

# New and Corrected Data Since Last Release

December 2023

A number of variables have been added to the 2021 Public Use Data File and Codebook since the previous release on October 14, 2022 ([Table 1](#)).

**Table 1. Variables Added to the 2021 Public Use Data File and Codebook**

The variables shown in [Table 2](#) were updated in the 2021 public use data file for various reasons. For YEPVNTYR, some respondents who were previously coded as level 99 (LEGITIMATE SKIP) were coded as level 98 [BLANK (NO ANSWER)] in the updated version. For YMDERSUD5ANY, some adult respondents had values of YMDERSUD5ANY=1 (Yes) replaced with a SAS missing value (Aged 18+/Unknown MDE) on the updated file. For HTINCHE2, some respondents who previously had a value corresponding to a valid height or to 985 (BAD DATA) were coded as either 994 or 997 (DON'T KNOW or REFUSED) in the updated version. Because BMI2 was created using HTINCHE2, those same respondents had their value of BMI2 set to SAS missing (Unknown). In addition, a subset of those respondents who previously had a code of 9985 (BAD DATA) for WTPOUND2 were assigned a value corresponding to a valid weight in the updated version.
