1=2, if they met either of these conditions:

1. Reported experiencing fewer than 5 out of the 9 criteria used to define an adolescent as having had MDE in their lifetime (YODSMMDE=2).
2. If the number of criteria used to define an adolescent as having had MDE in their lifetime is unknown (YODSMMDE=98) and the respondent reported at least one of the following:
 - i. Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (YODPREV=2), discouraged or hopeless about how things were going in life (YODSCEV=2), and lost interest and became bored with most things usually enjoyable (YOLOSEV=2).
 - ii. Experienced the feelings in (i), but they did not last most of the day, almost every day for two weeks or longer [YOLSI2WK=2 or YODPR2WK=2].
 - iii. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer, but the feelings lasted less than an hour when mood was most severe and frequent (YOWRHR=1).
 - iv. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer for at least an hour during those times when mood was most severe and frequent, but the bad feelings were mild (YOWRDST=1), there was never a time when you felt so bad that nothing could cheer you up (YOWRCHR=4), and there was never a time when you felt so bad that you could not carry out your daily activities (YOWRIMP=4).
 - v. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer for at least an hour with bad feelings that were more than mild or at some point could not be cheered up or could not carry out daily activities, but never had any other problems during those weeks, such as changes in sleep, eating, energy, the ability to keep mind on things, or feeling badly about self (YODPPROB=2).

The following variable, YOTHMDE, defines an adolescent as having seen or talked to another professional about MDE during the past year, YOTHMDE=1, if s/he entered a valid write-in response other than the responses that matched the existing categories.

An adolescent was classified as NOT having seen or talked to another professional about MDE during the past year, YOTHMDE=0, if s/he met either of these conditions:

1. Reported NOT seeing or talking to a medical doctor or other professional during the past year (YOSEEDOC=2).
2. Response not entered for whether other mental health professional was seen or talked to during the past year (YOTHHLP=6).
3. Write-in response entered matched an existing category.

RECODED ADULT AND ADOLESCENT DEPRESSION

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from the Adult Depression and Adolescent Depression sections.

NOTE: This codebook contains two versions of adult lifetime and past year major depressive episode (MDE) variables. The unadjusted variables (MDELT and MDEYR), located in this section, are defined for both adult and adolescent respondents. Due to questionnaire changes in 2008 the unadjusted MDE variables for adults are only comparable with 2004 sample B (ADLTSAMP=2) and other years between 2005 and 2007. The adjusted variables (AJAMDELT and AJAMDEYR), included in the Recoded Adult Depression section, are only defined for adult respondents. These variables were developed to allow comparisons of adult MDE data across years beginning with 2005 and continuing through 2008 and later years. Adjusted variables were not created for 2004. Specific details about both versions can be found in the Recoded Depression Variable Documentation Appendix.

The unadjusted MDE variables were used in the 2007 detailed tables. Adjusted MDE variables (AJAMDELT and AJAMDEYR) were developed to allow comparisons across years beginning with 2005 (See the Recoded Adult Depression section). The adjusted variables were first used to produce lifetime and past year adult MDE estimates in the 2010 mental health detailed tables. For more information on the creation of the unadjusted adult depression variables see the Recoded Depression Variable Documentation Appendix.

A respondent was classified as having a major depressive episode (MDE) in their lifetime (MDELT=1) if they reported experiencing at least 5 out of the 9 criteria used to define an adult as having had MDE in their lifetime, where at least one of the criteria is a depressed mood or loss of interest or pleasure in daily activities (ADSMMDEA=1).

A respondent was classified as NOT having a major depressive episode (MDE) in their lifetime (MDELT=2) if they met either of these conditions:

(1) Reported experiencing fewer than 5 out of the 9 criteria used to define a person as having had MDE in their lifetime (ADSMMDEA=2 or YODSMMDE=2)

(2) If the number of criteria used to define a person as having had MDE in their lifetime is unknown (ADSMMDEA=98 or YODSMMDE=98) and reported at least one of the following:

(I) Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (ADDPREV=2 or YODPREV=2), discouraged about how things were going in life (ADDSCREV=2 or YODSCREV=2), and lost interest in most things usually enjoy (ADLOSEV=2 or YOLOSEV=2).

(II) Never having had a period of time when being sad, discouraged, or having lost interest in most things usually enjoy lasting nearly every day for two weeks or longer [(ADLSI2WK=2 or YOLSI2WK=2) and (ADDPR2WK=2 or YODPR2WK=2)].

(III) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoy lasted nearly every day for two weeks or longer and the sadness, discouragement, or loss of interest lasted less than an hour when mood was most severe and frequent (ADWRHRS=1 or YOWRHRS=1).

(IV) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoy lasted nearly every day for two weeks or longer and during those times when mood was most severe and frequent, emotional distress was mild (ADWRDST=1 or YOWRDST=1), there was never a time when emotional distress was so severe that you could not be cheered up (ADWRCHR=4 or YOWRCHR=4), and there was never a time when your emotional distress was so severe that you could not carry out your daily activities (ADWRIMP=4 or YOWRIMP=4).

(v) Having a period of time when being sad, discouraged, or having lost interest in most things usually enjoy lasted nearly every day for two weeks or longer and never had any other problems during those weeks, such as changes in sleep, appetite, energy, the ability to concentrate and remember, or feelings of low self-worth (ADPPROB=2 or YODPPROB=2).

The values in this section may be inconsistent with values for variables in other sections of the interview. Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in earlier sections. Otherwise, variables in one section of the interview generally were not edited to make them consistent with variables in another section of the interview. This note applies to variables in this section marked by a¹.

The next few questions return to the topic of alcohol. Remember that by a drink, we mean a can or bottle of beer, a glass of wine or a wine cooler, a shot of liquor, or a mixed drink with liquor in it. We are not asking about times when you only had a sip or two from a drink.

Earlier, the computer recorded that you drank at least one alcoholic beverage within the past 30 days, that is, since [DATEFILL].

Please think about the last time you drank any alcoholic beverage. How many drinks did you have that time?

NOTE: The distributions for CA4FDDYS, EI4FDDYS, CA4FDAGE, EI4FDAGE, CA4FDYFU, EI4FDYFU, CA4FDMFU, and EI4FDMFU for the 2006 survey are not comparable to the corresponding distributions in this survey year. A sizable number of female respondents in 2006 were incorrectly skipped out of the items corresponding to the variables CA4FDDYS and CA4FDAGE. In turn, the error for CA4FDAGE affected female respondents' eligibility to be asked the items corresponding to CA4FDYFU and CA4FDMFU. This error was corrected for the 2007 survey.

RECODED CONSUMPTION OF ALCOHOL

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

The following variable, DRKMTH, was created to capture the respondent's use of methamphetamine with his or her most recent use of alcohol. A positive response was assigned if the respondent reported methamphetamine use with his or her most recent alcohol use (CADRMTH=1, 5) and if he or she reported methamphetamine use in the core Stimulants module or he or she reported its use in the noncore Special Drugs module and they did not report methamphetamine use in the core Stimulants module because he or she did not consider it to be a prescription drug. A negative response was assigned if the respondent reported no methamphetamine use with his or her most recent alcohol use or reported never having used alcohol or methamphetamine or not having used in the past 30 days (CADRMTH=6,81,83,89,91,93,99). A negative response could also be assigned if a respondent reported methamphetamine use with his or her most recent alcohol use (CADRMTH=1,5) but he or she did not report ever having used methamphetamine in the core Stimulants module or in the noncore Specialty Drug module because they did not consider it to be a prescription drug.

The following variable, DRKSUM, was created to capture the use of any illicit drug with the respondent's most recent use of alcohol. It was created by examination of the following variables: DRKMRJ, DRKCOC, DRKHER, DRKHAL, DRKINH, DRKANL, DRKTRN, DRKSTM, DRKMTH, and DRKSED. A positive response was assigned if a respondent answered 'Yes' to any of the individual drug variables. A negative response was assigned if a respondent answered 'No' to all drug variables or the respondent was not a past month user of any illicit drugs (SUMMON=0). If neither of these was true, then DRKSUM was set to missing.

NOTE: Starting from 2003, the following variable, EDFAM18, replaced the variable IRFAM18 (the imputation-revised indicator for having family members in the household aged 18 or older). Prior to 2003, the edited proxy variables were created using IRFAM18. However in 2003, the procedures for creating the edited proxy variables changed due to changes in the proxy questions in the questionnaire. The new procedures required an edited form of this indicator.

NOTE: The variable INCSAMP reflects the split-sample design for the Income module. Respondents in Sample A received the same set of income questions as in the 2005 survey. Respondents in Sample B received a reduced set of income questions. However, edited variables continue to have the same names that they had in prior years. If a question corresponding to a given variable was not administered to respondents in Sample B, it was assigned a LEGITIMATE SKIP code.

The variable HLCALL99 also is a created "flag" variable that indicates when respondents were reported to be covered by Medicare, Medicaid, military health care, and private health insurance. This HLCALL99 variable is comparable to HLCALLFG in 1999, when these four types of health insurance were the only types of current coverage that were asked about in the interview.

IMPUTED INCOME AND INSURANCE

Starting in 2002, missing values in the variables describing the type of health insurance were imputed. In particular, missing values in the edited variables PRVHLTIN (private health insurance), MEDICARE, CAIDCHIP (Medicaid/children's state-assisted health insurance), CHAMPUS, and a modified version of HLTINNOS (other health insurance) were imputed. The overall health insurance variable was then created by combining the information from the detailed imputation- revised variables in the variable IRINSUR4. This differs from the method used in 1999-2001 where the edited health insurance variables were combined before imputation to create a recoded overall health insurance variable (INSUR3), the missing values of which were imputed in the variable IRINSUR3. As in previous years, missing values in PRVHLTIN were imputed. However, the name has changed (IRPINSUR in 1999-2001, IRPRVHLT in 2002) to reflect the fact that the imputation of missing values in PRVHLTIN was univariate from 1999-2001, and multivariate (with the other detailed variables) in 2002.

Only imputed variables are included since other variables do not provide any additional analytic utility. Users can differentiate between imputed and non-imputed values using the imputation indicators. Questions about income from the questionnaire are not reproduced since the variables below do not correspond exactly to those questions. The following variable, POVERTY2, indicates a person's family income relative to poverty thresholds. The U.S. Census Bureau assigns a poverty threshold for each combination of family size and number of children in the household. To be at 100% of the poverty threshold is equivalent to having a family income that is the same as the poverty threshold. A poverty level less than 100% indicates having a family income less than the poverty threshold and therefore defined by the Federal government as living in poverty. A poverty level greater than 100% indicates having a family income greater than the poverty threshold.

POVERTY2 was created for each individual based on their poverty threshold (determined by their age, family size, the number of children in the household, and total family income). Since NSDUH only collects categorical values of family income, for each level of income, the midpoint of each range was assigned as the effective family income. However, for the unbounded highest level of income, an effective family income of \$120,000 was assigned. Effective family income was divided by the poverty threshold and multiplied by 100 to show family income as a percentage of the federal poverty threshold. Respondents aged 18 to 22 currently living in a college dormitory (GQTYPE2='C') were set to SAS missing and do not have a valid value for this variable.

IMPUTED INCOME AND INSURANCE

The following variable, POVERTY3, indicates a person's family income relative to poverty thresholds. The U.S. Census Bureau assigns a poverty threshold for each combination of family size and number of children in the household. To be at 100% of the poverty threshold is equivalent to having a family income that is the same as the poverty threshold. A poverty level less than 100% indicates having a family income less than the poverty threshold and therefore defined by the Federal government as living in poverty. A poverty level greater than 100% indicates having a family income greater than the poverty threshold. The previously created variable POVERTY2, was created using the recoded version of family income that had a top-coded level of \$100,000 or more. Starting in 2015, the finer income questions were revised to expand the top level to include the responses \$100,000 - \$149,999 and \$150,000 or more. The variable POVERTY3 account for these additional income levels through the use of the finer family income variable. Despite these changes, POVERTY3 is considered comparable with POVERTY2.

POVERTY3 was created for each individual based on their poverty threshold (determined by their age, family size, the number of children in the household, and total family income). Since NSDUH only collects categorical values of family income, for each level of income, the midpoint of each range was assigned as the effective family income. The highest level of income, \$150,000 or more, was assigned a value of \$180,000. Prior to the questionnaire change in 2015 that expanded the top level of income categories, the highest level of income was \$100,000 or more and the assigned family income was \$120,000. Family income was divided by the poverty threshold and multiplied by 100 to show family income as a percentage of the federal poverty threshold. Respondents aged 18 to 22 currently living in a college dormitory (GQTYPE2='C') were set to system missing and do not have a valid value for this variable.

NOTE: After a respondent has entered his/her birthdate in the first part of the questionnaire, he/she has multiple opportunities to change his/her age in response to consistency checks throughout the questionnaire. It is therefore possible for the age recorded by the respondent at the beginning of the questionnaire to be different than the age at the end of the questionnaire. The final age variable is determined using these two constituent age variables, in addition to the age calculated from the raw birthdate and the final edited interview date, the age entered in the questionnaire roster (if it exists), and the pre-interview screener age.

NOTE: The school enrollment variable SCHENRL is analogous to the variable ENROLED from prior years. SCHENRL takes into account information from follow-up probes if respondents originally reported that they were not enrolled in school. Based on these probes, respondents were coded as yes (i.e., enrolled) if they were on break from school and intended to return to school once their break was over. SCHENRL was assigned a code of 11 if the respondent reported currently being enrolled but there was uncertainty about the respondent's school enrollment status.

The next questions are about school. Are you now attending or are you currently enrolled in school? By "school," we mean an elementary school, a junior high or middle school, a high school, or a college or university. Please include home schooling as well.

NOTE: The industry variable WRKIDST2 corresponds to the variable WRKINDU2 prior to 2003. The variable name was changed to reflect changes to the industry codes in the 2003 NSDUH. Because of changes in 2003, caution is advised in comparing data from WRKIDST2 with data in WRKINDU2 from prior years. Industry categories do not correspond exactly between the two variables. Even when the same broad industry categories appear in the two variables, the types of industries or the definitions of the specific industries within these broad categories may not be the same. EMPLOYMENT AND WORKPLACE

NOTE: The variable JBSTATR2 was created from questions that asked respondents whether they worked in the past week, whether they usually work 35 or more hours per week, and where relevant, reasons why they did not work in the past week. Respondents who did not know or refused to report whether they worked in the past week but indicated that they did not work in the past 12 months were classified in JBSTATR2 as not having a job. In addition, respondents who reported that they had no job but were looking for work were not classified as being in the labor force unless they reported making specific efforts to find work.

IMPUTED EMPLOYMENT AND WORKPLACE

IMPUTED EMPLOYMENT AND WORKPLACE

The following variable, EMPSTATY, was created to promote consistency across survey years. The similar variable EMPSTAT3 was created in 1999 and 2000; it could not be created in the survey years since 2001 because of changes to the questionnaire. (See the comment before JBSTATR2 for more details.) The levels of EMPSTATY are close to those in the Current Population Survey. The main difference is that EMPSTATY considers people who did not have a job last week and were not looking for a job all to be unemployed. In comparison, the CPS definition requires people who did not have a job last week and were not looking for a job to be waiting to be recalled to their old job, in order for them to be classified as unemployed.

The Census provides data for five types of American Indian areas (AIAs):

- Federally-recognized American Indian reservations (AIRs) and off-reservation trust land areas - areas that have been set aside by the U.S. for the use of American Indian tribes. The tribes have primary governmental authority over the AIRs and associated off-reservation trust lands. Federal AIRs may cross State and all other area boundaries.
- State-recognized American Indian Reservations (SAIRs) - reservations established by some State governments for tribes recognized by the State. The tribes may have governmental authority over the SAIRs. SAIRs must be defined within a single State but may cross county and other types of boundaries.
- Oklahoma tribal statistical areas (OTSAs) - areas intended to represent the former American Indian reservations that existed in Indian and Oklahoma territories prior to Oklahoma statehood in 1907. OTSAs are contained within the State of Oklahoma but may cross all other area boundaries.
- Tribal designated statistical areas (TDSAs) - areas identified and delineated for federally-recognized American Indian tribes that do not currently have an AIR or off-reservation trust land. A TDSA is intended to encompass a compact and contiguous area that contains a concentration of individuals who identify with the delineating federally-recognized American Indian tribe. TDSAs may cross State and all other area boundaries.
- State designated tribal statistical areas (SDTSAs) - areas identified and delineated for State-recognized tribes that are not federally-recognized and do not have an AIR or off-reservation trust land. SDTSAs provide State-recognized tribes without reservations statistical data for a geographic area that encompasses a substantial concentration of tribal members. SDTSAs must be defined within a single State but may cross county and other types of boundaries. SDTSAs were called State Designated American Indian Statistical Areas (SDAISAs) for Census 2000.

The AIAs are mutually exclusive, i.e., no AIA can overlap another AIA. In cases where more than one tribe claims jurisdiction over an area, the Census Bureau creates a joint-use area as a separate entity to define this area of dual claims.

Some NSDUH segments can cross more than one AIA. In order to assign a single AIA to a segment, a 'majority' AIA variable was created by summing the total number of dwelling units within each of the AIAs within the segment and then assigning the AIA with the most dwelling units to that segment. The resulting 'majority' AIAs were summarized to form MAIIN002. MAIIN002 is based on 2000 census data.

SAMPLE WEIGHTING AND ESTIMATION VARS

SAMPLE WEIGHTING AND ESTIMATION VARS

The following variable, AWTC10_C, was developed to assess the effect of using weights developed using 2010 Census-based versus the 2000 Census-based population estimates as control totals on 2010 substance use and mental health estimates. The 2010 population estimates used in the poststratification of ANALWT for 2010 were based on the 2000 Census, while the 2011 population estimates used in developing ANALWT for 2011 are based on the 2010 Census. The 2010 population estimates used in the poststratification of AWTC10_C (for use in the analysis of 2010 NSDUH data) are based on the 2010 Census, and it is the product of YR10WT1*...*YR10WT13*WT14_C10*YR10WT15. Note that AWTC10_C has the same weight components as ANALWT except the person level post-stratification adjustment factor (the 14th component), i.e. WT14_C10. AWTC10_C was not used to produce the official 2010 estimates; ANALWT was used for that purpose. The decennial census effect results using AWTC10_C can be found in Appendix B of the 2011 National Findings Report.

AWTC10_C Len : 8 2010 ANALWT POSTSTRATIFIED TO 2010 CENSUS TOTALS

The following variable, MHSAWT_C, is a weight variable created for mental health analysis for adult Sample A or Sample B. A separate post-stratification was done for both Sample A and Sample B so that the weights for each of the sub-samples were controlled to the Census population estimates for the civilian non-institutional population aged 18+. MHSAWT_C is set to zero for youths aged 12-17 and the 8 adults not assigned to either portion of the split sample. MHSAWT_C can be used for generating adult mental health estimates using Sample A data, or using Sample B data, separately. However, if mental health estimates are generated using both Sample A and Sample B combined data then ANALWT_C should be used.

MHSAWT_C Len : 12 MENTAL HEALTH ADULT SPLIT SAMPLE WEIGHT

The following variable, SPDWT_C, is a weight variable created for Serious Psychological Distress (SPD) analysis for adult Sample A or Sample B. A separate poststratification adjustment was done for both Sample A and Sample B so that the weights for both subsamples were controlled to the Census population estimates for the civilian noninstitutional population aged 18+. SPDWT_C is set to zero for youths aged 12-17 and 6 adults not assigned to either portion of the split sample. SPDWT_C can be used for generating SPD estimates using Sample A data, or using Sample B data. However, if SPD estimates are generated using both Sample A and Sample B combined data then ANALWT_C should be used. SPDWT_C can also be used for producing adult depression estimates for Sample B.

NOTE: For specific details of defining SPD, please refer to the Recoded Adult Mental Health: Serious Psychological Distress Variable Documentation Appendix.

SPDWT_C Len : 12 ANALYSIS WEIGHTS FOR SPD ESTIMATES

The following variable, DEPWT_C, has been created to allow estimates for both the Youth and Adult Depression data to be generated in one analysis. This is accomplished by combining into one variable the final person level analysis weight (ANALWT_C) for youths aged 12-17 and the split sample weight (SPDWT_C) for adults aged 18+ in Sample B, and assigning a weight of zero for adults 18+ not in Sample B. Adult Depression is only available for respondents in Sample B (ADLTSAMP=2).

Specifically:

DEPWT_C=ANALWT_C when 1<=AGE2<=6

DEPWT_C=SPDWT_C when AGE2>=7 and ADLTSAMP=2

DEPWT_C=0 when AGE2>=7 and ADLTSAMP not 2.
